This Issue in Brief

The second installment of a series of articles on self-help activities among the unemployed begins on page 717. These articles are the result of a field survey by the Bureau of Labor Statistics covering a number of communities where self-help activities have been undertaken, with varying degrees of success.

Accidents in manufacturing industries decreased in both frequency and severity in 1931 as compared with 1930, according to the annual survey by the Bureau of Labor Statistics, frequency rates declining 18.3 per cent and severity rates 8.2 per cent. In 1931 an average of 18.85 workers were injured for every 1,000,000 man-hours worked, resulting in a loss of 2.59 working days for every 1,000 man-hours worked. Page 780.

Hourly earnings of male workers in semivitreous-ware pottery factories averaged 53.5 cents in 1932 as compared with 70.5 cents in 1925, the date of the last previous survey made by the Bureau of Labor Statistics of wages and hours of labor in the pottery industry. In vitreous-ware factories, earnings were 54.6 cents in 1932 against 63.8 cents in 1925. Daily earnings in semivitreous-ware factories averaged \$4.13 in 1932 and \$5.70 in 1925 and in vitreous-ware factories, \$3.94 in 1932 and \$5.25 in 1925. Female workers in semivitreous-ware factories averaged 29.2 cents per hour and \$2.25 per day in 1932 as compared with 38.5 cents per hour and \$2.99 per day in 1925; in vitreous-ware factories their average earnings were 26.4 cents per hour and \$1.90 per day in 1932 and 32.9 cents per hour and \$2.55 per day in 1925. The hours worked in a two-week period, for males and females combined, averaged 57.6 in 1932 as against 72.5 in 1925 in semivitreous-ware factories, and 43.7 in 1932 as against 81.1 in 1925 in vitreous-ware factories. Page 853.

A cooperative farm plan organized in the spring of 1932 by the B. F. Goodrich Co., Akron, Ohio, assisted many former employees of the company as well as those working on part time to provide adequate subsistence for themselves and their families throughout the summer and a large part of the winter months. About 200 acres of land suitable for the raising of vegetables were under cultivation and a total of 936 men shared in the distribution of vegetables. The undertaking was in general so successful that the company plans to sponsor a similar garden program in 1933. Page 771.

The board of reference, appointed November 3, 1932, in the wage controversy between the United Mine Workers of America and the anthracite operators failed to agree, and individual reports were made on March 1, 1933, by the two members of the board. Extracts from the two reports are given in an article on page 815.

A recent study of the hazards to which women are exposed in vitreous enameling in the stove industry, made by the United States Women's Bureau, showed that the industry is one in which a relatively large number of women are exposed to lead poisoning. The majority of the women in the industry are employed either in spraying the enamel on sheet or cast iron, or as brushers in removing the excess enamel

after it has dried. The brushers were employed chiefly on sheet iron, on which a leadless enamel is used, and the sprayers on cast iron, which is covered with lead enamel. Page 789.

The serious effects of the prolonged industrial depression are indicated by the findings of a survey conducted in Philadelphia in May, 1932, by the research department of the Wharton School of Finance and Commerce, University of Pennsylvania. According to an estimate based on these findings, approximately 48,000 families in the city at that time did not have enough food to prevent actual hunger. It is also estimated that about 39,500 families had members who had no shoes or lacked other items of clothing essential for bodily comfort, and that 90,695 families had spent all their savings. Page 774.

An extremely low death rate was reached in 1932 among the several million industrial policyholders of the Metropolitan Life Insurance Co., in spite of the unfavorable economic conditions which prevailed throughout the year and which seriously affected the living standards of industrial workers and their dependents. The favorable record for the year is attributed to various factors such as the lack of any widespread epidemic, until influenza became prevalent toward the last of the year, and the effective functioning of health departments and clinics and the well-organized relief work. However, warning is given in the report of the adverse effects which may be expected if the radical curtailment in appropriations for these agencies, which is now taking place, is continued. Page 786.

The cost of the family budget in Canada, as published by the Canadian Department of Labor, has declined 27.6 per cent during the present depression, totaling only \$16.01 in December, 1932, as compared with \$22.11 in December, 1929. The shrinkage in the cost of food during this period is even more striking—from \$11.83 to \$7.04, or 40.5 per cent. The rent for a quarter of a month showed a reduction from \$6.98 to \$5.99, or 14.2 per cent. Clothing is not included in the budget. Page 965.

Self-Help Activities of Unemployed in Los Angeles¹

IN THE Los Angeles region the cooperative self-help activities of the unemployed are of two types: (1) Those limited to the exchange of the labor of the members for surplus commodities of all sorts, to be used by the whole group; and (2) those whose purpose is the promotion of the barter system—the exchange of one commodity for another between individual members, or between a member and the organization.

In the first type all work is done for the organization, not for the account of any individual member, and the distribution of the surplus commodities so obtained takes place on the basis of need, not on the basis of remuneration for work performed. In the second type each member is working for himself; any articles brought in by him or any hours of labor performed go to his credit on the books. In the first class of organization it is evident that no medium of exchange or currency is necessary; in the second, scrip or some evidence of credit must be used.

To be a member of the first type of association practically the only requirement is that the person be partially or wholly unemployed. No dues or fees are required and there are no paid officers or employees. The only condition is that, to be eligible to receive supplies from the association, the member must perform a minimum period of service for the association, usually two days a week.

Both individuals and firms are accepted for membership in the second class of organization; a membership fee is generally required; and a certain amount of cash is usually necessary in order to utilize the services available through the organization. In all of these organizations there is a staff of employees, all of whom are paid in credits of the association.

The exemplar of the first class is the Unemployed Cooperative Relief Association, a federation of some 45 local "units," as they are called, in Los Angeles County. There are in addition nearly as many independent relief associations not yet affiliated with this organization. The movement is growing so rapidly that no one can speak with certainty, but it is estimated that in southern California from 125,000 to 150,000 persons are dependent upon this relief movement which is being carried on by the unemployed themselves. The present study was confined to the federation and its units.

In the second class four exchanges, whose registered membership numbers about 7,600 persons and firms, were studied. Of these the Los Angeles Cooperative Exchange, with 5,600 members, is by far the largest.

¹ This is the second series of articles on self-help activities, the first having appeared in the March issue of the Monthly Labor Review.

Unemployed Cooperative Relief Association

THE beginning of this association dates from the spring of 1932, when an unemployed veteran in Compton, a suburb of Los Angeles, conceived the idea of going out into the country to see if he could perform service for some farmer in exchange for vegetables. He found one who employed him at pulling weeds and gave him at the end of the day a sackful of vegetables to take home. The amount being more than his family could use, he gave some to his neighbor. The next day the neighbor accompanied him. After several days a number of others joined these two, walking out to the country and returning with the produce on their backs. This attracted the attention of a local mover and he offered the use of a truck and, later, of part of his warehouse as a distributing center for the produce.

At the end of two months an informal organization was formed, with the mover above mentioned as manager, and in a short while this organization had some 500 families in membership. From this point onward the movement grew very rapidly. Other localities heard what was being done in Compton and sent men to find out how to start similar working groups; each of these not only received advice but went home with tangible evidence of what could be obtained by group action—a sack of vegetables or whatever else was available.

During the time since this first unit was formed many hundred thousand tons of vegetables and fruit have been gathered and salvaged for the use of the unemployed and their families which otherwise would have gone to waste.

To such an extent has the movement grown that by March, 1933, there were 45 units of unemployed in Los Angeles County (some 23 in the city itself). These units are affiliated in the Unemployed Cooperative Relief Association. There are also about as many independent units working along similar lines but not affiliated with the association. Altogether there are said to be 103 such organizations in Southern California.

Progress of Association

Food.—The association has been eminently successful in obtaining vegetables. Situated as it is in a section of the country in which crops are available nearly the entire year, the association has been able to make contacts which have brought in an ample supply of all kinds of fruits and vegetables except potatoes. The latter are only a summer crop in this section and the units have resorted to various means to obtain supplies for the winter. In some cases a unit has been able to exchange oranges for the surplus potatoes of a northern unit; in other cases the public authorities have supplied funds for their purchase.

Staple groceries are also very difficult to obtain, as there are few ways in which they can be obtained in sufficient quantities through the labor of the members, which is the only purchasing power of the association. The city units of the association have been assisted in this respect by an agreement signed January 24, 1933, with the local public welfare department by which \$6,000 was made available to the association for the purchase of groceries to be distributed to the city units through the warehouse of the association's county council. This money has been used to buy, at wholesale prices, bread, cereal, salad and cooking oils, coffee, sugar,

potatoes, flour, yeast, and soap. These have been issued to the various units in amounts varying according to their membership, and each family could draw its supplies from the unit once a week. Every cent of this sum went for actual supplies, since, all services being donated, there was no overhead expense involved.

The money so furnished was all spent by the end of February, and the value of the services rendered by the association was recognized when the city made an additional appropriation of \$10,000 (for the city units), which was matched by Los Angeles County by a similar amount for the county units outside the city. The use of the funds, however, was delayed by the bank holiday, which prevented the money being obtained.

Exasperated by the spectacle of milk and other food supplies of various sorts being thrown away while at the same time there were people in dire need of these supplies, the association and certain influential friends brought the matter to public attention, the result being that a food administration office was set up with the duty of seeing that no food is wasted. Milk (whole and skimmed) not sold is turned over to the association, as are also fruit and vegetables in transit or in storage which are in danger of spoiling and are condemned by the health department. In this way, much usable food is salvaged that would otherwise go to waste.

Two bakeries run by the association supply the major part of the bread distributed to the members; these use Red Cross flour obtained by individual members, but they have never been able to obtain sugar in the amount called for by the recipe. Much canning of fruits and vegetables has been done by individual units and hundreds of barrels of sauerkraut have been made.

Some idea of the service rendered by the association is given by figures published by the Los Angeles County Food Administration for September, 1932. These showed that during that month the 44 units distributed 4,730,700 pounds of produce to 24,716 families (107,136 persons), at a total cost (gasoline and oil only) of \$2,588.

Transport and communication.—Gasoline has been characterized as the lifeblood of the unemployed relief movement. Without gasoline for the trucks which bring in the supplies the relief work is paralyzed. In the early days of the movement many thousands of gallons were donated but these donations gradually fell off, while at the same time the requirements grew rapidly as the movement expanded. Some of the leaders used their own credit to obtain the gasoline that was necessary if the crops were to be gathered before they spoiled. Finally, the emergency was recognized by the local public authorities, which now, on the basis of mileage and of tonnage of supplies handled, furnish a sufficient amount of gasoline and motor oil to keep the trucks moving. The local traffic court also is assisting in the solution of the transportation problem by requiring traffic offenders who lack cash with which to pay their fines to put themselves and their machines at the disposal of the association for the term of their sentence. When their time is served, the fact is certified by the manager of the unit to which they have been assigned and this certification, presented to the court, serves as a release for the offender.

The association has been attempting to make arrangements with the State authorities at Sacramento for free license plates for the trucks used in the relief work.

The association is setting up a system of short-wave radio transmission, having obtained an amateur's license therefor, and through this the crop conditions and surpluses of one section will be made known to other sections and exchange of goods can be arranged for without loss of time and without expenditure for long-distance telephone or telegraph.

Housing.—Housing has been one of the directions in which comparatively little success has been attained. One of the leaders of the movement states that the organization has been able to provide quarters for only about 20 per cent of the families evicted. A plan is now being worked out which it is hoped will be more successful.

Supplies furnished in relation to total budget.—It is seen that those items of the budget which the association can not supply must be obtained by the member from the proceeds of whatever outside paid work he can find. He has, however, plenty of time to look for work, as most of the units require his services for two days a week or less. (Figures kept for a period of 90 days showed that one man by 8 hours' labor could bring in supplies sufficient for 22 persons for one week.)

Money received by Los Angeles County from the Reconstruction Finance Corporation is being used to provide work on flood control, park clean-up, and other projects, and the work so furnished is helping to ease the employment situation. Men registered with the various units of the Unemployed Cooperative Relief Association are being given work, 10 days each, in rotation. The money so earned, with what the men are able to earn on casual jobs here and there, helps to provide some of the necessities which the association has thus far been unable to furnish.

The association estimates that in general the food supplies issued through its warehouses represent about 70 per cent of the normal requirements of a well-balanced diet. Meat, however, can be secured only occasionally and then not in sufficient quantities; butter also is absent from the list of supplies; and, as already noted, certain staples such as sugar, coffee, etc., are available only in small quantities.

Although nominally the association functions as a whole, in reality the supplies and services obtainable vary considerably from unit to unit. Food—milk, vegetables, fruit, and a certain amount of staple groceries—is available at every unit; the older and more aggressive locals, however, furnish a considerably larger variety of other services than the newer units. The majority of the locals operate kitchens at which are fed the single members and the members who are donating their time. Most of them also collect and distribute used clothing, hats, and shoes, and a considerable number also have a shoe-repair service.

Each unit has its warehouse and certain of these also serve as district warehouses through which exchanges of surpluses are made between units. There is also a wholesale, or county, warehouse, through which pass the goods received through the local food administration and those purchased with the \$6,000 city appropriation.

Income.—No fees of any kind are charged and it is part of the code of the organization that no commodity coming into its possession may be sold for cash, as it would thus compete with local dealers. The aim of the association is to care for that section of the consuming public which has little or no cash; persons with cash are expected to spend it through the ordinary channels of trade.

It is evident, however, that a certain amount of cash is required to meet the association's expenses for telephone, stamps, etc. This is obtained in various ways by the different locals. Some give paid entertainments; some utilize the labor of their members in shelling walnuts for a local growers' association at a fixed cash rate; some collect the caps of ginger-ale bottles at a cent apiece; some collect and sell old newspapers, etc.

Loyalty of members.—The only remuneration, from the chairman down to the sorters of vegetables, is the right to draw food supplies from the association, the amount being regulated by the number of dependents, and this right is contingent upon the member's donating the required amount of time to the association each week.

There are occasional cases of exploitation of the association by unworthy members but these, it is reported, do not last long. Each unit has its own corps of investigators whose business it is to see that the condition of need is what the member applying for other assistance than food represents it to be.

The movement, in fact, seems to have succeeded in obtaining from its members, and above all from its officials, a marked devotion. Each person connected with the movement with whom conversation was held seems convinced that his or her job is the keystone of the arch without which the whole edifice would collapse.

Organization

THE association has never been incorporated, and has never tried to operate along hard and fast lines. In the course of its existence, however, it has held firmly to five guiding principles—that it shall be nonprofit-making, nonsectarian, nonpolitical, without dues, and without salaried officials.

Under the present arrangement each local unit is practically autonomous, having its own by-laws (modeled on those of the central organization but modified to cover any special local conditions it may have to meet) and determining to a considerable extent its local policies. Each unit has three representatives on the county council of the association covering Los Angeles County. There is also a loose State organization which has already held several meetings.

The by-laws provide that general meetings shall be held at least twice a month. Meetings of delegates to the county council are held every Friday afternoon, each unit being entitled to representation by its manager and two other members. At these meetings all matters of general policy are thrashed out and few acts of the officials go unexamined.

Each unit elects an executive board of seven for a term of three months. This board meets once a week. The officers of the unit are elected by and from the executive board. Officers and directors can be removed by general vote on charges made in writing by three members.

The by-laws provide for the appointment of three trustees every six months to audit the accounts of the unit. Some units, however, have their books audited by a public accountant.

The term of office of the manager varies in the different units. Some elect a new manager every three months, some every six months. The manager is entitled to appoint his assistants.

Recently a large general committee has been set up, called the citizens' committee, composed of prominent Los Angeles business and professional men; these men will give the association the benefit of their experience in an advisory capacity.

Basis of Operation

THE underlying principle on which the association operates is that of the need of the individual.

The new member joins, receives his membership card, and is at once entitled to begin drawing his ration of foodstuffs. In return he is usually expected to contribute at least two days' work a week to the association. A test of the altruism of the membership lies in the fact that the married man with a family of, say, five, who works his two days is entitled to draw supplies for the whole family, while the bachelor donating the same amount of labor draws only for himself.

There is no such thing as "credits" for work done in this organization. If the organization has an opportunity to renovate a house in return for a lease thereon, a set of carpenters, painters, plasterers, etc., may work every day for a week on the job, but they do not thereby accumulate credit for time put in; they are merely regarded as fulfilling their obligation to the group.

There is no exchange of commodities between the individual members of this group. Clothing, shoes, furniture, and any other articles of necessity are collected wherever available, but once obtained they become the property of the group and subject to requisition by any member needing them. Such being the basis of operation, there is no need for any scrip or medium of exchange.

As already stated, each local unit is in many respects independent. Where group action or representation is necessary the county council of the association acts. Supplies such as gasoline and motor oil coming into the central organization are distributed among the locals on a pro-rata basis.

While there is no regularly established employment office, the central organization or any local will act as such. Each new member is required to register his occupation as he enters, and the organization is therefore in a position to supply immediately nearly any kind of labor desired. In such cases the man, qualified for the work, whose needs and responsibilities are greatest is given the preference. In such cases the man sets his own scale of pay; the association has no voice in the matter.

On jobs, however, for which the association contracts on an exchange basis, the labor time of the men is figured at the highest current rate (i. e., the union scale), as the association does not desire to lower the standards of wages or working conditions in the community.

As a large proportion of the present locals were started before the formation of the central association, each operated for a time as an independent organization, and the methods and practices adopted were in many cases continued after the federation took place. The result is that there is some variation from local to local, especially in the labor requirements imposed upon the members and in the procedure for the distribution of the supplies. Again, as even at present there is practical autonomy of the units, the progress made by the various units depends almost entirely on the energy and initiative of the members and leaders of the individual local.

Since it is in the locals that the practical relief work is being carried on it has been thought advisable to describe the methods, operation, and achievements of some of the older and more advanced locals.

Local Unit No. 1

LOCAL UNIT No. 1 is situated in Compton, and as already stated is the oldest of the units in Los Angeles County. It has some 500 active members, representing practically all the trades and professions.

Services Supplied

This unit has been very successful in the provision of services for its members. It occupies a large 1-story building which was formerly a soap factory but which had stood vacant for several years before coming into the possession of the association, and is managed by a man who carries on his own trucking and moving business in conjunction with the work of the association. The offices are in one corner and back of them is the kitchen where the working members (from 100 to 150 each day) are given their noonday meal. The supply warehouse occupies the rear left of the building and here are huge bins, wire-partitioned compartments, refrigerator boxes to hold perishables and fish—all built from salvaged lumber and materials by the members. This warehouse serves also as a district distributing center and it is no unusual thing for it to handle as many as 100 tons of produce in a day. "Contact men" are busy scouring the countryside and city for supplies which may be secured for labor. Most of the truck farming in the Compton section is carried on by Japanese and Chinese farmers. Considerable success has been attained by the association in obtaining from them contracts by which the men assist in preparing the fields, in digging the irrigation ditches necessary in the farming of this section, and in cultivating and harvesting the crops. For their labor they receive the unsalable produce (culls, seconds, etc.) and perhaps a certain percentage of the best grade.

Such produce, when obtained, is brought to the warehouse where some of the older men who are not physically able to work in the fields pick it over and clean it for issue to the families. At the time of the agent's visit 10 or 15 of these men were sorting a consignment of many cases of partially spoiled apples sent to the unit by the local food administration office, salvaging and washing the good fruit. The spoiled fruit was to be used to make vinegar.

Across the building several men were repairing pieces of furniture which would then be sent to the furniture warehouse of the association several blocks away. A balcony was being built on which will be installed a short-wave radio set which will bring Compton into the association's chain of stations. At the right of the building at the front members were lining up to receive flour.

A block or two away, on land whose use is donated by the railroad company, a gasoline filling station has been erected from brick salvaged on a wrecking job and here a 10,000-gallon tank has been sunk. At this station are issued the gasoline and oil used in the transportation trucks (the amount used has run as high as 300 gallons a day at the height of the harvest season) as well as that issued, in

very limited amounts, for the personal conveyance of the workers from home to the office. This gasoline is obtained partly from donations, partly by purchases from the "petty fund" of the unit, and partly from the local food administration. This station serves no patrons outside the association.

At other points are the milk station where milk is issued at 3 o'clock every day, the furniture warehouse, and the department of which the unit is especially proud—the sewing department. In the last-named department the slogan of the association—utilization of all waste—is carried out to the letter.

From a local upholstery shop are received scraps and waste pieces of tapestry, denim, and other materials. One woman cuts these into blocks, shearing off all the jagged ends, another stitches them together, forming the top for a quilt. Other heavy material is used for the lining and as the two thicknesses together are sufficiently heavy for use in this climate they are quilted on a frame by other women and the result is an attractive piece of bedding. These quilts and the work shirts manufactured here are premium pieces, for which the demand is far greater than the supply. The shirts are made from cement sacks, and from the heavy linen (formerly discarded) used to back up the crude rubber during the manufacture of automobile tires. Under the fingers of the seamstresses of the unit these materials are now being turned into work shirts with excellent wearing qualities.

The towel and coat supply companies send the unit the white coats, used in restaurants and at lunch counters, which have become too shabby for use. These are renovated, where possible, for use by the unit's men who are handling the milk, fish, and other foodstuffs; if a coat is too worn to permit of repair it is cut up into pieces for use in making quilts.

There are many hundreds of garments in stock here—dresses, coats, trousers, a few children's clothes, caps, hats, etc.—all neatly piled in stacks or hung on racks. All of these have been fumigated, cleaned, mended and pressed, and are now available for issue as needed.

In connection with this department is a shoe-repair shop which shows considerable ingenuity in the materials it has been able to use in the repair work. Lacking shoe leather, it obtains from industrial establishments the worn belting from their machinery.

Other services available through the unit are barber service, automobile repair (though available to members for personal cars only after the repair of the business vehicles has been taken care of), fuel supply, and medical and social service.

The constructive part being played by the organization in caring for cases of distress, the burdens of which would otherwise have fallen upon the city, has been recognized by the officials and the business and professional men of Compton. The local physicians have agreed to treat free all the cases sent to them by the unit. It is understood that the patient will be referred to the physician he had in the days when he was able to pay for service; if he had never had a regular physician the doctor next in line in the alphabetical list is selected. During the short time the bureau's agent was at this unit several cases were attended to. One of these was a young woman (whose husband was unemployed) expecting her second child. The woman in charge of the unit's social-service and health-service work—a calm, motherly woman with grown children of her own—made arrangements for a

physician, for an ambulance when needed, and for an outfit of baby clothes when the mother was ready to leave the hospital.

This woman employee is also doing considerable work in the homes of the members and even in those outside the membership which are referred to her by their friends or neighbors. She states that one of the big problems they have had to meet in childbirth cases has been that through pride the parents have put off coming to the association as long as they could—too long in some cases—with the result of an extreme prenatal undernourishment of the child which has seriously handicapped it.

Procedure for Drawing Supplies

This unit rigorously enforces the principle of the association, that "he who works not eats not." The card carried by each member shows in parallel columns the amount of food supplies drawn and the amount of labor performed each day. This is an instant and automatic check on the slackers. Although required to donate only two days' work, each man not otherwise employed is expected to report at the office every day.

As far as possible the training and aptitude of the man are taken into consideration in assigning the work. Certain members have permanent assignments. Others go from job to job, doing whatever is at hand to be done.

In the early days of the association it frequently happened that members would put in an appearance after the field and other work gangs had been made up for the day, remark innocently that it was too bad they had arrived after the day's arrangements had been made, and return home feeling that they had done all that could be required, but expecting to draw their rations like all the others. This situation has been met by the obtaining of a wood lot where salvaged logs and wood, of whatever kind, is cut up into fuel wood. This is reserved as sort of a "knitting job." Anyone not otherwise assigned is sent here and it is never too late in the day to begin and to put in eight hours' work. At the time of the agent's visit several men were engaged in setting up a saw run by motor, with which to cut the enormous pile of wood salvaged from a ship that had burned in the harbor.

Supplies of vegetables and other foodstuffs can be obtained on presentation of the card mentioned above. For other supplies such as clothing, shoes, furniture, etc., an order must be obtained from the office. When the furniture department was located in the main building those who happened to be on the spot when a piece of furniture arrived would immediately put in a request for it, although it was quite possible that there were many others in the organization whose need was greater. The furniture department was therefore removed to a location several blocks away, and the pieces received never come into the main building but go directly to the warehouse. The result of this has been that requests are received generally only when and for pieces for which there is genuine need. However, to make sure of the latter, all requests of this sort are investigated. The association recognizes that its membership has not by any means attained the ideal state of true unselfishness, and it therefore has several members who act as investigators to see that the home conditions and need are

as represented. This is done to prevent exploitation of the unit and to prevent worthy members from being thus deprived of what they really need. If the need appears to be genuine a requisition (made out in duplicate) is issued, and this the member presents to the custodian of the furniture warehouse and receives the article specified.

Amount of Commodities Handled

Records for each day, week, and month show in pounds the receipts of each kind of edible produce (bread, meat, dairy produce, etc.) and of nonedibles. In tabular form is shown for each department the number of men engaged, the hours of labor put in, and any explanatory comments deemed necessary. The report of this unit for the week February 5-11, 1933, showed that the receipts of produce (broccoli, cabbage, carrots, cauliflower, celery, green and dried onions, oranges, mustard greens, parsnips, radishes, turnips, spinach, and other vegetables) totaled 52,918 pounds. Other food received that week included 3,073 pounds of bread, 1,832 pounds of meat, fish, and soup bones, 26,320 pounds of dairy products (milk, cottage cheese, and cream cheese), 10 pounds of tobacco, 48 pounds of canned milk, and 4 pounds of coffee. The last item represents one of the problems as yet unsolved by the unit—how to provide the staple groceries such as sugar, salt, lard, coffee, butter, etc. The \$10,000 appropriation (mentioned earlier in this article) made by Los Angeles County will, it is expected, enable the provision of some of these articles, but as yet no supplies have been received by the unit from this source. Up to the present, unless the member has been able to supply these commodities for himself, he has had to do without them.

Some idea of the activity of this unit is given by the fact that its operating report for February 5-11 showed that a daily average of 253 members together put in an average of 1,679 labor hours per day every day that week. Among the things accomplished were 100 hair cuts given, 41 carpentry jobs completed, 23 automobile-repair jobs done, 821 noonday lunches served, more than 21,000 pounds of milk collected and distributed, 65 medical and social cases handled, 83 pairs of shoes repaired, 62 loads of wood cut (57 loads delivered to families), and 485 "contacts" made for additional work to be done. In that one week 554 families (2,324 persons) received assistance of some kind through this unit.

Funds

Until March 1, 1933, the policy in this unit as regards outside paid employment had been that what each man earned in this way belonged to him. This was changed at a meeting of the members on February 28. At that meeting it was decided that a man sent to an outside paid job should have the option of paying in to the association 10 per cent of all his earnings on that job and continuing to hold his ration card, or of retaining all his earnings and forfeiting his ration card during the period of his employment. On short jobs of a few hours' duration men are to be assigned from the roll in rotation, but all earnings go into the unit's funds.

This new procedure, it is expected, will not only correct a situation that has been abused by some, but will result in swelling the cash funds of the unit and in easing some of the difficulties heretofore experienced because of the lack of money.

No cash is handled by the officers of the association. By an arrangement with one of the local banks all income is turned over to it and each check drawn upon these funds contains space for an itemization of the purposes for which drawn; it must bear the manager's signature and be countersigned by a designated official of the bank. This procedure acts as a check on any misuse of funds.

This unit has abolished the regular membership meetings. Meetings are held only when some definite business is to be transacted. To provide a medium of expression and information not only for the members but for the general public of Compton, a monthly paper has been started whose first issue appeared in February, 1933. The typesetting is done in the trade classes of Compton Junior College.

Local Unit No. 3

THIS local, situated in Huntington Park, a suburb of Los Angeles, is on a somewhat different basis from the others visited, since it works in conjunction with the Salvation Army, the Huntington Park Social Welfare Association, and the local Red Cross chapter. All of these associations are under the same roof as the Unemployed Cooperative Relief Association unit.

Local No. 3 operates very simply. Its office force consists of three persons who handle the registrations, work orders, and general records for the membership of some 2,000 persons. Each new member fills out a card showing his name, address, physical condition, age, citizenship status, dependents, what languages he speaks, period unemployed, race or color, trade or profession, and experience therein, what work he is willing to accept, and the extent of his need. Card indexes made therefrom list the men by occupation.

Each member is required to give 10 hours' work per week to the association. For each member a current record card is made showing by days the number of hours actually worked for the unit. Each time any supplies are drawn by him a notation is made, and if the required labor has not been performed no further supplies are issued to him until the labor time is made up.

The association runs a fruit and vegetable commissary and a kitchen in which the members who are working for the association are fed at noon.

During the month of January, the report of the unit shows that it received 171,435 pounds of vegetables and fruit for distribution; for this 2,299 man-days of labor of 8 hours each were performed. These supplies were distributed to 3,116 families, having a total of 11,215 persons. In addition 2,192 meals were served on the premises.

On the premises, but under the direction of the Salvation Army, are a barber shop, shoe-repair shop, and bakery. There is also a sewing room, under the direction of the Red Cross; in this room the women of the unit clean and renovate the clothing brought in and make garments from materials furnished by the Red Cross. Orders for Red Cross flour are also issued by its office in the building, and are filled at a counter near the commissary. The Social Welfare Association uses its funds to supply staple groceries. All of the labor used in the operation of these various departments is supplied by the Unemployed Cooperative Relief Association.

The issue of supplies is regulated in the following way: To obtain bread the member goes to the Red Cross office and obtains an order

entitling him to from one to several sacks of flour per month (depending on the number of his dependents). This he may use to make his own bread at home or he may turn the flour in at the bakery in the building, receiving in exchange a card entitling him to as many loaves of bread as the supply of flour he brought in will make. As he obtains each loaf a number is punched out on the card. Persons obtaining staple groceries from the welfare association receive an order from that office for an amount varying according to their need; the store of supplies available, however, varies considerably from day to day, as supplies can be bought only as the association has funds with which to purchase them. For barber service and shoe-repair work application is made to the Salvation Army representative on the premises.

The proceeds of any paid employment secured for a member by the unemployed relief unit belong to the member. It is the practice to send the men out in rotation as requests for labor are received, but in case of extreme need a man is sometimes sent in advance of his turn. Generally, the manager states, it requires from three to four weeks after a new member registers before he can expect to be eligible for a work order. The situation has recently been somewhat improved by the work made available on flood control, park work, and other projects through the Reconstruction Finance Corporation funds; the men on the register are being furnished, in turn, 10 days' work each.

Local Unit No. 9

THIS city local, as its number indicates, was among the earliest units to be formed. The report of its manager for the month of January, 1933, shows that on the last day of the month there were 1,164 members registered, representing 4,907 persons, or practically double the number at the middle of November, 1932. This local is housed in a large building, formerly a garage, in which all its activities are carried on.

The local operates not only a commissary from which food is issued to the families of members for preparation and consumption at home, but also a kitchen from which meals are served to the single members and to the members (married and single) who have been performing their required service for the organization during the day. Married people who on any day have been performing part of the two days' service required each week have the option of obtaining their meals that day at the kitchen or of drawing out their food ration to be eaten at home. During January this kitchen served 8,606 meals. Most of the equipment in the kitchen was either donated or loaned to the unit, though some was earned through service. The water and electricity are obtained free from the municipal plants, and the county pays the bill for the gas consumed.

During January 46,804 pounds of food were received at the warehouse of the unit, of which 39,551 pounds were issued to families of members and 6,119 pounds were used in the kitchen.

At the time of the agent's visit the long tables at which the meals are served were covered with walnuts which were being shelled by members of all ages, who were serving their two days in this way. The work is being done for the walnut growers' association, which pays 5 cents for every pound of nut meats, and thus the association is obtaining needed funds.

At one corner carpenter members were busy constructing a balcony, and steps leading thereto, where a sewing and repair department will be fitted up, in which the clothing received will be cleaned and repaired for use, after which it will be taken to the clothing department for issue to members needing it. The latter department has on hand many pairs of donated shoes most of which need some repairing to make them serviceable. The agents of the local are now negotiating with a local cobbler to do the work, furnishing the needed materials, in return for a building-construction job to be done for him. During January the unit received for salvage 110 pairs of shoes, 120 men's and women's suits, etc., and 300 miscellaneous articles of clothing.

One section of the building which is partitioned off is used as a storage and repair garage for the many trucks which, or the use of which, the unit has been able to obtain. This unit has been especially successful in making "contacts" in the citrous-fruit section and through exchange of service has been able to obtain many tons of cull oranges, perfectly good but unsalable and which would otherwise have gone to waste. The unit has been unable to use all of this fruit in its own group, and it has "swapped" with some of the other units for their surpluses of other articles.

This local and Local No. 26 are the joint owners of a bakery (located at the front of the premises of Local No. 9) which is now baking for 19 units in the city. On the day of the agent's visit this bakery had turned out 1,700 loaves of bread. Part of the bakery equipment has been donated, part bought with labor, and part is rented. The oven has been loaned by its inventor and manufacturer, who, business being poor and he having become greatly interested in what the association is doing, organized the bakery and has given his full time to it as superintendent for four months. Under his direction 12 or 14 of the members, who are bakers by trade, alternate in giving their two days (some considerably more, voluntarily) per week. The superintendent paid tribute to the conscientious and expert work of these men. "They couldn't work better if they were getting \$12 a day."

Although effort has been made to provide housing by the labor-exchange method, the leaders of the unit confess they have had little success thus far in winning over the owners of vacant property in the locality to their proposition—renovation in exchange for a lease.

The local tries to keep some 20 to 30 men acting as "contact agents," scouring the city and country for opportunities to perform labor in return for goods of various kinds. At present they are interviewing the farmers for opportunities in connection with the preparation of fields, spring planting, etc. In computing the value of the services furnished by the unit, of whatever sort, the current scale is taken as the basis of computation, as the association wishes to avoid any undercutting of standards. Thus on common-labor jobs the association rate of computation on exchange work is 40 cents an hour although plenty of laborers could be hired (for cash) in the vicinity for as low as 25 cents an hour.

Each member reporting for his required service is given a work slip bearing his name, his membership number, the number of his dependents, and the work to which he is assigned for the day. Possession of this card entitles him to take his meals that day at the kitchen of the unit. If he draws other supplies, such as shoes, clothing, etc., notation of the articles so drawn is made on the back of the slip. Once a week each household is entitled to draw a quantity (depending

on the size of the household) of the staple groceries being obtained through the use of the city grant.

For each member a monthly record, by days, is kept showing the amount of milk, bread, meat, vegetables, etc., drawn by him; it also shows the number of days worked.

Local Unit No. 33

THIS is one of the newer units. Located in Hollywood across the street from the Goldwyn and United Artists motion-picture studios as it is, some 80 per cent of its members are persons formerly connected in some capacity (but mainly as technicians) with the motion-picture industry. Curiously enough, however, its membership list of several thousands includes no actors.

The unit maintains as yet few services; these include a vegetable and grocery commissary, a barber shop, an art department, and a kitchen in which the men at work for the organization receive their noonday meal. The 12 or 15 persons who work full time in the unit receive three meals a day. The kitchen served 3,487 meals in February, 1933.

During the same month this unit issued to 1,142 families (with 3,661 family members) foodstuffs amounting to 37,295 pounds, in addition to 6,000 pound loaves of bread.

At the time of the agent's visit a number of artist members were busy in the art department making garden markers for which an order had been received.

This local requires each member to work for the organization 2 days of 8 hours each week. A simple record card showing in parallel columns for each week the number of days worked and the days on which a food ration has been drawn enables the unit to check on this point. Unlike the other units visited, this unit has found it easier to exchange labor for staple groceries than for vegetables.

The unit for a while maintained an employment service in connection with the labor department but discontinued it when the present manager took office. Under the present procedure no attempt is made to find employment for the members but any requests for paid labor received at the office are given attention and each man receiving a paid job in this way is expected to turn over his first two days' pay to the unit.

This unit has had considerable assistance, both financially and in the way of advice, from a local family welfare organization, the Assistance League of Southern California.

Cooperative Exchanges

THERE are several organizations operating in Los Angeles which fall in the class of the cooperative exchanges. These are nonstock associations which declare themselves to be "nonpolitical, nonsectarian, and nonprofit organizations to enable everyone to use his talents and skill to his material advantage." Four such organizations were covered in this study—the American Unit, Bellamy Cooperative Exchange, Los Angeles Cooperative Exchange, and New Era Cooperative Exchange.² The purpose of all of these is to facilitate the exchange of commodities and of services between members.

² These are not cooperative associations as ordinarily understood but are rather on the order of business men's associations for the promotion of business.

The associations range in size from about 150 to 5,600 members. All but the American Unit require the payment of a membership fee, ranging from \$1 in the Bellamy and Los Angeles exchanges to \$2.50 in the New Era; the Bellamy Exchange also requires dues of 20 cents per month.

The use of scrip in payment for labor is forbidden by the California law, but as some medium of exchange is necessary in the transactions these associations have adopted a system of transfer of credits. For each transaction a form³ resembling a bank check is filled out, crediting one party and debiting the other party. The amount is entered also, by the exchange office, on its books and on the pass books of the members involved.

To cover the cost of this bookkeeping and of locating new members and services the associations all make a charge varying from 1 per cent in the Bellamy to 10 per cent in the Los Angeles and New Era Exchanges. The Bellamy Exchange requires that its commission be paid in cash; the American Unit accepts its 2½ per cent commission in credits; and the Los Angeles and New Era associations take half in cash and half in credits.

The exchanges warn their members that they do not guarantee to supply any particular services on demand. They will, however, take the application and fill it as soon as possible. A list of members and services is available and it is up to the individual member to examine it for the services or commodities he can use. The American Unit does, however, have what it calls its "gold certificate," representing "certified credits." The association "guarantees the purchasing power of its certified credits for the purchase of merchandise manufactured or produced in the United States. In case the payee hereof can not purchase such merchandise the American Unit, upon request, will procure and sell to the payee hereof said merchandise or other merchandise of equal value." The New Era has a similar certificate which it calls a "certified trading order."

The Bellamy Exchange is the only one of the associations studied which makes provision for the redemption of its credits in cash. The others all provide that credits shall be redeemable only in goods or services, and the only guaranty is the good faith of the association and of the members. Should any of these other three associations fail or go out of business, the last holder of the credit would be left with it on his hands.

All of the associations pay their employees in credits only.

These exchange associations have recently been the subject of complaint by certain members who took the matter before the State labor commissioner, charging that they were unable to make use of their credits. The burden of complaint of most of these was that the most important item of the budget, food, is not included in the services offered by any of these exchanges in Los Angeles, except occasionally and in very limited quantities, although the Los Angeles Exchange does operate a restaurant. However, as above noted, none of the organizations guarantees that the member will be able to obtain any particular service or commodity. Although the commissioner investigated the exchanges both as to this charge and as to whether they were violating either the wage-payment or employment-agency laws,

³ Called variously "credit transfer," "voucher," "exchange check," etc.

no action was taken as the result of the investigation. The commissioner states, in a recent letter to this bureau, that his office will continue its supervision to insure that all the promises of the associations to their members are kept.

In order to show exactly how the exchange system is being worked out in the Los Angeles district a detailed description is given below of the Los Angeles Cooperative Exchange, which is the oldest and largest of the exchanges in this city. As regards the other associations only the characteristic features are described and the respects in which they vary from the Los Angeles Exchange are noted.

Los Angeles Cooperative Exchange

THE idea on which the Los Angeles Cooperative Exchange is based was conceived some 10 years ago when Mrs. Bessie Ball Mays, wishing to enter her daughter in a certain private school in Los Angeles but lacking funds because of the slump in real estate, the business in which she was engaged, worked out an arrangement with the principal of the school. The school owed a painting bill which it could not pay, but Mrs. Mays had a considerable supply of paint which the painter could use. So she made over the paint to him and with the credit slip received from him therefor paid for the tuition of her daughter. No money changed hands but the bill owed by the school was met, the painter received the amount of his bill in paint, and the young lady's schooling was paid for.

This exchange idea was then carried on in an experimental way in a very limited group consisting of Mrs. Mays and a few friends in professional lines (an artist, a dentist, a lawyer, and one or two others). The group gradually expanded until it grew to fairly considerable proportions. It labored under the disadvantage, however, that there was no one who could give the business the supervision it needed, so operations were suspended until August, 1931. By that time the need for some such system of exchange of services had become apparent, an accountant offered his services to the group, and the exchange idea was put into operation again.

As the public became more acquainted with the purpose of the organization, more and more persons joined, especially those of the professional classes. Since the fall of 1932 the membership has grown from 1,800 to 5,600.

Form of Organization

The Exchange is not incorporated. The organization has been run under the direction of five trustees who are responsible for its management. The heads of the various departments of the Exchange—contact, supply, art, store, accounting, etc.—have been under the supervision of the trustees.

A new arrangement has, however, just been effected. Under it, while the trustees remain in office, the actual carrying on of the business will be in the hands of a business manager and a board of management consisting of the heads of the departments. Matters of policy will be outlined by this management committee, submitted to the judgment of the whole group of Exchange employees at their regular Saturday afternoon meeting, and voted upon finally by the general meeting of members, held every Monday evening.

Membership.—There have been no restrictions whatever on membership. Any person is eligible to join, upon payment of a fee of \$1 and signing the following agreement:

It is specifically understood and agreed that in all transactions with the Los Angeles Cooperative Exchange, in the conveyance or selling of any property or interest to it, in the performance of any labor or services rendered for it or at its request, any form or manner of labor or services at any place, and for any purpose, person or corporation, or upon any structure or work, the seller, laborer, or other person granting to or performing any service will accept in exchange for such labor or service the credits of the Exchange with all and subject to all of conditions thereof, and the undersigned does hereby agree, and by signing this agreement doth waive any and all liens that he or she may have, and any and all rights to demand in any other manner or form and does agree to accept as payment in full and as the exclusive method of payment the said credits unless it is otherwise stipulated and agreed in writing signed by the Exchange under proper authority.

It is further agreed that the Exchange is not to be held responsible for verbal statements.

Employees.—Until February 18, 1933, the employees of the Exchange worked on a salary basis, being paid entirely in credits of the association. At that time, however, because of the fact that the overhead expense was much too high and an operating deficit had been incurred, the salaries were withdrawn and a new plan was adopted. Under this new plan the employees will work without pay, but if at the end of the month the books show a surplus that surplus will be divided among them, each one receiving his share in exchange credits.

Each employee will sign a waiver of his right to a regular salary until such time as the financial condition of the fund enables the resumption of salaries.

This new arrangement is expected to eliminate one source of dissatisfaction among the members—that the operating force, being on the spot and having drawing accounts, has had the first choice of any commodities coming into stock. It will also enable the association to appeal to the members to bring down their charges, as it is known that some are asking rates which are out of line with present-day rates and with those asked by others.

The association has always been under the disadvantage that since it can not fill all its workers' needs through the Exchange and since it pays no cash salaries, the workers must always be on the watch for paid outside employment. Thus it can never be sure from day to day just what employees will be on hand. This also means that the Exchange must utilize those who volunteer, and these may not always be the most desirable type for the work to be done nor the most efficient on the job.

It is expected and desired that the new basis of remuneration will result in a shrinkage of the force, as it is acknowledged that the office is overmanned.

Basis of Operation of Exchange

All exchanges, whether of services or of goods, must be arranged for through the office of the organization, and it is the rule of the association that both parties to a transaction must be members.

Each member of the Exchange is provided with a pass book somewhat like those issued by banks. On the left-hand page is entered the value of any commodities he may have drawn out or of services rendered to him; on the right-hand page are entered the credits for commodities brought in by him to the Exchange or labor performed.

The exchanges are effected through the medium of "credit transfers" somewhat resembling bank checks. These transfers, redeemable only in services or goods, are nonnegotiable, and are transferable only on the books of the Exchange. The association has a rule that such transfers must be turned in to the association within 30 days after issuance. This does not mean that the association would refuse to honor such credits after 30 days. The purpose of the rule is to induce the recipient of the transfer to bring his credits in to be entered on the books immediately instead of holding them until he gets ready to draw upon them.

The credit portion of each transaction is subject to a 10 per cent charge, of which 5 per cent must be paid in cash and 5 per cent is charged against the member's credit account. Each member must supply himself with stamps (issued in various denominations) purchased for cash from the Exchange. These he affixes, in the required amount, to the credit transfer in payment of the cash charge made by the Exchange; the other 5 per cent is made on the books when the credit transfer is turned in to the association.

The cash requirement was found necessary to enable the association to pay for those commodities and services for which it must pay cash.

For minor purchases made at the association's stores members are urged to provide themselves with merchandise cards. These are charged to the member's account when bought; and the amount of each purchase is punched on the card as made, until the full face value of the card has been used.

The Exchange's commission is collected only on the credit part of any transaction. Thus if service is rendered on the basis of half cash, half credit, the association receives no remuneration for the cash involved. Its commission is imposed only to cover the cost of the bookkeeping and other service involved in keeping track of the credit account of the member; cash arrangements, of course, entail no such service.

During the 17 months' operations of the Exchange a credit business amounting to \$26,000 has been done. It is probable that were the cash business to be included also the amount would be doubled.

Services.—In an individual instance the system would work as follows: A member performs service or brings in goods to the association valued at \$50. For this he receives credit on the books of the association and on his pass book. Suppose a few days later he requires the services of a nurse. He calls the Exchange and is furnished the names and addresses of several nurses. From that point onward the transaction becomes a matter of individual bargaining between the parties. The prospective employer talks over the conditions with the persons whose names have been furnished him and hires the one whose terms suit him best. The nurse agrees to work for, say, \$25 a week, \$10 of which is to be paid in cash and \$15 in credits. At the end of the week the employer pays the \$10 in money and fills out in the name of the nurse a credit transfer, crediting \$15 to the account of the latter and debiting his own account \$15 plus 5 per cent of that amount (to cover the credit half of the 10 per cent commission), and affixes in the space provided 75 cents in stamps (the cash half of the commission). The employee is also interested in making sure that

the stamps are affixed, as no credit transfer is honored unless bearing the stamps. As a result of the transaction, the credit account of the employer (\$50) is reduced by \$15.75, while that of the employee is increased by \$15.

In one case a woman member wanted her house painted. After talking to several painters whose names had been supplied her, she came to terms with one who agreed to do the job for \$150 including the paint. He was unable to buy the paint himself, lacking the cash, but was able to arrange for her 4 months' credit with a paint dealer. The paint cost \$50. Of the remaining \$100 he agreed to take \$75 in Exchange credits and only \$25 in cash. On the transaction the Exchange received \$2.50 as commission.

As already noted, the ability of the parties to bargain plays a considerable part in the satisfaction or value received for the credits of the Exchange. According to an official of the Exchange, there have been instances in which the services have been set at such a high rate as practically to nullify the value of the credits. Thus, the person or firm with whom the transaction was made might charge \$50 (\$25 cash, \$25 credits) for work that could have been obtained elsewhere for \$25 had the client "shopped around." In such a case it is evident that no value whatever would be obtained for the \$25 in credits.

Commodities.—A member bringing in, say, a chair, receives, according to the printed statement of the Exchange, "a fair valuation" in credits on the books of the association. It seems to be the actual practice, however, that the member receives what he asks for the commodity. On all articles thus brought in there is an average write-up in price of 25 per cent, to cover the cost of invoicing, handling, and transfer. In order to obviate these charges the association encourages direct trading of articles between the members wherever possible, as in that way the Exchange never actually handles the article; its only evidence of the barter is the credit transfer on which the 10 per cent commission is collected.

In the case of commodities brought in to the association there is often no immediate turnover or exchange. It may be some time before there is a call for the article brought in, and therein may lie a possible danger to the success of the Exchange. Many of the articles now in stock in the stores are those which would be called for only occasionally, if at all; some are of types whose popularity is long since past. When the Exchange receives them, however, it obligates itself for a definite amount payable immediately in any services or goods available; the commodity which it has accepted may be salable only after considerable delay or not at all. Exchange officials, however, discount the idea of any danger in this respect, saying that it has been the experience in all Exchange projects that anything can be disposed of eventually, provided it is sold for credits or scrip; that the only factor that must be taken into consideration is the lag between the receipt of the article and its disposal.

Services Available Through Exchange

As already stated, the majority of the members are of the professional class, though there are also a certain number of the wage-earning classes, skilled and unskilled. The occupations listed by the Exchange as available are as follows:

Attorney.	Osteopath.	Teacher, vocal:
Architect.	Optometrist.	Singing.
Bookkeeper.	Photographer.	Coaching.
Clerical worker.	Painter.	Sight singing.
Chauffeur.	Paper hanger.	Teacher, language:
Carpenter.	Physician.	French.
Cabinetmaker.	Printer.	German.
Cement contractor.	Plasterer.	Italian.
Chiropractor.	Plumber.	Spanish.
Cook.	Sheet-metal worker.	Teacher, other:
Dentist.	Solicitor.	Accountancy.
Dietician.	Stenographer.	China painting.
Dressmaker.	Typist.	Dramatics.
Electrical worker.	Watchmaker.	Public speaking.
Gardener.	Teacher, instrumental	Speech correction.
Houseworker, general.	music:	Stenography.
Janitor.	Piano.	Water colors.
Mechanic.	Pipe organ.	Dancing, ballroom.
Milliner.	Violin.	
Nurse (trained and practical).	Flute.	
Oculist.	Cello.	
	Fretted instruments.	

Other services available include hemstitching, mimeographing, multi-graphing, and laundry work.

The Exchange does not guarantee to provide any particular service. If the service desired is not immediately available, a note is made of it and the inquirer is notified as soon as it can be obtained. For this purpose the association runs an advertisement in one of the local newspapers daily, stating the services desired which the Exchange can not supply.

Thus one member put in a request for a stamp collection. This could not be supplied immediately, but the advertisement produced the desired collection which the member bought, paying for it in credits. He then took the collection to his landlord (a stamp collector), who gave him in return credit on his rent. In this way, without a cent of money changing hands, the seller disposed of his collection, the stamp collector received what he wanted, and the member's rent was paid.

Notwithstanding the fact that the member specifically agrees to accept remuneration in whatever services or goods may be available, there has been some dissatisfaction on the part of a few who have charged that they were misled or misunderstood just what they could secure in return for their credits. Perhaps the greatest source of dissatisfaction has been that the Exchange has been able to supply comparatively little of that which everyone needs and must have—foodstuffs. In order to encourage the bringing in of foodstuffs the association waives its commission on such articles. It has not, however, been particularly successful in this line as yet. There are plenty of vegetables and fruits available in the surrounding territory, but the Exchange has not as yet been able to solve the problem of transportation of these articles to the city. There have been numerous instances in which the Exchange could have been the recipient of outright gifts of foods; official regulations, however, prevent the association from

accepting gifts, as it is not a charitable institution and as it would receive them only to dispose of them again.

From 175 to 200 persons are being housed through the efforts of agents of the Exchange who have made arrangements with the landlords or owners to accept the Exchange credits in payment of the rent.

The Exchange operates an art-goods department handling mainly articles made by the members, a general merchandise store (at which furniture is also handled), and a restaurant which feeds about 300 persons a day. The first two operate on a credit basis.

The restaurant has until recently been selling dinner cards for \$5—\$1.50 cash and \$3.50 in credits. It was found, however, that the cash requirement was too high for the patrons to meet, and a new arrangement has been adopted, tentatively, by which one dollar's worth is punched out and the card is sold for \$4 (\$1 in cash and \$3 in credits). This presents a very nice problem for the restaurant, in that cash must be paid for many of the things it needs and the \$1 cash provides a very small margin with which to buy. The restaurant recently effected an arrangement with a Chinese dealer by which the latter exchanged \$100 worth of meat for \$100 worth of printing furnished through the Exchange. It is now negotiating with a wholesaler for the exchange of \$300 worth of groceries for the same value in labor (papering and painting the wholesaler's business premises).

There is also a sewing room operated by the association where members have dressmaking and millinery work done. The pieces remaining from these operations are utilized by being braided into rugs which are sold in the Exchange stores. The women here work for credits of 50 cents an hour. This department labors under the same difficulty as all the others, that employment here, being for credits only and not for cash, is secondary only, the members taking outside paid employment whenever available. The forewoman, therefore, can never be sure of having any certain number of workers at any time.

Another service rendered by the Exchange is free life-insurance protection for six months. It has an agreement with a life-insurance company by which, upon the Exchange waiving its fee for securing the business, each member receives a \$2,000 policy on which no premium is required for the first six months' protection. At the end of that time the policy can be continued upon the member's beginning to pay the premiums required. Should the member die during the first six months his family receives \$1,000.

The association has before it the problem of meeting the regular operating expenses, including the cost of certain necessary work which produces no goods nor exchangeable services. It is generally recognized that the issuance of credits to cover such expenses is unsound and amounts to a depreciation of the scrip outstanding. In order to meet this situation the Exchange plans the establishment of a guaranty fund from which such expenses could be met. It is hoped to obtain such funds by gifts from persons interested in the work of the Exchange and able to contribute.

Bellamy Cooperative Exchange

THIS exchange, located in one of the poorer sections of the city, is the smallest of the exchange organizations studied, having only about 150 members.

Each member is required to pay a registration fee of \$1, and 20 cents in dues each month.

The plan of operation of this exchange differs from that of the others in that definite provision is made for redemption of the "vouchers" in cash after 24 transactions.

As each transaction between members is completed a stamp to the amount of 5 per cent of the value involved must be affixed on the back of the voucher in the space provided for it and must be canceled by the member's signature and membership number. These stamps are purchased with cash at the office of the Exchange. After 24 such transactions the voucher is returned to the Exchange for redemption. Thus on a voucher with a face value of \$1 there would, at the end of 24 exchanges, have been paid \$1.20 in cash. Of this the Exchange retains 20 cents (representing 1 per cent) for its services, and the dollar is used for redemption purposes.

The employees of the association are paid entirely in credits. Although members are encouraged to bring in for exchange any usable articles, very little stock was on hand at the time of the agent's visit. The association has been able to obtain food only to a limited extent. The services it lists as available to members are the following:

Professional: Architects, chiropractors, dentists, doctors, lawyers, and real estate men.

Arts: Teachers of art, dancing, drama, languages, music, piano, and singing.

Artisans: Auto mechanics, carpenters, decorators, gardeners, laborers, painters, and plumbers.

Sports: Fencing, golf, mountain climbing, riding, and tennis.

General: Apartments, automobile parts, automobile tires, barbers, beauty treatment, building contractors, copyists, dressmaking, dry cleaning, florists, hospitals, hotels, laundry, photography, printing, radios, residences, restaurants, stenography, tailoring, and watch repairing.

New Era Cooperative Exchange

BOTH the main office and the branch office of the New Era Cooperative Exchange are in Hollywood.

The association charges a membership fee of \$2.50. As in the other associations, exchanges of goods or services are permitted only between members, the amount of the transaction being evidenced by an "exchange check." When this check is turned in to be entered on the books of the association, the amount of the check plus 5 per cent is deducted from the credits of the member who issued the check, while the member who receives it must pay to the association 5 per cent in cash. Thus the association receives 10 per cent on each transaction, of which half is in cash and half in credits.

The branch office of the association receives the commodities brought in for exchange, but at the time of the agent's visit there was very little stock on hand. The Bellamy Exchange, already described, was formerly also a branch of this organization.

The association has between 1,100 and 1,200 members, whom the manager describes as being mainly of the professional and high-grade technician classes. The services available, therefore, are chiefly of the luxury type, comparatively few of the articles of prime necessity being available through the Exchange.

The services listed as available include all those listed under the Bellamy Exchange, plus the following:

Professional: Astrologers, chiropodists, dieticians, landscape gardeners, metaphysicians, optometrists, and osteopaths.

Arts: Teachers of sand crafts, and sculpture.

Artisans: Decorators, draftsmen, engineers, roofers, surveyors.

Sports: Bridge, and chess.

General: Awnings, cremation, engraving, instruction in speed writing, insurance, massage, minneographing, "problems sympathetically solved," rejuvenation, shoe repairing, typewriters, undertakers, and vocational advice.

The manager states that a business of about \$1,200 a week is being done through the Exchange.

Employees are paid entirely in credits.

The American Unit

THE American Unit was formed about September, 1932. It differs from the other exchanges in two respects: (1) It receives no commodities for exchange and therefore operates no warehouse nor store, functioning merely as a recording agency and agency for the expansion of the services offered; (2) it handles no cash at all, requiring neither a membership fee nor payment of a cash commission on transactions. It exacts 2½ per cent on the face value of every transaction, as evidenced by the "credit slip," but this is charged merely against the account of the member involved.

The necessary cash expenses of the association are met from a small trust fund.

According to the American Unit Guide, for February 1, 1933, all that is required to become a member is "to accept a T. A. U. credit slip and deposit same to your account or to agree in writing that you will accept T. A. U. credit slips for your merchandise, up to the limit of your ability."

On February 1, 1933, there were listed 774 members, classified into 187 groups. These groups included the following:

Accountants.	Dental laboratories.	Nurses.
Advertising.	Dentists.	Office supplies.
Architects.	Dressmaking.	Optometrists.
Artists.	Druggists (prescriptions).	Orthopedists.
Attorneys.	Electroplating.	Osteopaths.
Automobile service (batteries, bodies and fenders, brakes, storage, painting, repair, tire repair, tops, trailers, wheel alignment, wrecking).	Electrical equipment.	Orchestras.
Barber supplies.	Etching, commercial.	Painting.
Barber shops.	Engineering.	Paper hanging.
Bicycle repair.	Electrolysis.	Photographs.
Beauty service.	Electrotherapy.	Physicians and surgeons.
Blacksmithing.	Engineers, consulting.	Piano tuning.
Books.	Fire extinguishers.	Plumbing.
Bookbinding.	Floor finishers.	Printing.
Burglar alarms.	Florists.	Radio service.
Business counsel.	Flowers, artificial.	Real estate.
Cabinet work.	Foot correction.	Repairs, miscellaneous.
Carpet cleaning.	Funeral directors.	Roofing.
Carpenters.	Furniture.	Schools.
Contractors.	Glass blowing.	Sheet-metal work.
Cards.	Golf, miniature.	Shoe repair.
Chiropodists.	Hairdresser.	Shoe shining.
Chiropactors.	Hospitals.	Stenographers.
Cleaning and dyeing.	Interior decorators.	Surveyors.
Cleaning solvents.	Insurance.	Tailors.
Commercial artists.	Jewelry manufacture and repair.	Tax consultants.
Cosmetic manufacturers.	Jewelry, costume.	Theaters.
Dance halls.	Landscape gardening.	Tile setters.
Detectives.	Laundry, hand.	Tool and die makers.
Dental supplies.	Locksmiths.	Transfer and express.
	Machine shops.	Trucking.
	Massage.	Turkish baths.
	Multigraphing.	Typewriter service.
	Needlework, fancy.	Watch and clock repair.
	Notary public.	Window washing.

In some instances the persons or firms listed accept credits only for labor; any materials or parts furnished must be paid for in cash.

Like all the other exchanges, the American Unit pays its 115 employees entirely in credits. In order to comply with the law against payment of wages in scrip, the association requires each employee to sign the following agreement:

CONTRACT OF EMPLOYMENT

(For the American Unit employee)

I, the person whose name is signed on the reverse side hereof, have solicited employment of, and agree to work for, the American Unit, a California corporation, in any capacity assigned to me, on the terms, for the compensation and with the distinct understanding as follows:

1. That the American Unit is a nonprofit, charitable institution which pays no wages.

2. That all work done or services rendered by me to the American Unit at any time, is and shall be, without compensation, salary, wages, or other remuneration; that I am donating and will continue to donate such work, services and labor to the American Unit free of charge.

3. That this employment may be terminated at any time by either the American Unit or me.

4. That as a mere gratuity to me and not as wages or salary, the American Unit may extend to me credit on its books which I shall be privileged to utilize to the extent of the facilities provided from time to time by the American Unit.

5. I know that the American Unit maintains nothing other than a list of members who, from time to time, will exchange property, labor, and services for credit slips, and that I must share with other members the opportunity to utilize any credit that I may have.

6. I have been distinctly told by officers of the American Unit that neither money, clothing, food, shelter, nor other necessities of life can be obtained in exchange for such extensions of credit as may be gratuitously donated to me by the American Unit, but that such things other than money may possibly, from time to time, be available in limited quantities from other members in exchange for such extensions of credit; that if and when available, I may, at that time, utilize any credit I may have to the extent acceptable by such other members.

7. That my sole object of becoming identified with the American Unit is to provide me an opportunity, if I elect to avail myself thereof, of my share or proportion of whatever may become available from time to time through the facilities provided by the American Unit.

8. That no representations have been made that are not set forth herein and that I have been distinctly told that no officer, agent, or employee of the American Unit has any authority to make any representations, statements, or promises to me appertaining to the subject matter hereof except such as are set forth herein.

9. I agree to abide by the rules, regulations, by-laws, and plan of business of the American Unit as the same may exist from time to time.

One of the officials states that during the period since the association was formed some \$69,000 worth of business has been done through the association.

MARCH 8, 1933.

Organized Unemployed (Inc.), Minneapolis

THE Organized Unemployed (Inc.), of Minneapolis, Minn., was established through the efforts of the Rev. George Mecklenburg, of that city, who hoped to organize a system of effective self-help for the unemployed of the city who were not recipients of charitable relief. These unemployed, who he believed would in many cases go to any length to avoid public relief, were to be helped to help themselves through a system of barter and exchange and the use of scrip.

Papers of incorporation were filed by the Organized Unemployed (Inc.) under the laws of the State of Minnesota on August 26, 1932. The articles of incorporation make no reference to the immediate purposes of the organization or to the means and methods by which these and its general aims are to be attained.

Article 2 of the incorporation papers describes the general nature of the business of this corporation. It reads as follows:

The general nature of the business of this corporation shall be:

To promote the general welfare and education of all the citizens of the United States.

To accept and receive donations and gifts of money, goods, wares, and merchandise.

To own, buy, and sell real and personal property of all kinds and character, including leases or such other interests in real property as may be necessary or legal in the transaction of its business.

To act as agent or broker for others.

To do such other kinds or classes of business as are not inconsistent with the purposes herein enumerated.

Article 6 provides that—

The government of this corporation and the management of its affairs shall be vested in an executive committee of not less than 3 nor more than 50 members, the number to be fixed by the by-laws. Each shall be a member of this corporation and elected to membership in the board by the members at their annual meeting each year and shall hold office for the term of one year or until his successor is elected and qualified.

Up to the present time no constitution nor by-laws have been drawn up by the corporation. A central committee, consisting of the general chairman, secretary-treasurer, and business manager of the organization, the chairmen of the 13 city wards, and the managers of the various departments and committees, has been loosely organized, but no definite powers have been delegated to this body. The following is a list of the present membership of the central committee: General chairman, secretary, business manager, contact and solicitation department manager, radio publicity chairman, news publicity manager, printing and supplies manager, social service and relief manager, home owners and personal problems department manager, auditing and accounting department manager, farm contact and produce supply manager, clerk, labor assigner, warehouse manager, transportation manager, wood-cutting superintendent, warehouse selection chairman, barter and exchange department manager, bread and milk supply chairman, auto repair and machinery department manager, gas and oil committee chairman, clothing manufacturing department manager, central storehouse manager, canning department chairman, meat department manager, cafeteria committee chairman, manager of cafeteria, shoe repairing department manager, central labor exchange and made-work department.

manager, receiving department manager, legal committee chairman, medical committee chairman, dental committee chairman, educational committee chairman, organization and nominations committee chairman, State planning committee chairman, farm project chairman, dormitory and club rooms committee chairman, chairmen of 12 guilds, personnel department manager, and 13 ward managers—a total of 64 members.

This central committee of the organization, consisting of 60-odd members, must not be confused with the "executive committee of not less than 3 nor more than 50," as provided in article 6 quoted above. Very few, if any, members of the central committee, with the exception of Doctor Mecklenburg, Earl Lenth, and Max L. Keith (the former temporary chairman of the organization but who is no longer actively associated with it) are actual members of the corporation. The meetings of the central committee of the Organized Unemployed (Inc.), which take place regularly every Saturday afternoon, are open to the general public. A careful examination of all the minutes of this committee discloses no effective participation of the central committee in the actual management of the affairs of the organization.

Doctor Mecklenburg states that no by-laws of the corporation were drawn up for fear the unreliable element among the unemployed would obtain control of the organization. Almost from the beginning he received moral and financial support from a group of business people who agreed to supply him with a considerable amount of money (over \$5,000) to help run the organization. The records of the auditing department of the organization disclose the fact that no cash donations or cash transactions are entered in the official books of the organization. These have been handled exclusively by Doctor Mecklenburg.

Membership

ARTICLE 7 of the incorporation papers provides that the regular membership "shall be confined to persons elected to membership by the executive committee, each of whom may become a regular member of this corporation upon the payment of dues in the sum of \$1." The records of the organization do not disclose how many members there are in the corporation proper. Any unemployed person, man or woman, who registers with the organization and who expresses a desire to work with it, is automatically considered a member of the organization. No fees are required for membership. The total registered membership of the organization is given in the statistical data of this report. (See p. 753.)

Launching the Movement

SOME two months prior to incorporation, Doctor Mecklenburg entered upon an active campaign to organize the unemployed, in order (quoting a statement by Mr. Lenth) "to aid the unemployed and needy by stimulating and directing the spirit of self-help in offering work opportunity to as many individuals as possible in order that they may maintain their independence of public and private charity." Assisted by his friends, by the Wesley Methodist Episcopal Church, of which Doctor Mecklenburg is the pastor, and by a considerable following, he proceeded, with the help of posters, newspaper pub-

licity, and radio announcements through his own radio station, to gather around him a large number of unemployed workers enthused by the idea of establishing an organization which might help them secure work. Once launched, the movement grew rapidly. After two or three general meetings of the unemployed, arranged and addressed by Doctor Mecklenburg and some of his associates, it reached proportions where it became necessary to branch out into the separate city wards as a more effective means of reaching the unemployed and spreading the movement. Further mass meetings were held, and the enthusiasm continued to increase. A loose organization was established by coordinating the ward activities with the central headquarters temporarily located in Wesley Church. The new organization at once proceeded to act. First, some 3,000 unemployed (men and women) were sent out through the city in a house-to-house canvass to determine the precise number of unemployed in the city of Minneapolis. All who registered were considered members of the organization. It was then decided to send teams of workers out to the neighboring farms to establish contacts with the farmers, so that a system of barter could be arranged whereby the farmers would be supplied with labor or commodities they might need in exchange for farm produce. The high pressure under which this work was accomplished is well described by E. W. Thompson, manager of the farm and wood department of the organization, who at that time was in charge of these activities:

We arranged, at first, to send out 20 men to do the contacting work. We planned to pay them \$2 a day per person. Doctor Mecklenburg offered to pay it personally. He also agreed to buy the gasoline and oil for these men to be used in the contact work. These men went out in teams of two or three, leaving early in the morning and returning late in the evening. Some reported good progress; others were rather discouraged. Nevertheless, the first real day's work, on August 16, resulted in orders for 48 man-days' work. This was primarily general farm work such as milking, silo filling, repairing of farm buildings, picking tomatoes, potatoes, topping onions, picking carrots, etc.

Each contact man was issued an identification card establishing his connection with the Organized Unemployed (Inc.), and later also a special "scrip credit" which specifically stated the amount he earned and entitled him to receive same in produce from the warehouse.

Late in August, the pastor of the church in Brooklyn Center requested the Organized Unemployed (Inc.) to send out a group of workers to repair the roof of the church, finish the gymnasium, plaster and stucco the parsonage, and repair some of the farmers' homes. It amounted to about \$650, involving the work of plasterers, painters, carpenters, and common laborers, who were paid at the rate of from \$1 to \$3.75 per day. This entire job was paid by farm products donated by the farmers to the church. Other church work followed. In addition, two large truck farmers hired about 400 men for picking potatoes, tomatoes, carrots, and topping onions. The work was done on a share basis, and a large quantity of vegetables, particularly potatoes and carrots, was stored in the warehouse, the use of which was donated by the school board of the city of Minneapolis.

While this contact and farm work was carried on, the separate wards organized 17 canning units, chiefly in church kitchens, where the women of the wards volunteered their services, later being paid in scrip for the work done.

Though no official drive for funds was launched either by Doctor Mecklenburg or by the Organized Unemployed, appeals for help were broadcast daily from the Wesley Church radio station and there was a steady flow of donated produce, clothing, shoes, and other items coming into the newly established headquarters of the organization in the old Girls' Vocational High School, the use of which was permitted, rent free, by the school board of the city of Minneapolis.

The exhibitors of the State and county fair donated the entire produce of the exhibits. Army trucks were used in hauling this produce to the city. Some 20,000 sacks were donated by several flour and other companies to hold the pro-

duce. Large quantities of jars were given by the several department stores, and a number of individuals made personal money contributions for the purpose of supplying the organization with trucks, gasoline, oil, and other items which could not be easily secured otherwise.

Immediately after Labor Day the wood department, also managed by Mr. Thompson, started its operations. The first camp was established on the Wickstrom farm some 35 miles away from Minneapolis. The Organized Unemployed members were offered an opportunity of clearing the land on the farm in return for the wood they might get in the process of clearing the land. The men were paid by the organization, at first \$6 and then \$5 for each cord of wood cut and piled on the farm. This camp was established with the help of the State government, which supplied the tents and all the necessary camp equipment, including a rolling kitchen.

The first camp was followed by a series of other wood camps, with the result that in the height of the wood-cutting activity in December, 1931, a maximum of 483 men were engaged simultaneously in cutting wood in 30 different sections around the city of Minneapolis. The pay roll of the wood battalion contained a list of over 700 names, of whom a small number (approximately 95) remained permanently in the camps. The other workers had to be transported daily to and from the camps, involving a considerable expenditure in gas and oil used up by the transportation. By March 1, 1933, a total of \$25,814.02 had been paid out in scrip as wages to the workers directly engaged in the process of cutting wood in the camps. A large amount of wood is still piled in the various camps, and its delivery to the city has been considerably impeded by the lack of cash necessary for the delivery. This in spite of the fact that a minimum of at least four orders per day had to be canceled by the organization because of the shortage of wood at the warehouse.

Present Functional Structure of the Organization

THE organization's pay roll for the week ending February 22, 1933, contains the names of the following departments, which are, with the exception of the warehouse and the wood-cutting battalion, all located in the general headquarters of the organization in the old Girls' Vocational High School Building. These departments are: Accounting, cafeteria, city labor, clothing manufacturing, contact and sales, dormitory, farm contact, farm labor office, general office, barter and exchange, publicity, receiving department, retail (grocery and clothing), sauerkraut, shoe repairing, trucking and transportation, warehouse, wood battalion, building maintenance, and miscellaneous. The manager of each department is appointed either by Doctor Mecklenburg or by Mr. Blamey, the general manager of the organization, who was himself appointed by Doctor Mecklenburg. The head of each department has the right to hire and discharge the employees of his department, though now subject to approval by the executive officers of the organization.

Departmental Functions

It is impracticable to describe in any great detail the operations of each department, these being at times rather intricate because of the triple system of exchange used by the organization—scrip, barter,

and cash. Several deals have been consummated by the organization which, in addition to scrip and cash, involved a roundabout process of barter with several dealers. To trace the effect of such a deal on the various departments of the organization would have entailed a greater expenditure of time than was available in the present survey. However, the following brief description of the work of the major departments will indicate the general character of their activities.

Accounting Department

The accounting department was organized early in September to take charge of all the records of the organization, including the issue of scrip money. During the week of February 22, 1933, this department consisted of 1 manager (on the executive pay roll); 1 accountant, 1 timekeeper, and 1 cashier, each receiving \$12 per week; 1 bookkeeper, at \$9 per week; 1 cost accountant (for the clothing department), at \$10 per week; 3 assistant cashiers, at \$6 each per week; and 2 part-time assistant cashiers, at \$3 each a week. It is the duty of this department to prepare the regular monthly financial statements of the organization, covering all its scrip and barter transactions. The cash affairs of the organization are handled by Doctor Mecklenburg himself. The accounting department also keeps records of all the weekly pay rolls, with the exception of the so-called executive pay roll, for which no records are kept by the organization.

The first issue of scrip took place on September 13, 1932, to the amount of \$3,000. Scrip is issued of the following denominations: 5 cents, 10 cents, 50 cents, \$1, \$5, and \$10. It is copyrighted and protected by the seal of the Organized Unemployed (Inc.), and by the signature of Earl Lenth, secretary-treasurer of the organization, who now signs all the scrip. The first issue was signed by Doctor Mecklenburg and later some scrip was signed by Elizabeth Fish, principal of the Girls' Vocational High School.

Cafeteria

The cafeteria was organized about August 15, 1932, and was started on a very small scale, supplying on the average about 30 to 40 meals a day. Through the generosity of a local cafeteria chain organization, which loaned to the Organized Unemployed a complete kitchen outfit, together with all the equipment (valued at about \$6,800) required for the running of a cafeteria, the activities of this department have been greatly increased. The same cafeteria company also supplied the chef for the cafeteria, who is now paid partly in cash by his own employer and partly in scrip by the Organized Unemployed. In addition large quantities of surplus food from the chain restaurants are delivered daily and used in the cafeteria. Because of this expansion the cafeteria was enabled to serve on the average 1,400 meals a day and is now open for service all day from 6 a. m. until 7 p. m. The regular charge for a meal is 10 cents in scrip, although there are extra charges for soup and other items which are not a part of the regular meal. About 40 people are employed regularly in the cafeteria department at a wage in scrip ranging from \$1 to \$2 per day. During the week of February 22, the cafeteria department had 38 full-time employees, 8 part-time workers, and a total pay roll of \$335.25.

City Labor Department

This department was organized December 7, 1932, and consists of a manager, an assistant to handle all the male applicants for jobs within the city limits, and a woman assistant to handle the female registrants. The entire list of unemployed has been segregated by occupations, with separate guilds organized for the individual major trades or occupations. It is claimed by the department that up to February 25, 1933, 1,350 men were placed on jobs, permanent and otherwise, with total earnings of combined cash and scrip to the amount of \$12,825. In the women's division 250 placements were made, with total earnings of \$570. No charges are made to the workers for these employment services. The city labor department has no set standard of wages. All the cash jobs are turned over by the manager either to an individual worker or to the guild, and it is left entirely to the discretion of the man on the job to make the terms of agreement for the work to be done. In the case of barter deals of services for commodities, the organization makes the agreement and pays the workers in scrip.

The operations of the painters and paper-hanging guild have been described by the chairman of the guild as follows:

There are about 1,100 unemployed listed as painters and paper hangers on the register, many of whom are not at all familiar with the nature of the work involved. The guild consists of about 125 men, of whom about 40 are really active. These are skilled artisans, and the work is as a rule divided among these men only. All earnings, whether in cash or in scrip, go to the individual workers. On the whole, however, there was very little work done by the guild during the winter.

The several other guilds, of which the carpenters and plumbers are the most active, are operating on a basis similar to that described above.

Clothing Department

Clothing operations started with remodeling and reconditioning the large supply of clothing gathered by the organization through solicitation. The department began with 2 foot-power machines and 8 or 9 workers. Later additional power sewing machines, as well as an electric cutting machine, were purchased for scrip. A pressing machine was borrowed, and the organization embarked upon the manufacture of mackinaws for men, women, and children. A small amount of flannel shirting and other goods was purchased for cash, and the department started manufacturing ladies' dresses, men's and women's flannel garments, and men's and boys' shirts. During the week of February 22, 1933, the personnel of this department consisted of 1 manager, 2 cutters, 16 power-machine operators, 5 tailors, and 10 other workers. With the exception of the manager and the two cutters, who are getting \$15 a week, all employees of the department are paid 20 cents an hour for 44 to 46 hours of work per week. The total pay roll for the week referred to was \$227.40.

The clothing department is now undergoing a process of enlargement. Agreements have been made with several outside concerns whereby cloth is to be supplied to the clothing department in exchange for the manufactured goods, which are to be returned to the outside concern and sold on the open market. A local manufacturer has transferred his 70 sewing and other types of machines to the headquarters of the Organized Unemployed. He agreed to supply the organization with the raw materials and the necessary accessories for

the operation in exchange for the manufactured product with which to supply his former customers. This manufacturer is to get preference on his work. The only labor stipulation is that the average daily wage for the workers on these jobs must not fall below \$1.50 in scrip.

Farm Contact and Farm Labor Offices

The nature of the work performed by the farm contact and farm labor departments is described elsewhere in this report. At present the farm contact activities are comparatively slack and the departments are devoting most of their time to the wood-camp operations. During the week ending February 22, 1933, the wood battalion consisted of 141 men, who drew a total wage of \$782.05.

Barter and Exchange

The barter and exchange department was set up to provide an outlet for the furniture or other things and goods the unemployed might want or be compelled to sell or to exchange for things needed. Very little of direct barter is taking place in this department. The manager operates on the principle of first purchasing the things brought for exchange on a scrip basis and then, if desired, offering to sell the things wanted separately, also, of course, for scrip. The activities of this department are not very extensive but it has proved to be very profitable.

Publicity Department

The function of this department is to prepare and deliver to the local press statements concerning the activities of the entire organization. The organization subscribes to a clipping agency, and the newspaper reports are clipped and pasted on the sheets of a large album, together with a collection of photographs depicting the various departmental activities of the organization. This department solicits visitors both through the press and radio talks, and Doctor Mecklenburg himself uses the various channels of publicity at his disposal—the radio station of the Wesley Church, the pulpit, and numerous talks before social and club gatherings. As a result of this extensive publicity work, the organization has recently been literally swamped with requests for information and with local and out-of-town visitors.

To satisfy the numerous requests for information, and at the same time to utilize the favorable publicity for the benefit of the organization, there was prepared for distribution folders containing standardized sets of articles and other materials pertaining to the process of promoting and organizing self-help activities for the unemployed. These folders are offered for sale through the mail and to visitors at the rate of \$1 each. Some 200 were sold during the month of February.

Retail Store (Groceries, Meats, Clothing, Shoes, Dresses, etc.)

The retail store was started on September 5, 1932. At that time large quantities of farm produce were rapidly coming in to the warehouse, and the store had large supplies of vegetables. However, at no time during its operation could the store actually supply all the necessary articles required even for the lowest standard of living. No flour is available except what is donated by the Red Cross. Meat can now be had on the average once or twice a week, in very insufficient

quantities. No sugar has been available since Christmas. At present (March) the supply of farm produce is very low and is not of a very good grade. Potatoes, onions, rutabagas, sauerkraut, and preserved goods are about the only articles available in sufficient quantities and in comparatively good condition. It is stated by the manager of the store that the average Saturday business turnover amounts to between \$500 and \$700. The prices of a few articles are either lower than or equal to outside prices, but for most items the prices are somewhat higher than outside.

The personnel of the retail store consists of 1 manager, 5 grocery clerks, 1 stock man, 3 helpers, 1 janitor, 2 bread-department clerks, 5 clothing clerks, 2 meat-department clerks, and 2 cashiers. The manager receives \$18 and the other employees from \$6 to \$12 a week.

Relations with Other Organizations

SO FAR as it can be ascertained the Organized Unemployed (Inc.) did not invite cooperation from the local relief authorities, employment agencies, or such other organizations as the Minnesota Federation of Churches, community fund, family welfare, or the labor unions. It is not reciprocating with the city relief agencies in their system of confidential clearings in order to avoid duplications of persons receiving aid from several agencies. However, since the Organized Unemployed (Inc.) has been getting a part of the flour donated by the Red Cross, it has been required to clear through the confidential exchange all of its members who become recipients of either the flour or the bread baked therefrom. The Central Labor Union of the city of Minneapolis, representing all of organized labor in the city affiliated with the American Federation of Labor, is in decided opposition to the activities of the Organized Unemployed. When asked for an official statement stating the reasons for this opposition, the executive committee drew up a resolution which was later approved by the entire body of the Central Labor Union. The contents of this resolution are as follows:

Complaints made to the Central Labor Union by several affiliated unions that the Reverend Mecklenburg unemployed relief plan was lowering their scales of wages and consequently their living standards have caused this central body to investigate these grievances.

Investigations made show these complaints are well founded. In fact, the Mecklenburg Organized Unemployed relief plan has no fixed scale of pay and no uniform conditions under which workers are employed.

It is found that the Mecklenburg unemployed relief plan is breaking down wage scales and conditions and lowering living standards to a point where honest toil brings only the reward of the barest existence or even less.

Aggravating this situation is the fact that the scrip issued by the Mecklenburg Organized Unemployed relief plan has in instances been sold at a large discount, evidence disclosing that it has been offered for sale for as little as one-third of its face value.

This offers an opportunity to unscrupulous employers who otherwise would pay wages in cash to buy up the scrip at a heavy discount and use it to pay wages instead of using cash. This tends to further drive down wages and impair working conditions.

It is the function of the trade-union movement not only to maintain wage scales, working conditions, and living standards of the workers, but to seek at every opportunity to raise and improve them.

We find our organizations in their attempt to function toward the goal of these trade-union purposes and ideals hindered and opposed by the policies of the Mecklenburg Organized Unemployed relief plan.

Therefore the Central Labor Union of Minneapolis declares itself opposed to the policies being carried out by the Mecklenburg Organized Unemployed relief plan that are lowering wage scales, making working conditions more arduous, and lowering the standards of living of those who toil.

Assets and Liabilities

STATEMENTS of the resources and liabilities of the Organized Unemployed (Inc.) were prepared by the auditing department of the organization as of the following dates: November 30 and December 31, 1932, and February 22, 1933.

The figures presented in the table below were taken from these reports. The figures are subject to the following explanations:

1. The financial statements were prepared by the auditor of the organization and were not checked or approved by any outside agency.

2. The financial statements do not show the amounts of cash or other donations used by the organization, although the inventory contains all the assets acquired by the Organized Unemployed (Inc.), whether through its own activities or through donations of cash or things.

3. No account of the actual physical assets of the organization could be secured, and the financial reports do not state specifically what methods were used to convert the numerous items to a monetary basis.

However, in the case of wood, which is by far the most important asset of the organization, it was possible to establish a direct connection between the actual amount of wood owned by the organization and the value it placed on it in the financial statement of February 22, 1933. On that day the organization had 2,231 cords on the several camps operated and 314 cords in the warehouse. The maximum price of the highest quality of wood sold by the organization is \$12.75 per cord in scrip. It costs the company a minimum of \$1.25 to deliver a cord of wood from the warehouse to a customer. The maximum value of a cord of wood at the warehouse is therefore \$11.50, and the total maximum value of the wood in the warehouse on February 22, 1933, was \$3,611. It costs the organization a minimum of \$2.25 per cord to deliver the wood from the camps to the warehouse and an additional \$1.25 per cord to saw and handle the wood at the warehouse; these are for direct labor only. The maximum price of the wood at the camps could not, therefore, exceed \$8 per cord retail. Assuming that all the wood in the camps is absolutely first class, the total value of the entire supply on February 22, 1933, could not very well have exceeded \$17,848, and the entire value of the wood in the camps and in the warehouse would thus amount to a maximum of \$21,459. In the financial report of February 22 the value of the wood in the warehouse and in the camps is given as \$24,161.97, or \$2,702.97 higher than the maximum as above compiled.

Pay Rolls

THE pay-roll records given below do not include the so-called executive pay roll, for which no records are kept in the auditing books of the organization. It could not be ascertained whether the persons on the executive pay roll are paid in scrip or in cash, but one of the men stated that he had been promised cash payment but had not been receiving any.

¹ Not available.

² Some employees on a part-time basis.

Value of Scrip

THE organization has never been in position to supply all the essential needs of the unemployed. Such items as sugar, coffee, milk, and butter, about 50 per cent of the meat, carfare, gas, and electricity, have to be paid for in cash. This means that the recipients of scrip money are compelled either to enter upon various barter plans of their own, which would in the final stage bring them the necessary cash, or sell the scrip for whatever it will bring on the market. There is no definitely established quotation for the value of scrip, although it is no secret that any reasonable amount of it can be bought at the rate of

¹ Pay rolls do not include the so-called executive pay rolls, nor the amounts, if any, paid in cash.

50 cents on the dollar, and even less. So long as the scrip remains within the confines of the organization, it has no effect either on the rate of wages or on the prices of commodities. But a considerable number of outside dealers and professional groups have been accepting scrip in exchange for either commodities or services. Goods produced by labor paid in scrip are being sold by outside concerns for cash. Just now the organization is planning to enlarge the production of such goods produced by labor within the organization and sold by outside concerns for cash. The effects of these operations and of the falling value of the scrip dollar can not now be estimated, but it is conceded that there are dangerous elements in this situation.

Wood Operations

THE following table shows the statistics of wood operations of the organization during the period September 1, 1932, to March 1, 1933:

Number of camps operated.....	31
Total wood cut ² (cords).....	5, 687
Share of Organized Unemployed (cords).....	4, 051
Total wages to wood battalions.....	\$25, 814. 02
Cost of transportation of workers.....	\$1, 728. 84
Total delivered to warehouse (cords).....	1, 816
Total sold (cords).....	1, 471
Balance left in warehouse March 1, 1933 (cords).....	345
Balance left in camps March 1, 1933 (cords).....	2, 235
Balance left in camps, February 22, 1933 (cords).....	2, 231
Balance left in warehouse, February 22, 1933 (cords).....	314

In the following table data are shown for wood operations in the last week and the highest and lowest weeks in the same period:

WOOD OPERATIONS OF THE ORGANIZED UNEMPLOYED (INC.) IN SAMPLE WEEKS OF THE PERIOD SEPTEMBER 1, 1932, TO MARCH 1, 1933.

Item	Week ending Mar. 1, 1933	Highest week Dec. 21, 1932	Lowest week Sept. 24, 1932
Total pay roll.....	\$777. 45	\$2, 531. 14	\$96. 00
Transportation (gas).....	\$55. 12	\$192. 06	\$5. 94
Total share of Organized Unemployed (Inc.) (cords).....	119½	334	12
Wood delivered to warehouse (cords).....	123½	65½	0
Cost of delivery.....	\$285. 45	\$129. 59	0
Sawing and handling at warehouse.....	\$154. 30	\$114. 30	0
Delivered to customers (cords).....	93	64	0
Cost of delivery.....	\$121. 32	\$71. 57	0

The average selling price in scrip was \$12.75 per cord for oak and \$10.75 per cord for mixed wood; \$1 extra for piling in basement. Somewhat lower prices have been quoted for cash payments.

Unemployment Registration

THE total number of persons who had registered with the Organized Unemployed (Inc.), up to February 16, 1933, was 26,815. The distribution of such persons by sex, number of dependents, etc., was as follows:

² Partly on a sharing basis, partly for the work of clearing the land.

NUMBER OF PERSONS REGISTERED WITH ORGANIZED UNEMPLOYED (INC. UP TO FEBRUARY 16, 1933)

Item	Prior to Nov. 16, 1932	Nov. 16, 1932, to Feb. 16, 1933	Total

To work with Organized Unemployed (Inc.).....	17, 150	1, 803	18, 953

Summary and Conclusion

ASIDE from the justness of the criticisms which have been made regarding the management of the enterprise, it is evident that during the first few months of its existence the Organized Unemployed (Inc.) actually accomplished a good deal, particularly in its farm activities and in the wood department. While the figures issued by the organization referring to the number of unemployed men and women who were aided through its activity can not be supported by the statistical records of the organization, a large number of unemployed workers undoubtedly did profit through the operations carried on, even if only to the extent of receiving shelter and enough food so that they were not compelled to apply to the city relief or charity organizations.

It is stated by the executive officers of the Organized Unemployed (Inc.), and it appears to be true, that the larger part of the unemployed who received work aid from their organization came from the "white collar" group who were on the border line and who would rather starve than undergo the humiliation of applying for aid through the regular relief channels. Even at the present time, with the productive activities of the organization at their lowest ebb, its resources in farm produce and in cash nearly exhausted, and with the value of the scrip dollar, as a means of purchasing such necessities as the organization is not in a position to supply, cut in half, there is a nucleus of perhaps a few hundred people, mainly office workers at the general headquarters, who depend on their scrip income of \$6 to \$10 a week as their only means of a livelihood.

At the present time, although the executive officers still maintain an optimistic attitude, the financial affairs of the organization are in a rather precarious condition. Assuming that the methods of evaluation of its assets used by the organization are strictly conservative³ and forgetting for the moment that the statement of its liabilities as carried in the books of the auditing department altogether omit the large amounts of farm produce, commodities, equipment, and cash contributed by farmers, and the assistance by the sponsoring committee of business men and by others, the financial statement as of February 22, 1933, still makes it sufficiently clear that the only liquid assets of any appreciable value possessed by the organization consisted of the 2,235 cords of cut wood scattered in the several camps, some 35 miles away from the city of Minneapolis. The organization itself has not had the cash needed to transport the wood to the ware-

³ See financial statements, p. 750.

house, and is compelled daily to cancel orders for wood because of its inability to make deliveries. It has been suggested by some of the members of the sponsoring committee of business men that this committee may find it necessary to "invest" an additional \$3,000 to enable the Organized Unemployed (Inc.) to bring the wood to the city while the winter lasts and there is still a demand for wood as fuel. The effect of such action by the sponsoring committee, or of the failure on the part of the committee to take any action, on the destinies of the Organized Unemployed (Inc.) must be left to the future to decide.

It is apparent that, whatever fate befalls the Organized Unemployed (Inc.), its success or failure can not be used as a criterion in judging other self-help organizations which have followed less centralized methods of organization and operation. The director of the organization stated that during the first few months of the existence of the Organized Unemployed (Inc.) a single dollar of charity judiciously applied to the productive purpose of bringing together the surplus of goods and the surplus of labor produced as much as \$10 of effective aid for the unemployed, and it was the hope of again accomplishing this purpose which induced his sponsoring committee to come to his aid in October when lack of ready cash and organization difficulties threatened the existence of the organization. It is possible that the committee may come to the rescue again, but it is considered questionable whether this would be worth while in view of the policies followed which concealed from the unemployed men and women, on the ground of the maintenance of their morale, the fact that they were after all the recipients of charity. It seems that a more businesslike system of accounting and less propaganda would, perhaps, have shown smaller immediate results but would have formed a more solid basis for the enterprise.⁴

MARCH 10, 1933.

⁴ This report is based on information and data secured by the representative of the bureau from records of the organization, from conferences with Doctor Mecklenburg, Mr. Earl Lenth, secretary-treasurer, and Mr. W. J. Blamey, general manager of the Organized Unemployed (Inc.), and also with all the managers of the individual departments; an official conference with the sponsoring committee especially called for this purpose; and a conference with the mayor and the representatives of the community fund, family welfare, Federation of Churches, State employment office, and the Central Labor Union. Owing to the manner in which the records are kept, it was found impossible to check the reports, particularly the financial statements, which were submitted by the organization.

The Barter Movement in Cleveland

THE earliest barter unit in Cleveland began operations without any formal organization late in the fall of 1931. This was a private enterprise, for profit, but it was sponsored in a measure by certain local clubs. It employed at one time as many as 200 men, who were paid in barter credits redeemable in goods received by the promoter of the enterprise in return for work done under contract. Much of the work was done on a cash basis. The financial success of the enterprise led to various other barter arrangements on a commercial, profit-making basis. In some cases grave abuses crept into the movement, calling for intervention by public authorities.

Other private barter arrangements that have made some headway have been undertaken by business firms with each other and with their customers. In this way a considerable number of men have been kept at work, the companies exchanging their products and paying their men partly in goods thus interchanged. In some cases customers have been permitted to pay obligations by means of goods, and the goods have been used to pay wages and for other purposes.

A somewhat different private plan for encouraging barter has been the printing of a semimonthly periodical containing lists of goods and services offered and desired. The periodical is issued by a printing company and is financed by ordinary paid advertisements and by a charge of 2 cents per copy. "Swap" ads are inserted without charge. A recent issue contained 100 free ads. About 5,000 copies are printed and distributed by local drug stores and other agencies.

The Service Exchange Bureau

ANOTHER private enterprise, but an undertaking that is on a purely nonprofit-making basis, was begun in June, 1932, mainly at first for the exchanging of services. This came to be known as the Service Exchange Bureau. It is located in the photograph studio of the founder, Mrs. E. Standiford-Mehling. She undertook in a small way to maintain a clearing house of information for her clients, who often needed each others' services, and who found it possible, through the agency of the artist's office, to arrange for exchanging their services on a barter basis.

Each registrant fills out a card. At the top of the card are spaces for the file number to be assigned to the registrant, his occupation or profession, and his telephone number. Then follows the statement, "In accepting this service I agree to pay to the Service Exchange Bureau 5 per cent on each deal consummated without further obligation on either side." Below the name and address are two parallel columns headed "I will give" and "I want in exchange," to be filled out by the registrant. These cards are filed numerically in blocks of 10, and there is an alphabetical finding list for locating the cards in case a registrant forgets his file number.

On the basis of the information contained in the registrants' card file, two working files have been constructed, one an occupational file, the other a merchandise file. In the occupational file about 160 occupations are included, ranging from "accompanist" to "X-ray technician." On one side of the card are listed, by numbers, the registrants of each occupation, and following each number is a statement

of the services or merchandise he will accept. On the other side, in the parallel column, is a list of registrants, by numbers, who want the services afforded by this particular occupation, and the numbers are followed by information as to what each has to offer. Under "Dentistry," for example, 20 dentists have registered, while about 140 registrants have expressed a desire for dental work. The following will serve to illustrate the plan of the occupational file:

DENTISTS

Number	Will give services for—	Number	Dentistry wanted in return for—
293	Auto repairing.	47	Farm produce.
10	Clothing.	511	Auto repairing.

In a similar manner a merchandise file is maintained. There are nearly 100 merchandise groups, ranging alphabetically from "accordion" to "window shades." On one side of a merchandise file card are the persons, by numbers, who have goods of a particular kind to offer, with information as to what they want in return; and on the other side of the card are the persons, by numbers, who want that particular kind of merchandise, with information as to what they have to offer in payment.

The use of numbers has the advantages of the privacy as well as the brevity of a code system. A registrant calling at the office can readily discover what others who may want his goods or services are willing to offer in return.

There is also a contact and information file, relating to the immediate work of bringing the parties to a deal together, and the results, though the maintenance of this file depends largely on the volunteering of information by the persons concerned.

Although the registration card commits the registrant to the payment of a commission, this is not enforced. A large proportion of the registrants are unable to pay a cash commission and the bureau has no arrangements for handling goods, even assuming the possibility of payment of the commission in kind. Most of the transactions involve services rather than goods. In practice, payments to the bureau for services are limited to postage and telephone calls. The clerical work, the contact work, and the general responsibility are burdens assumed by the founder of the bureau.

From small, informal beginnings the work increased till considerably more than 500 persons have registered for the bartering of their services for goods or other services, and a considerable additional number have registered for the bartering of merchandise alone. Illustrations of actual contact work by the bureau are to be found in the fact that it has handled 159 calls for food, 150 calls for clothing, and 112 calls for dental work.

The work has become so extensive and burdensome, and the problem of making it self-supporting is so difficult, that efforts are being made to arrange for transferring it to some social agency equipped for handling it on a still more extensive basis.

The Exchange League of the Alumni Federation

A SOMEWHAT similar plan has been adopted by the Cleveland Alumni Federation, which has established an Exchange League, with emphasis on the bartering of ordinary labor for goods or for profes-

sional services. It is located in the offices of the federation, and is maintained by the officers of the federation without profit, purely as a public service. The files contain the names of several hundred laborers under about 150 classifications, including bricklayers, carpenters, farmers, gardeners, handy men, and so on, through the alphabet to woodcutters. A few professionals are included, as an architect, a civil engineer, and a dentist. It is stated that practically all of the persons listed are willing to do any sort of work in exchange for food, clothing, shoes, dental and medical aid, etc.

The registration sheet calls for the trade or occupation, age, religion, nationality, whether married or single, number of children if any, color, sex, former employer, how long unemployed, services or goods offered, services or goods desired, and supplementary remarks. Efforts are being made to verify the information furnished and to make barter arrangements only with dependable workers and responsible professional people.

This work was not undertaken until late in January, 1933, and the number of arrangements consummated has been small. Efforts are being made to interest farmers in the bartering of produce for labor and professional services through the league.

The South End Mutual Exchange

THIS organization was initiated by the University Neighborhood Centers. Barter methods used in other cities were studied for several weeks. The present governing body consists of representatives of the University Neighborhood Centers, the Associated Charities, the Broadway Y. M. C. A., the Kiwanis Club of Southeast Cleveland, local Catholic parishes, the Ministerial Association, the local Lions Club, and the South End Merchants Association. In addition, the municipal authorities and local groups in other sections of the city are interested in the plan, with the idea of promoting similar organizations in other places, together with a centralized exchange for the entire city.

The plan for the ultimate government of the exchange includes three groups: (1) The sponsoring organizations already mentioned; (2) the workers who have only their labor to offer and who wish to find work through the medium of the exchange; and (3) employers, including business men, professional classes, and farmers, who, in return for labor, will supply the workers with goods and professional services. It is stated that exact plans for the representation of the three groups are to be worked out experimentally.

The work of organization was undertaken mainly by a member of the staff of the University Neighborhood Centers, whose services were loaned to the exchange for the purpose. A building for permanent headquarters has been occupied, and work and equipment necessary for converting it into offices and a store have been arranged for, largely on a barter basis. In addition to the work of the organizer and certain other contributed services, a direct subsidy of \$500 has been secured from the sponsoring organizations. In order to obtain operating revenue, a commission on goods exchanged and work secured is charged, the experimental rate being 10 per cent.

The plan calls for the use of existing facilities for producing goods and services, and it proposes noncompetitive arrangements as far as possible with producers and employers in the vicinity of the exchange

and with farmers near Cleveland. It is recognized, however, that some employers may attempt to use the labor made available by the exchange on a barter basis, not to create additional employment, but to supplant existing employees by means of cheaper labor.

In handling the problem of placing values on the labor and the goods exchanged, the officials of the exchange have announced the following policy: "Because the price of goods has in some instances fallen more rapidly than the wage rate, and in other instances the reverse is true, the exchange will attempt to equalize the price of goods and labor in such a way as to be fair to every one participating."

In order to enlist the cooperation of the two groups for whose assistance the exchange is organized, namely, the unemployed workers who need goods and services and the potential employers who wish to dispose of goods and services, an intensive canvass of the needs and resources of the community has been undertaken. Publicity, through the press, the sponsoring organizations, and other agencies, is used to acquaint the community with the plan. Canvassers are sent out to interview professional men, landlords who may have vacant quarters and may need repair work, business men, and farmers.

Detailed blank forms are circulated and the information received is tabulated for filing in card indexes. On the basis of information secured in this way, an effort is made to check the qualifications and the needs of workers and the reliability of prospective employers who offer goods or services in return for labor. It is stated that if an employer is merely seeking to displace existing labor by more economical labor on a barter basis through the exchange, his participation is not encouraged.

Until the operations of the exchange become more extensive, bookkeeping instead of scrip will suffice. It is stated, however, that when enough goods are in stock to serve as a basis for scrip and to make its use more economical than bookkeeping, it will probably be introduced.

Proposed Extension and Centralization of Exchanges

STEPS have been taken by public authorities to curb the abuses arising from efforts to exploit the movement for private profit. Committees of engineers and of public officials have undertaken an intensive study of the situation not only for the purpose of checking practices that are regarded as undesirable but with the idea of promoting the organization of nonprofit-making exchanges.

The immediate problems consist of leadership and finance. The unemployed themselves have shown little initiative, partly because long-continued unemployment and dependence on direct relief have resulted in a condition of helplessness if not of apathy. Social agencies are burdened with heavy duties of administering direct relief, and the inadequacy of funds for this purpose tends to prevent the diversion of any available money into uses requiring a lapse of time, however brief, for making self-help effective.

There is a widely held belief in various circles that the example of the South End Mutual Exchange, if it proves to be successful in spite of extremely inadequate financial support, will lead to other similar units, bound together by a city-wide exchange system. But among the trade-unionists there is a feeling that the barter movement too easily lends itself to the breaking down of labor organizations and of standards of wages, hours, and craftsmanship. Labor unions prefer

to deal directly with employers, and have not been convinced that the employment of labor through barter exchanges is the best approach to the problem. The trade-unions, however, have concerned themselves mainly with skilled labor, and the present problem of unemployment concerns not only the skilled workers, whose unions are able to mitigate in some degree the effects of unemployment, but the much larger mass of unskilled labor, for the most part unorganized. Nor is the problem confined to these classes, for large numbers of the professional and shopkeeping classes are also in desperate need. It is possible that a basis for common action in dealing with the problem may be worked out in connection with the plan of the South End Mutual Exchange for threefold representation in the government of the exchange—representation including the social agencies, the workers, and the employers.

MARCH 7, 1933.

164994°—33—4

The People's Exchange of Kansas City, Mo.

THE People's Exchange of Kansas City, Mo., organized in October, 1932, mainly by Dr. J. W. Parker, is the only important self-help activity in that city at the present time. This organization has about 900 members, of whom approximately 50 per cent are skilled mechanics, 30 per cent ordinary laborers, and the remainder professional men, landlords, etc. Both services and commodities are exchanged, mainly on a barter basis but occasionally for cash.

There is no membership fee, though a small fee is contemplated, and no charge is made for the services of the exchange. The present functions of the exchange are simply (1) the keeping of files of members, with information regarding the services or goods they have to offer and desire in return; and (2) the arranging of contacts between members, the actual transactions being handled by the parties to the deals. Other contemplated functions have not been exercised, due to lack of funds required for initial operation. The Council of Social Agencies and other groups interested in unemployment have maintained a policy of using available funds for direct relief only.

Records of transactions are not made and it is impossible to state the number of transactions or the volume of business resulting from the contacts established through the exchange.

The nature of the work so far undertaken requires no elaborate organization. There is a president, a vice president, and a secretary, the present secretary being Dr. J. W. Parker, whose office serves without compensation as a clearing house for filing information and for making contacts between members. These officers form a board of directors. Membership is nonsectarian, nonpolitical, and non-racial, but the directors reserve the right to refuse membership to, or cancel the membership of, anyone whose character might be detrimental to the organization. In practice, membership at present primarily means registration for the purpose of utilizing the facilities of the exchange. So far there has been no general meeting of the members.

Usually the transactions effected through the exchange consist of direct barter between two members, but in a few cases coupons or due bills have been issued. An automobile mechanic, for example, desired insurance, and an agent furnished him with insurance in return for a coupon or due bill for an equivalent amount of automobile repair work. The insurance agent, in turn, had the privilege of indorsing this coupon and transferring it to another member who could supply goods or services desired by the insurance agent, and who desired an equivalent amount of automobile repair work.

The exchange is now working out the details of a proposed extension of the coupon or due-bill method of handling transactions. According to the plan, retail stores, garages, etc., and perhaps professional men as well, would issue to the exchange a limited quantity of due bills giving the exchange a legal claim on an equivalent amount of goods, with possibly certain types of services most frequently in demand also to be included. On the basis of these due bills barter money would be issued, which each member, within limits agreed upon, would accept from any other member. The exchange would reserve the right to present to any member for redemption at any time the due bills issued to it by the member, and to retire an equivalent amount

of barter money. In this way it is hoped to put soundly based barter money into effective circulation among the members, without the cost of establishing and operating an exchange store, and thus to facilitate an exchange of goods and services without the cumbersome work of bookkeeping and direct clearance through the exchange. Members from whom due bills would be received would be limited to individuals or firms of established reputation and responsibility. To provide for possible bankruptcies or delinquencies, a sinking fund would be maintained.

This plan, which entails a number of difficulties, but suggests interesting possibilities, is being subjected to intensive discussion and criticism with the idea of perfecting the details before an attempt is made to put it into operation.

MARCH 13, 1933.

The Dayton Mutual Exchange¹

THE Dayton Mutual Exchange was organized July 23, 1932, and was incorporated August 18. It grew partly out of the need for an outlet for clothing which was being made by a group of unemployed, the raw materials being furnished from private funds. It was chartered as a non-profit-making corporation by a group of 47 local citizens as charter members, and is governed by an executive committee of the members, of whom Elizabeth F. Haswell is president, Walter S. Carr, treasurer, and Lewis F. Carr, manager.

Its purposes, as set forth by the organizers, include the following: "It opens to the unemployed a way to exchange their idle labor power for food, clothing, and shelter. It purposes to aid local business men to move their surplus wares. It is intended to relieve the city, the county, and the Community Chest of the burden of supporting in idleness thousands of unemployed who have lost their purchasing power. It offers a substitute for money as a local medium of exchange."

The office and store of the exchange are located in a building furnished rent free and supplied with heat by the owners. In addition to these subsidies it has secured funds for necessary expenses requiring cash by the sale of what is called "scrip of the Dayton Mutual Exchange." This is issued for cash only and is redeemable only in goods certificates five years after date of issue. It is not a medium of exchange but is in effect a subsidy provided by well-wishers of the exchange, although if the exchange continues for five years and then has goods available for covering its outstanding goods certificates and scrip, the scrip can then be redeemed at face value, by means of goods certificates, in goods owned by the exchange. The amount of scrip outstanding on March 13 was \$430.

Goods certificates are issued in return for goods or services furnished to the exchange. They are printed by a cash register, with date, serial number, amount, etc., and a statement that the certificate "will be accepted at the value stated above in exchange for our goods as listed. It will not be redeemed for cash." Each certificate contains the printed signature of the president and the treasurer.

When certificates are issued for goods, the exchange usually allows the prevailing wholesale market prices. They are also issued for certain services, as for labor spent on making clothing out of cloth furnished by the exchange, the added value of the finished goods being regarded as justification for certificates being issued for such services. It is also stated that certificates are issued in part payment of managerial labor, but there is a reserve of goods in stock bought for cash received from scrip rather than for goods certificates immediately redeemable in goods. At the last inventory before March 13, the goods certificates outstanding amounted to \$470; goods owned amounted to about \$1,500, at retail prices; and goods in stock on consignment, to about the same value.

Goods are secured mainly from farmers, local craftsmen, and local firms, some of whom accept goods certificates or make barter arrangements among themselves through the medium of the exchange. An illustration of these barter arrangements which enable the exchange to add to its inventory is a complicated deal involving a newsprint

¹ The Cooperative Production Units of Dayton were described in the March, 1932, issue of the Monthly Labor Review.

factory, a newspaper, a raincoat factory, and a paint factory. By means of an interchange of newsprint, advertising space, raincoats, and paint, the exchange secured a supply of raincoats and paint and was enabled to barter a surplus for other kinds of goods. But such arrangements are complicated, require much contact work and ingenuity, and are not easily balanced in value. The number of such deals is therefore not large.

The goods certificates are accepted by a few local dealers, who ordinarily use them for paying their employees, these in turn redeeming them in goods at the exchange. Several dentists, doctors, and lawyers also have agreed to accept goods certificates from persons to whom they were originally issued, and in such cases the certificates are either redeemed by the professional men themselves or by their employees, to whom the certificates are paid as wages. In such ways the goods certificates have a limited local circulation as a substitute for money.

The exchange attempts to avoid competition with regular channels of trade by selling its goods, with a few exceptions, for goods certificates only. But it is necessary to use cash in securing certain essential goods and in meeting a part of its operating costs. In addition to cash from the sale of its scrip, the exchange has a small cash income from the sale of clothing made under its auspices to the city and the county for their relief agencies, and also from the sale of novelties and ornamental handicraft work. It sold a considerable number of living Christmas trees, and its sales of a single novelty, a "depression bug" made from the burr of the teasel weed and devised by a local craftsman, have gone beyond 2,000.

As a result of the attempts of the exchange to avoid competition, the attitude of local merchants is not hostile, but the activities of the exchange are restricted. Its monthly turnover of goods was as high as \$1,100 before the recent closing of the banks, and the tying up of bank deposits approximately doubled the amount of business. Nine families have been afforded direct employment to an extent which has enabled them to do without public relief, and a variable amount of aid, both direct and indirect, has been afforded a much larger number of unemployed town workers and hard-pressed farmers. Several barter transactions on a wholesale basis have not only increased the amount and variety of goods handled by the exchange but have had some effect in stimulating local industry.

It is hoped that the activities of the exchange can be expanded and made more effective in the resumption of the interrupted flow of goods and labor by means of contracts with perhaps 50 business firms for bartering goods and services through the medium of the exchange, the contracts to become effective when a specified number of firms have entered into such agreements. Efforts are also being made to arrange for more definite and extensive cooperation with farmers.

MARCH 17, 1933.

The Barter Movement, Oklahoma City

The Shirt Sleeve Exchange

THE Shirt Sleeve Exchange of Oklahoma City was incorporated October 12, 1932. The articles of incorporation state that it is to be "a benevolent association to facilitate exchange of services and commodities between the unemployed or partly employed and farmers for the purpose of removing surplus labor and surplus farm products from the market and for the further purpose of removing the pressure which the labor surplus and produce surplus exert upon prevailing wages and prices."

The exchange was an outgrowth of the Unemployed Workers' Union, which had been organized mainly for influencing local authorities in connection with relief programs. Partly because of the advice of interested citizens who were not members of the union, it decided to undertake self-help by means of a barter exchange. Most of the incorporators and officials were members of the Unemployed Workers' Union, but the secretary was a local business man.

The membership consisted of the incorporators. Those who desired to utilize the exchange simply registered with it, indicating the nature of the services or goods which they had to offer and which they desired in return. There were about 700 registrants, including unskilled workers, craftsmen, and a few members of the principal professions.

There was virtually no financial backing, although certain interested citizens furnished some of the necessary equipment; and some of the incorporators carried on most of the work without pay. It was hoped that the principal cost of operating the exchange could be handled by securing goods at wholesale prices by barter and selling at prevailing retail prices. The amount of work secured for the registrants is not known, as the exchange merely arranged the contacts between employers and workers, charged no commission, and made no follow-up for recording deals actually made. No production work such as canning, sewing, etc., was undertaken because of lack of resources.

A small store was established, and during the two and one-half months of its existence, it handled about \$1,000 worth of goods. The goods handled were secured from individuals who had second-hand articles which they offered for other goods; from farmers; from bakers (mostly unsalable bread); and small quantities from grocers and produce commission men in exchange for surplus produce.

In order to facilitate the exchange of goods and to encourage employers to hire labor through the exchange, due bills or receipts were issued. These receipts were for goods received, and they were used to a very limited extent by dealers and professional people in paying for work, the workers redeeming the receipts in goods at the store.

From its inception the exchange encountered serious and ultimately fatal obstacles, although legally it is still in existence. The management seems to have been diligent, conscientious, and efficient within the limits of its resources, but its resources were inadequate. A few individuals outside of the organization were helpful, but in general it failed to secure the support or even the acquiescence of the retail stores and the various controlling organizations. When it became apparent that the success of the barter movement could not be attained by means of the sponsorship of the unemployed themselves, the management agreed to the organization of a new exchange, with new articles of incorporation and a radically different sponsorship.

The Self-Help Exchange

THE new organization assumed the name of the Self-Help Exchange. A few of the incorporators of the Shirt Sleeve Exchange were included, but the president, the vice president, the secretary, and the treasurer are all leading business men. Of the 20 members of the board of directors, there are 12 business men, 2 civic workers, 1 lawyer, 1 architect, 1 farmer, and 3 who may be said to represent the original unemployed sponsors of the Shirt Sleeve Exchange. A statement issued by the officials of the exchange emphasizes the fact that it is approved by employers and merchants: "The exchange has the official endorsement of the Oklahoma City Retailers' Association and has the cooperation of all interested organizations and agencies, including the community fund and its affiliated agencies. The officers and directors of the exchange are substantial business men."

The exchange was organized on January 4, 1933. The new orientation is indicated by the articles of incorporation, in which it is stated that the purpose is "to carry on benevolent and charitable work, particularly to find employment for partially employed, with the right to set up an exchange with facilities for the exchange of labor or services or commodities."

About 1,500 registrants, mostly manual workers or persons willing to do general work, have filed their applications with the exchange. In addition, the Emergency Unemployment Relief Bureau, a quasi-public body which administers a comprehensive relief plan, makes available its file of applications of people who wish to barter their labor. The number of jobs filled is not known, because the exchange merely serves to make contacts possible between registrants and employers, and because some jobs are filled without the direct intervention of the exchange, by the payment of wages in the form of exchange scrip. The scrip comes into the hands of employers in two ways: (1) By the sale of scrip to employers for cash; and (2) by the acceptance of scrip, by employers, from workers or farmers who have secured it in return for goods. Work obtained on a barter basis by the Emergency Unemployment Relief Bureau and turned over to the exchange up to February 24 amounted to 88 orders.

The wages paid for labor and the hours and conditions of work are arranged by employers and workers. When an employer specifies the conditions, the exchange merely offers the job to a registrant, jobs being offered "in rotation and with the needs in each case in mind." An indirectly publicized rate of pay is 25 cents an hour, but there is a wide variation, not only for different kinds of work but for the same type of work.

A store has been established in a large building, the use of which has been granted to the exchange by the owners. Certain local firms furnished materials and equipment for remodeling the building, and the city paid for some of the labor required in preparing the building for use as a store. For the purchase of goods not available through barter, about \$400 in cash has been secured from employers from the sale of exchange scrip, the purchasers being encouraged to use the scrip in paying wages, the workers in turn to redeem the scrip in goods. Some second-hand goods have been secured from individuals, and small quantities of produce from farmers, in return for scrip. The store was opened February 1, 1933. During the first two weeks

in March, the turnover was about \$300. Goods in stock are valued at about \$500 at wholesale prices.

Scrip is issued in several denominations. The terms are stated on the face of each certificate as follows: "The Self-Help Exchange, an Oklahoma corporation, agrees to deliver to bearer hereof on demand in return for this exchange certificate 10 cents (or the amount of the certificate) in goods or services on hand at the time of presentation at the then market price at its place of business in Oklahoma City, Okla., subject to the conditions on the reverse hereof." On the reverse, one of the conditions is to the effect that the certificate shall be void unless presented within 60 days after the publication of any notice in a daily newspaper requiring redemption. The amount of scrip issued by the middle of March for cash and for goods was about \$900.

The small volume of business is due in part to the fact that the exchange has not been long in operation, and in part to apathy on the part of the unemployed, combined with apprehension that the exchange may be utilized by employers as a source of cheap labor for regular work as well as for "made" work not otherwise available.

MARCH 17, 1933.

"Barter Day" in Logan, W. Va.

LOGAN, W. VA., is in a region which was originally settled by poorer classes of whites who found it impossible to compete with negro labor in the lowlands, and who managed to live meagerly but independently by cultivating the hillsides and the narrow valleys. With the growth of the coal industry, they surrendered title to the land and gave up the tilling of the soil for wage work in the coal mines. With the decline of the coal industry they lost for the most part the opportunity for making a living as miners, and having already given up their claims to the land, they now find themselves economically helpless.

The extreme distress of the people led the American Friends' Service Committee to accept a local invitation to undertake relief work. A part of the work of the committee has been the sponsoring of barter activities. But the destitution of the miners has been so prolonged and has become so extreme that they have little to offer for other goods. During a barter day, for example, when the weather was rainy and severely cold, a miner offered to barter his coat for some clothing for his baby. The committee found it necessary to provide a supply of goods as a nucleus for bartering, and as far as possible to create opportunities for work in return for goods. In the case of the man who offered his coat for baby clothes, for example, the clothes were supplied in return for work by his wife in washing and mending second-hand clothes received from others.

The first barter day was held January 14, 1933. In preparation, publicity was secured in the local papers, cooperation of high-school students and others was arranged for, and a circular was distributed. The circular, in display type, read as follows: "What Have You To Swap? Buy without money but not without your money's worth! Do you have an old rocking chair that you would like to swap for an ironing board? Would you give a raincoat for a sack of potatoes? Is that old rooster worth 3 quarts of pickled beans? Then don't miss the barter day next Saturday. Bring something to swap and bring your friends. January 21, at 2 o'clock. Adjacent to the freight station, Logan."

The number of people participating has usually been about 70 each week, in spite of the fact that on every barter day since the beginning the weather has been either rainy or cold. The types of barter carried on consist of exchanging of goods among individuals who attend ("swapping" as at the ancient fairs and market days), and exchanging of goods brought in by people of the community for goods furnished by the committee. The committee furnished 200 pairs of new shoes and 100 union suits, and small quantities of goods were donated by local residents. Goods received in return by the committee consisted mainly of canned fruit, pickles, and second-hand clothing. The participants found considerable interest, so it is reported, in the kinds of transactions often made. For example, a pair of shoes was traded for an overcoat, the overcoat for a hog, and the hog for carpentry work at the committee's headquarters. A pair of shoes was traded for a woman's suit, a can of pickles, and two jars of jelly. An old man bartered a woman's coat for a pair of spectacles which happened to be adapted to his eyes. Popular interest in the seemingly trivial phases of barter day has its value in

affording a weekly opportunity to get together and enjoy a certain amount of diversion. It is reported that the occasion has had a noticeable effect in relieving the gloom of the depression.

It is realized that the amount of goods available for barter is severely restricted and efforts have been made to arrange for the bartering of labor and for productive activities such as would add to the store of goods and at the same time afford wholesome employment. A small sewing room has been provided. A limited number of opportunities for work resulted from arrangements for cleaning up certain mining camps in return for goods. Efforts are being made to increase the opportunities for productive work.

It is also hoped that the work can be expanded by means of a registering of goods and labor available for barter, thus facilitating the interchange of both services and merchandise between barter days. With the opening up of the farming season the interchange of surplus farm produce is also expected to increase the volume of barter.

Adjacent communities have also become interested in the plan, and in some of these communities, not only the mining camps but near-by towns, such as Morgantown, definite moves have been made to adopt the same or similar methods.

MARCH 24, 1933.

The Barter Movement in Memphis

THE Unemployed Citizens' League of Memphis was organized December 8, 1932, with a constitution and general organization based on the Seattle plan.¹ It had the support, not only of unemployed workers, but also of certain public-spirited citizens who were interested in the problem of self-help among the unemployed.

At the time of organization a small store was opened, the stock consisting mostly of groceries secured either for cash or as donations from wholesalers. A few second-hand clothes, articles of furniture, etc., were secured by bartering the labor of members for goods. But persons with goods usually put a valuation on them so far beyond sale value in a store that this source of merchandise was severely restricted. Due bills are issued, good only for merchandise in stock at the store. No produce has been secured as yet from farmers. It is primarily a cotton country, and farmers have little produce to sell or barter. Goods received during the period from February 11 to 28 were valued at \$87. From March 1 to 20, goods sold amounted to only \$32.86.

The principal work done by members for the organization has consisted of wood cutting. The sale of wood enabled the organization to secure money for part of its stock of goods. A few shirts have been made for members and, on order, for others. The volume of employment secured for members has been very small. From February 11 to 28, such jobs afforded wages in cash or barter amounting to \$23.85; and from March 1 to 20, to only \$6.50.

The organization has been restricted, not only by lack of resources, but also by grave dissensions among its members, one faction even bringing suit against another. But a reorganization has been effected, there is some evidence of renewed interest, and with the opening up of seasonal work in the spring it is hoped that a greater measure of success may be achieved.

On March 4 there was held at the municipal auditorium and market place a widely advertised "barter day" and public auction. The volume of business is not known, as those in charge of arrangements merely provided facilities for individual bartering. The success was not so pronounced as to lead to a weekly repetition, but plans are under way for a similar arrangement, the day to be devoted to a combination of bartering, auctioneering, and special sales by local merchants.

A plan for "making" work was sponsored by the employment bureau of the American Legion. The bureau sold 5,400 day's work tickets at \$1 each. These tickets were handled by the bureau, and the money was turned over to the mayor's relief fund. Workers who went out on the dollar-a-day jobs were paid in groceries from the municipal supply depot.

MARCH 21, 1933.

¹ A description of the Seattle plan will appear in the May issue of the Monthly Labor Review

The Barter Movement in St. Louis

IN JUNE, 1932, an Unemployed Citizens' League was organized at St. Louis. It was based on the Seattle organization's plan¹ and was sponsored by a small group of individuals not themselves unemployed but interested in the problem of unemployment. It also had the backing of the League for Independent Political Action. A parent group was organized and several locals were formed. Each member of a local was expected to fill out a "Citizen's registration questionnaire and application for membership." The questions concerned not only the economic status of the applicant but also matters pertaining to his relations to politics and trade-unionism.

The following comprehensive plan of action was widely advertised:

Purpose: To form an organization of the unemployed for the purpose of cooperative self-help by an exchange of services for:

1. *Food*.—Produced, canned and distributed through commissaries operated by themselves.

2. *Clothing*.—Made and distributed by the unemployed through above commissaries.

3. *Housing*.—In exchange for repairs and reconditioning of vacant building, the occupancy of the building is to be had.

4. *Fuel*.—To be secured in coal mines not now operated because they are unprofitable, in exchange for foods and labor.

5. *Health*.—To utilize the unemployed nurses and those of the medical profession who are willing to cooperate in maintaining a high standard of sanitation, food inspection, and hospitalization.

6. *Recreation*.—To fill the need of all people for some play, we propose to take over available vacant lots for horseshoe pitching, indoor, and other recreational activities.

7. *Education*.—To train the unemployed to become more efficient workers and enabling them to raise their standard of living so that they may live more fully.

No salaries are to be paid to anyone connected with the organization.

Before any significant work was done toward the carrying out of this program, factional differences and local opposition developed. Hoped-for contributions from the social agencies and individuals were not forthcoming. The members themselves, for the most part, were almost destitute of resources except for their willingness to work, and not having anything tangible to absorb their energies, they seem to have devoted themselves to talking about what ought to be done. The result was a break-up of the league into factions.

Evidences of concrete action in the way of self-help are extremely limited.

(1) Last fall some of the members of the league made arrangements with some farmers to dig their potatoes in return for a part of the crop. Second-hand trucks were secured and enough gasoline was obtained to enable the group to carry out the arrangement. But it was found that the cost of gasoline and necessary work on the trucks amounted to more than the market price of the potatoes obtained.

(2) Another group, in a colored section, occasionally held meetings for carrying on such activities as sewing and canning.

(3) A third group puts on an occasional show in a vacant theater in cooperation with a local drama league. The admission charge is payable in money or in goods. The work of this particular group is apparently more largely educational and propagandist than economic.

(4) Some unsalable bread was secured from bakeries and distributed among the members.

MARCH 9, 1933.

¹ A description of the Seattle plan will appear in the May issue of the Monthly Labor Review.

EMPLOYMENT CONDITIONS

Cooperative Farm Plan of the B. F. Goodrich Co.

AN ACCOUNT of the manner in which the B. F. Goodrich Co., Akron, Ohio, met the problem, during the past year, of providing adequate subsistence for former employees and employees on part time is given in a pamphlet issued by the company entitled "Industrial Cooperative Gardening."

The steadily increasing unemployment during the winter of 1931-32, with the consequent increase in charity requirements, which stimulated the development of various plans in different localities prompted the company to undertake a cooperative gardening plan which would utilize the idle time of these workers and avoid the necessity of their being placed on the charity rolls. As the buying power of the employees to be assisted was either extremely limited or entirely non-existent, it was felt by the company that established producing and marketing facilities would not be disturbed under a plan by which the men consumed what they produced but which created no surplus for sale or barter. These employees and former employees, for many of whom there was little hope of recall to occupations for which they had been trained, had generally satisfactory labor records and the company was interested therefore in developing an adequate relief plan for them.

After consideration of the problem by plant superintendents and officials, it was decided that a project was required which would provide 150,000 man-hours of work during the summer months and assure the participants as great a reward as possible. As a cooperative farm operated on mass production principles seemed the most practical solution to the problem, the Akron Community Gardens (Inc.) was formed and the industrial gardening experiment, embracing about 200 acres of vegetable planting, was established. The managers of the experiment had the advantage of the company's experience with mass industrial production, the principles of which it was determined could be applied to the raising of crops, thus assuring constant, uniform care, maximum yield, and equitable distribution. It was considered that the allotment of small plots of land for individual gardens, which had been done in many parts of the country, failed to meet the situation, since in general persons attempting to work such gardens were without experience and could rarely be given sufficient direction to secure satisfactory results. As the company had no similar experiment in mass gardening to guide it, conferences were held with various agricultural agencies of the State and city authorities concerned with relief organizations. It was estimated that a maximum of 750 former employees and part-time workers would enlist in the movement during a 25-week period, and leases were secured early in May on about 275 acres of land situated about 5 miles from the Goodrich factories, 200 acres of which were suitable for the raising of vegetables. A certain amount of

preparatory work, such as removal of brush and débris, was required and plowing was started as fast as the land could be made ready. Drainage ditches were dug and the necessary buildings for care of the workers and the produce were erected. After the start men enrolled rapidly and a labor rotation plan was established, in most cases the individual working one 8-hour day a week. The best seed and potatoes were purchased for planting and the seed potatoes were prepared under the direction of an expert potato grower. The men were divided into squads under the direction of one of their number, and it was noted throughout the season that the men who had the best shop records in almost every instance made the best garden workers, giving a striking demonstration of the flexibility and adaptability of the industrial worker. Transportation to the farm was provided by the company, first by company trucks and later by bus; necessary specialized workers were provided; and seeds, equipment, and miscellaneous items were furnished by the company at a total cost of between \$9,000 and \$10,000.

The first distribution of vegetables was made on June 23, the vegetables being gathered by one crew and bunched and wrapped by another group. This plan was followed throughout the season and enabled 125 men to obtain a 2-bushel bag and a basket of vegetables in three minutes at the end of the day. The distribution house was 36 feet long and the produce was stacked back of the counter on alphabetically marked shelves, disbursement being made to the men who lined up under the various letters at quitting time.

In many ways, it is said, the regular routine at the farm resembled that of any army post. The roll was called in the morning before the men went into the fields and the work for the day was detailed to the various squad leaders. Tools were issued to the workers, who returned them to their designated places at night.

In the division of the produce account was taken of regularity of attendance, extra work, and the time of the season during which the worker joined the program. The total value of the produce grown divided by the total number of man-hours gave the value per hour, and with this rate and the worker's total time the credit for each participant was computed. The average rate per day, figured in produce amounted to \$1.60 and compared favorably with the average daily farm wages of \$1.60 to \$1.75, which were paid in that part of the State in the summer and fall of 1932. After the seasonal distribution of green vegetables, the balance of time invested by each worker was compensated by the equivalent value in potatoes, navy beans, corn meal, and rolled oats, the two latter commodities being obtained from a suburban mill in exchange for corn on the cob at wholesale rates. A total of 936 men took an active part in the gardening, working from a minimum of 4 hours to a maximum of 290 hours, or an average of twelve 8-hour days per worker. The total man-hours worked amounted to 110,000, but it was found that the same crops with the same methods of cultivation could have been produced with a maximum of 75,000 man-hours, so that it may be considered that the extra hours represent "made work."

It was at first thought that the large amount of surplus produce should be placed with a canning plant, but as the local canneries were equipped to handle only certain types of vegetables this plan was abandoned and the workers' families were encouraged to do their own

canning and preserving. In general, excellent results were obtained from the home canning, one worker's family, for example, canning 1,000 jars of food for the winter months.

The following table shows the total acreage planted, the total yield, and the yield per acre of the Goodrich gardens:

ACRES PLANTED, TOTAL YIELD, AND YIELD PER ACRE OF SPECIFIED CROPS OF THE B. F. GOODRICH CO. COOPERATIVE GARDENS, 1932

Crop	Acres planted	Total yield	Yield per acre
Potatoes.....	63.0	6,627 bushels.....	105 bushels.
Navy beans ¹	40.0	20,647 pounds.....	3,310 pounds.
Field corn ²	25.5	1,000 bushels.....	39 bushels.
Sweet corn.....	11.0	5,815 dozen.....	525 dozen.
Tomatoes.....	9.5	73,724 pounds.....	7,750 pounds.
Cabbage ³	8.5	101,937 pounds.....	12,000 pounds.
Green beans.....	8.1	28,428 pounds.....	3,520 pounds.
Turnips.....	7.6	5,493 pounds, greens.....	720 pounds.
Beets.....	3.8	53,670 pounds, turnips.....	7,050 pounds.
Peas.....	3.0	18,762 pounds.....	492 pounds.
Pumpkins.....	3.0	2,870 pounds.....	955 pounds.
		9,026 pounds.....	3,010 pounds.
Peppers.....	2.0	1,600 dozen, sweet.....	800 dozen.
		5,791 dozen, hot.....	2,895 dozen.
		9,755 dozen, cayenne.....	4,875 dozen.
Carrots.....	1.2	7,193 pounds.....	6,000 pounds.
Kale.....	1.1	8,294 pounds.....	7,500 pounds.
Summer squash.....	1.0	11,590 pounds.....	11,590 pounds.
Spinach ⁴	1.0	115 pounds.....	115 pounds.
Onions.....	.6	2,300 dozen, green.....	3,830 dozen.
		787 pounds, dry.....	1,310 pounds.
Swiss chard.....	.5	487 pounds.....	970 pounds.
Radishes.....	.4	1,233 dozen.....	3,080 dozen.
Mustard.....	.3	853 pounds.....	2,840 pounds.
Lettuce.....	.2	117 pounds.....	585 pounds.

¹ 40 per cent of the navy bean crop picked green due to lateness of maturity and pending frost.

² In addition to this field-corn acreage, 100 acres owned by near-by farmers were husked on a share basis. Total bushelage 1,774, which was traded on the cob for 16,344 pounds corn meal and 5,000 pounds oatmeal.

³ Yield figures do not include 2,139 pounds of sprouts.

⁴ Crop failed due to poor location and dry season. Total plantings 191.3 acres. Total acres used 184.3.

The experience with the cooperative gardens in 1932 brought out the following points which are of importance in carrying out such a program. It was found that plantings should be planned so that regular produce distributions may be made as soon as growing conditions will permit, and, in order to secure a more equal distribution of produce among the men, no one should be allowed to start on the job after heavy daily distributions are under way. Plantings of navy beans and of field corn were found not to be economically sound even though dry beans and corn meal are staple articles of diet, as the cost of raising and preparing the crop for use more than offsets the value of the yield. Machine planting, power spraying, and machine digging, though costly, were found to be advisable where large acreages of potatoes are planted because of the increased yield and thorough harvesting. It appears true that the majority of men with industrial training, even without farming experience, adapt themselves readily to mass gardening as they know how to absorb instructions. The practical limit for effective supervision and work on 200 acres of plantings was found to be between 125 and 150 men per day. On this size program it is said that one day's work a week from May to October, inclusive, will provide a man with more than a ton of produce.

The company plans to sponsor a similar garden program for 1933 which will provide for the families for a 9-month period. It was found that the element of waste made it undesirable to try to provide these

foods for a whole year, even though some families do conserve through canning a large part of the produce which lends itself to canning, using the nonpreservable vegetables during the summer months, as others allow the excesses beyond their current food requirements to spoil. The new program will provide for a maximum of 750 workers, and it is hoped the maximum force will be reached by August 1, which will insure sufficient labor for planting, cultivation, and harvesting. The fact that because of the newness of the project men were slow in making their applications and many did not start before harvesting began last fall resulted in only 549 out of the total number of 936 men who had worked at some time on the gardens receiving part of the final distribution. Although all received equal values for the time worked through the daily distributions, the final allotment in larger quantities to those who had worked for the longer periods made their share appear relatively larger and an unbalanced condition of this sort, it is said, is conducive to dissatisfaction. The estimated amounts available in 1933 as a result of the plantings which have been planned will meet the weekly vegetable needs of these workers and their families on approximately the same basis as the needs which have been determined by the best dietary authorities. The project, in addition to supplying so large a part of the food needs of the workers, had the added value, it is said, of improving both their mental and physical health through the stimulus of being engaged in productive work and the healthful effects of work in the open air.

Conditions in Families of the Unemployed in Philadelphia, May, 1932

SINCE 1929 the industrial research department of the Wharton School of Finance and Commerce, University of Pennsylvania, has conducted annually an unemployment survey in Philadelphia. These surveys cover small sample sections in various parts of Philadelphia, but it is stated that a check of these sample areas with the 1930 census indicates that the persons and families covered in the surveys are representative of the city's whole population. At the time the unemployment survey of May, 1932, was being planned it was decided to make also a survey of family conditions. The 35,471 families included in the unemployment investigation, however, were too many to interview in regard to their detailed conditions, so a sample of 9,591 families was selected as reasonably representative of the larger group, which in turn, as said above, was representative of the city as a whole. The findings of this survey made by the industrial research department in cooperation with the service committee for professional and business women are presented in Special Report No. 5 (mimeographed), February 23, 1933, of the department.

Table 1 shows the number and per cent of families included in the survey who were in distress and the reasons for such distress, also the estimated number of families in the city suffering from each kind of distress, on the assumption that the findings of the survey are representative of Philadelphia as a whole.

TABLE 1.—NUMBER AND PER CENT OF FAMILIES IN DISTRESS IN PHILADELPHIA, MAY, 1932, BY KIND OF DISTRESS

Kind of distress	Families in distress		
	Disclosed by survey		Estimated number in city
	Number	Per cent	
Insufficient food.....	997	10.4	47,800
Insufficient clothing.....	824	8.6	39,500
Insufficient heat.....	1,112	11.6	53,300
Evicted for unpaid rent.....	349	3.6	16,500
Lack of medical attention.....	348	3.6	16,800
Loss of home ownership.....	340	3.6	16,700
Loss of furniture.....	110	1.1	5,300
Total in distress.....	3,434	35.8	164,700
No distress.....	6,157	64.2	295,300
Total, all families.....	9,591	100.0	460,000

Insufficient heat was reported when the family was found to have no cooking heat or was obliged to wear extra wraps in the home. Many houses had no heat at all except while meals were being cooked. Other families had to use their neighbors' stoves to cook the meager food supplied them by relatives, friends, or relief organizations. Some families had to remain in bed a substantial part of the colder days to keep warm.

Of the 9,591 families covered by the investigation, 1,478 or 15.4 per cent had insufficient food, clothing, or home heat when the survey was made. If conditions in these families were representative of conditions throughout Philadelphia there were in May, 1932, approximately 71,000 families in that city with inadequate food, clothing, or home heat. Many families were suffering from two of these three types of distress and there were other families inadequately provided with all three necessities.

Based on the survey figures, it was estimated that in Philadelphia, May, 1932, about 48,000 families did not have enough food to prevent actual hunger among family members and approximately 39,500 families had members who "had no shoes or lacked other items of clothing essential to body comfort."

Lack of needed medical attention was reported by 3.6 per cent of the families surveyed. This percentage represents an estimated 17,000 families in the city. It may be asked why a family should lack medical care when free attention is obtainable at several hospitals and clinics in the city. The answer is that many families have no means of transportation; others do not know of the free service available; some have never had to rely on free medical attention and are reluctant to seek it for the first time; and finally, the hospitals and clinics hesitate to grant free service to families that are not pauperized. Families in this latter group present the most serious problem of all. Many of these families could pay for needed medical attention, but only by foregoing other needs that they consider more essential. As a consequence they postpone obtaining the needed medical attention, hoping, in many cases vainly, that a few months later the family will be able to afford medical attention without so great a sacrifice of other needs.

In Table 2 the percentage and number of families who received and gave specified types of help during the depression are reported. It will be noted that 19.7 per cent of the families had spent all their savings, that 18.4 per cent directly helped relatives or friends, and

that 9.8 per cent shared their homes with others. Of the group suffering from insufficient food, clothing, or heat, 39 per cent were reported as unable to pay store bills.

TABLE 2.—SOURCES AND FORMS OF ASSISTANCE RECEIVED AND AID GIVEN BY FAMILIES IN PHILADELPHIA DURING THE DEPRESSION

Source and form of assistance received and help given	Total families		Families with—

Total.....	98.9	88.8	98.0	87.6	92.3	57.6	94.0	71.6

Of all the families included in the survey, 45.8 per cent owned or were purchasing homes. About one-fourth of the group of families with insufficient food, clothing, or heat owned their homes. Of the families in this group who owned or were buying homes, 90.5 per cent had mortgages, 71.5 per cent were in arrears in their mortgage payments, and 64.7 per cent were behind in their taxes. Slightly over 77 per cent of the renters in the same group were back in their rent.

According to the report "our public and governmental relief has fallen far short, both extensively and intensively, of meeting the needs of the people. Distress is much more prevalent now than it was in May, 1932, and the lower income groups are much less able to help each other than they were then."

Report of South African Unemployment Investigation Committee

THE South African Government, faced with the necessity of dealing with widespread unemployment and destitution, appointed a committee to consider and report upon permanent measures of relief or, preferably, of prevention, which could be set up after the immediate crisis is over. The committee was to report especially upon the advisability of creating "a special permanent fund for preventing and relieving acute and prolonged unemployment created by any cause which would bring about such depression that a considerable proportion of the workers would be thrown out of employment." If the creation of such a fund should appear desirable it should further report upon the proper amount and the means by which it should be raised, the manner of administration, the purposes to which it should be applied, the extent and manner of cooperation between the general government and the local authorities, and similar matters. The committee held public hearings, collected the views of organized employers and workers, consulted public bodies and organizations interested in the care of the unemployed, and in general sought to secure a broad view of the situation. A report containing their conclusions has recently been issued.

Reviewing the industrial development of South Africa, the committee concludes that unemployment, to some extent, is a permanent feature of its industrial system, and that while depressions like the present enormously increase its amount and severity, it is bound to become more and more serious, even in normal times.

Most of the witnesses, particularly those representing workers' organizations, were emphatic that, as a result of the rationalization of industry, the ceaseless introduction of labor-saving devices, and the natural growth of the population, unemployment should be regarded not only as a permanent feature of the social structure, but as an ever-growing national evil. What might have been regarded as an abnormal state of unemployment, say 10 years ago, may have to be regarded now as normal, and in 10 years' time the present state of unemployment may in all likelihood be regarded as nothing unusual.

There is little to be hoped for from a policy of trying to direct the superfluous workers to the land, for they have not the necessary capital, training, and skill to become independent farmers, and, since the agricultural development of the Union has been based upon the large supply of exceedingly cheap native labor, there is no opening for them as farm hands.

It has been suggested that pressure should be brought to bear upon and appeals should be made to farmers to employ "poor whites" instead of native or colored labor, but we find, after careful investigation, that as a rule it is not economically possible for farmers to employ European labor at a living wage. In some instances a European may be employed as foreman, but in the great majority of cases the farmer is forced to be his own foreman, as the uncertain revenue derived from his farming operations does not warrant the payment of a foreman's salary.

Moreover, the substitution of white for colored laborers would, of course, change only the incidence of the unemployment problem, not its scope.

Former commissions have dealt with the question of unemployment insurance and have held that owing to the situation created by the large employment of natives, its establishment is hardly practicable. This conclusion the present committee indorses.

Reviewing the whole situation, the committee concludes that there is ample reason for creating a special permanent fund for preventing and relieving acute and prolonged unemployment, and that while this should be primarily for meeting depressions like the present, its use should not be confined to them.

Statistics collected by the department of labor indicate that during prosperous years it was found necessary to provide relief works for some thousands of men who were not able to secure work on their own. From this it would appear that even when trade, industry, and agriculture are flourishing, there may be such a degree of unemployment in some areas that it would be necessary for resort to be made to the fund.

The fund, it was decided, should be not less in amount than £5,000,000 and should be appropriated from the general revenue. Two members dissented from this recommendation, holding that it should be raised by means of a tax on wages, salaries, and income generally of approximately 3d. on the pound on all income of not less than £1 a week. Four members held that the amount of the fund should be "not less than £3,000,000, contingent upon not less than a further £1,000,000 being provided annually for public buildings." The recommendation as to the amount was, therefore, carried by a vote of 5 to 4, and that as to the method of raising the fund by 7 to 2.

The fund should be administered by a board of five, representing the Government, the rural community, the employees, the employers, and the local authorities. The members should be appointed by the governor general for a term of four years and should be eligible for reappointment. The fund should be used to make grants to Government departments, local authorities, public bodies, and provincial administrations, in order to aid in carrying out public works for the purpose of preventing or relieving unemployment during periods of severe depression.

INDUSTRIAL ACCIDENTS

Accidents in Manufacturing Industries, 1926 to 1931

THE results of the Bureau of Labor Statistics' annual survey of accidents in manufacturing industries for 1931 show a substantial decrease in accident frequency and severity rates for that year, as compared with 1930. An average of 18.85 accidents occurred in the combined industries during 1931 for every 1,000,000 man-hours worked, a decrease in the frequency rate of 18.3 per cent. An average of 2.59 days were lost, including scheduled allowances for deaths and permanent disabilities, for every 1,000 man-hours worked, a decrease in the severity rate of 8.2 per cent.

Distribution of the accident frequency and severity rates, for the combined manufacturing industries in 1931, by extent of disability, is shown in Table 1, with comparative yearly data for the five previous years, 1926 to 1930, and the yearly percentage of change. These rates were computed from the records of the establishments in all of the States covered by the survey, and weighted according to the total number of wage earners employed in each industrial group, as given in the reports of the United States Bureau of the Census.

TABLE 1.—ACCIDENT FREQUENCY AND SEVERITY RATES IN MANUFACTURING INDUSTRIES, 1926 TO 1931 (WAGE EARNERS ONLY)

Year	Deaths		Permanent disability		Temporary disability		Total			
	Fre- quen- cy rate	Se- ver- ity rate	Fre- quen- cy rate	Se- ver- ity rate	Fre- quen- cy rate	Se- ver- ity rate	Frequency		Severity	
							Rate	Per cent of change, as com- pared with preced- ing year	Rate	Per cent of change, as com- pared with preced- ing year
1926.....	0.16	0.98	1.27	1.18	22.73	0.46	24.16	-----	2.62	-----
1927.....	.17	1.05	1.22	1.12	21.21	.41	22.60	-6.5	2.58	-1.5
1928.....	.18	1.08	1.32	1.16	21.02	.40	22.52	-4	2.64	+2.3
1929.....	.15	.91	1.38	1.12	22.45	.40	23.98	+6.5	2.43	-8.0
1930.....	.17	1.06	1.41	1.34	21.50	.42	23.08	-3.8	2.82	+16.0
1931.....	.15	.90	1.30	1.35	17.40	.34	18.85	-18.3	2.59	-8.2

As shown in the table, the average frequency rate for the combined industries declined from 24.16 in 1926 to 22.52 in 1928, but increased to 23.98 in 1929, then declined again and reached the lowest level (18.85) in 1931, a decrease for the period of 22 per cent. The average severity rate declined and advanced alternately, from 2.62 in 1926 to 2.59 in 1931, a decrease for the period of 1 per cent.

The following chart shows the trend of the average frequency and severity rates for the combined manufacturing groups during the 6-year period, 1926 to 1931.

These rates differ somewhat from the rates published by the National Safety Council in the 1932 edition of its Accident Facts. The differences are presumably due mainly to the difference in industries, plants, and occupations covered in the two surveys. The report of the National Safety Council covers the experience of its membership establishments, all of which are presumably interested and active in safety promotion, and consequently may present more favorable rates than the survey by the Bureau of Labor Statistics, the coverage of which is probably more general in character. Also, the National Safety Council includes in its figures industries other than manufacturing, and clerical employees as well as wage earners,

Trend of Accident Frequency and Severity Rates in Manufacturing Industries, 1926-1931

whereas those of the Bureau of Labor Statistics are limited to wage earners.

Individual industry rates, by extent of disability and by years, are shown in detail in Table 2. These rates were computed from records of establishments in the States for which all accidents resulting in disability extending beyond the day of injury are reported. It has been found that this selection constitutes a fairly representative cross section for each of the selected industries, and that the rates for the various industries are comparable. It must, however, be taken into consideration that, in using only such records, several important States are omitted from this compilation and that neither the number of workers nor the number of accidents in any one industry is comparable with the same item for another industry.

The industrial accident surveys of the bureau covered approximately 10 per cent of the total wage earners in the respective industrial groups in 1926, 21 per cent in 1927, 21 per cent in 1928, 25 per cent in 1929, 37 per cent in 1930, and 44 per cent in 1931.

TABLE 2.—NUMBER OF ACCIDENTS AND ACCIDENT FREQUENCY AND SEVERITY RATES FOR WAGE EARNERS IN SPECIFIED INDUSTRIES, 1926 TO 1931

[Frequency rates are based on 1,000,000 hours' exposure, severity rates on 1,000 hours' exposure]

Industry and year	Number of full-year workers	Death			Permanent disability			Temporary disability			Total

These surveys covered 29 manufacturing groups for 1926, 1927, and 1928. Separate figures were available in 1929 for logging operations, which were previously included in the classification "lumber—sawmills." Consequently a new classification, "logging," was added in 1929, making 30 groups in all. The separation is noticeable in the accident rates for sawmills, which dropped considerably in 1929 through the elimination of the more hazardous logging operations.

While both frequency and severity rates for the combined groups declined in 1931, as compared with 1930, some of the individual groups show increases in rates. Frequency rates increased 1.30 for boots and shoes, 2.47 for carpets and rugs, 2.16 for fertilizer, 18.55 for sawmills, 7.23 for shipbuilding, and 4.42 for stamped and enameled ware. Decreases for the other 24 groups ranged from 0.15 for automobiles to 19.44 for planing mills. Severity rates increased 0.4 for automobiles; 0.79 for automobile tires; 0.13 for boots and shoes; 2.33 for brick, tile, and terra cotta; 0.71 for carpets and rugs; 0.75 for foundry and machine shop products; 0.4 for glass, and for iron and steel; 5.65 for logging; 3.39 for sawmills; 0.18 for pottery; 0.13 for steam fittings, apparatus, and supplies; 0.79 for stoves; and 0.12 for woolen goods. Decreases for the other 16 groups ranged from 0.34 for furniture to 1.59 for petroleum refining.

HEALTH AND INDUSTRIAL HYGIENE

Health of Insured Wage Earners During 1932

THE report¹ of the Metropolitan Life Insurance Co. concerning the health record in 1932 of the many millions of industrial policyholders of the company indicates that the year's health record, as shown by the mortality records, was the best that has ever been recorded. In view of the large number of industrial policyholders, it is considered that it is safe to say that the death rate of the general population in 1932 reached a new low point, the mortality rate of this group of insured persons having always proved to be an accurate index of health conditions in the general population.

The death rate for 1932 among insured persons was at the unprecedented figure of 8.34 per 1,000 living, at ages 1 and over, the previous minimum, 8.37, having been registered in 1930. During 1932 new minimum records were established for nine important causes of death, namely, typhoid fever, measles, whooping cough, diphtheria, pneumonia, tuberculosis, diarrheal diseases, conditions associated with pregnancy and childbirth, and accidents. Also, among the various causes of accidental death reductions from the previous records were shown for accidental burns, machinery accidents, and drownings.

It is pointed out that the extremely low death rate in 1932 was reached in spite of the unfavorable economic conditions which continued throughout the year and which seriously affected the living standards of industrial workers and their dependents. In spite of the fact, however, that more workers were unemployed than ever before and that they were subject to the worries which unemployment brings, the health of the insured group has been exceptionally good. In discussing the factors which have contributed to this result it is said that the most important cause was the almost entire freedom from serious epidemics during 1932. There was no widespread epidemic of any disease until influenza became prevalent, and in some localities virulent, toward the last of the year. In addition to the freedom from epidemics the weather conditions were good throughout the year and many persons undoubtedly spent more than the usual proportion of their time out of doors. It is said, too, that the depression has unquestionably curbed overeating and overdrinking, and with the reduction in the amount of traffic there have been fewer deaths chargeable to motor vehicle traffic, while the number of industrial accidents has also been reduced as a result of the reduction both in the number of employees and the hours of work. All these factors, it is said, have evidently more than offset the adverse effects of the worry incidental to unemployment and reduced circumstances. Another most important factor in the favorable health showing has been the protection given by the effective functioning of health departments and clinics and the well-organized relief work which has resulted in the conservation of life and health. As a result of economic conditions radical

¹Metropolitan Life Insurance Co. Statistical Bulletin, January, 1933.

curtailment is taking place, however, in the support of health and social agencies, and the report carries the warning that if States and cities continue to cut appropriations for these purposes a serious menace to the preservation of the public health will result.

Lower mortality rates than ever before were registered in 5 of the 12 months of 1932, and during all the other months, with the exception of December, conditions were excellent. In December, however, the mortality from influenza, pneumonia, and the principal degenerative diseases rose sharply, due to the wave of influenza which started on the Pacific coast and swept the country. Although the influenza was in general of a less virulent type than in the great pandemic of 1918-19, the deaths even in a relatively minor outbreak are sufficiently numerous to raise the mortality rate appreciably, and as a consequence the mortality rate for December for all causes of death was 9.4 per 1,000, the highest December figure since 1924.

The actual number of deaths among policyholders aged 1 year and over in 1932 was 139,491, which would have been increased by nearly 70,000 if the 1911 death rate of 12.5 per thousand had prevailed. In comparison with the mortality rates for the general population covering practically the same age groups the rate of decline in mortality among insured wage earners and their dependents during a period of 22 years has been more than twice as great. This saving in lives amounted in 1931 alone to 32,000 lives, or since 1911 to over 464,000 lives, the favorable showing having been brought about largely by the various medical and welfare features carried on by the Metropolitan for the benefit of its policyholders.

The average life span of this group has been extended from an expectation of life at birth of 46.63 years in 1911 and 1912 to 57.90 years in 1931, a gain of 11.27 years, or 24.2 per cent. In the general population, during approximately the same period, the gain was only 6.66 years. This improvement in the expectation of life in the industrial population has brought the life expectancy to within two years of that of the general population, whereas 20 years ago there was a difference of six and one-half years in favor of the general public. The improvement has taken place largely in the younger ages of life where the preventable diseases have been brought so largely under control.

The greatest single improvement during the year was a drop in the tuberculosis death rate to a new low point. The reduction for the year amounted to 8.6 per cent, the largest single decrease in a decade. The tuberculosis death rate is now 70 per 100,000. The 1932 decline in the death rate from this cause effected a saving of 1,100 lives in that year alone.

The mortality rate for the four principal communicable diseases of childhood has dropped 50 per cent in the past 4 years, and almost 70 per cent in 10 years, the rate for each of these diseases in 1932, with the exception of scarlet fever, being the lowest ever recorded. Even diphtheria has become a minor cause of death and will evidently soon be so unimportant that no place need be assigned to it in the statistical tables.

Typhoid fever which has been practically a negligible item for several years was reduced in 1932 to the new low point of 1.7 per 100,000. The mortality rate for pneumonia dropped to a new minimum of 56.8 per 100,000, and the influenza rate was only 17.6. Both of these rates were adversely affected by the prevalence of influenza in

December, but in spite of that fact marked a decided improvement, the influenza rate being well below the average for the last 10 years.

Although the downward trend of deaths from conditions arising out of pregnancy and childbirth has been practically continuous for the past 12 years, the rate is regarded as rather misleading since the drop is due, in part, to the declining birth rate. The ratio of puerperal deaths per 1,000 live births is a much more accurate index of maternal mortality. No data are available for the industrial insurance holders, but in the general population where birth data are available, the death rate per 1,000 live births has shown little variation from year to year, and is far higher than it should be. It is twice as high as in Denmark and 50 per cent above that in England and Wales.

The death rate from alcoholism has declined in the past 3 years from 3.5 per 100,000 in 1929 to 2.4 in 1932, the lowest point reached in this insured group for 10 years. The rate for cirrhosis of the liver, which is often of alcoholic origin, however, has increased in recent years.

In contrast to these lowered death rates, new maximum rates were shown for cancer, diabetes, and diseases of the heart, following the definite upward trend in these diseases which has been manifest for each over a long period. The most disturbing development of 1932 was the decided increase in the cancer mortality, amounting to a 7.8 per cent increase over the 1931 figures and 15.8 per cent in two years. A slow but persistent rise in the cancer death rate has been taking place all over the world for several decades, but it is said to be difficult to assign a reason for this sharp increase during the past two years among insured wage earners. The fragmentary data available do not show that the population at large has experienced a similar rise, although the increase in two years appears to have been greater than the average during the last decade. Among the group of industrial policyholders there has been a shift in the relative age distribution, so that a somewhat larger proportion of the group are in the higher age ranges where most of the deaths from cancer occur. But if this were the reason for the higher rate it would also affect the rates for the several "degenerative" diseases—heart disease, cerebral hemorrhage, and chronic nephritis—which have not, however, increased correspondingly. If the much lower cancer rate of 1911 had prevailed in 1932, 4,026 fewer policyholders would have died of this disease than the 15,394 who actually died during the year, or even if the 1931 rate had prevailed there would have been 1,117 fewer deaths. Among the colored policyholders the rate, which is somewhat higher than among the white, has increased even more sharply. A very marked increase in the diabetes death rate occurred in the past two years, amounting to about 25 per cent. While the rate for this disease has been increasing for the past eight years, the average duration of life of diabetics after the onset of the disease has increased materially since the discovery of insulin. The death rate has shifted to the older age ranges and among persons under 45 years the rate has declined.

Heart disease, since 1922 the leading cause of death, reached a new high point of 157.4 per 100,000 in 1932. This was 4.9 per cent higher than the previous maximum reached in 1931. The rate for this disease is declining at the younger ages, and it is expected that it will continue to decrease as cases of the infectious diseases of childhood.

focal infections, etc., which cause impairments of the heart among children and young persons, are brought under control.

The rise in the suicide death rate in 1932 was less than 6 per cent, which was a smaller increase than had occurred for several years. It is said that the facts show that the rise in the death rate from this cause since 1929 can not be ascribed entirely to the unfavorable economic conditions, as the upward trend has been evident since 1925 and covers, therefore, some of the most prosperous years in the history of the country. Also, the suicide situation as shown by the life insurance records has improved materially in two decades, the suicide rate among Metropolitan industrial policyholders being 10.8 per 100,000 in 1932 as compared with 13.3 in 1911.

Employment of Women in Vitreous Enameling

A RECENT study¹ of the hazards to which women are exposed in vitreous enameling in the stove industry has been made by the United States Women's Bureau. The study covered the enamel departments of 45 factories employing a total of 1,330 women.

The facts in the study were brought out through an inspection of the work places; the determination of the lead content in the enamel used, whenever this was possible; and interviews with a large number of women in their homes to determine, if possible, the effect the work had had upon their health. Altogether 686 women were interviewed. The women employed in enamel work fell into two groups—those applying an enamel spray, not all of which contained lead, and those employed as brushers who remove the excess of enamel after it has dried. The sprayers are subjected to the greatest lead exposure, as much of their work is done on cast iron which is covered with lead enamel, while the brushers are chiefly employed on sheet iron on which a leadless enamel is used. Comparisons were made, therefore, between the sprayers and brushers, as it seemed fair to assume that if there was any marked difference between these two groups of women employed in the same establishments it would be fair to assume that the lead was largely responsible. It must be remembered, however, that the comparison is not between a perfectly normal group and a group exposed to lead but between two groups of varying degrees of exposure. In spite of this fact, it was considered that the figures were decidedly significant. Thus, the report states:

Over 50 per cent more sprayers than brushers complained of a metallic or sweetish taste, indigestion, constipation, and menstrual disturbance. Other findings are that illness among the sprayers with symptoms suggestive of lead poisoning was more prevalent than any other form, although in general industrial experience the common cold always leads in frequency. The sprayers had a higher rate of absences due to ill health than had the brushers, 18.5 per cent of the sprayers who left work doing so because of illness, while only 8.8 per cent of the brushers gave illness as the cause. A rather ominous finding is this: That among the sprayers, those between 16 and 18 years yielded the highest percentage of illness suggestive of lead poisoning.

It has been shown by studies in this country and abroad that there is greater susceptibility to lead poisoning among young persons. In

¹ United States Women's Bureau. The employment of women in vitreous enameling, by Ethel L. Best. Washington, 1932.

the industry studied it was found that more than one-fourth of the women covered were under 20 years of age and more than half were between 20 and 30 years, also an unusually large proportion of the women were married which is regarded as a serious feature of the report as it has been known for more than a century that lead is a race poison.

Of a total of 670 women reporting on whether or not they had symptoms indicative of lead poisoning, 198 reported that they had one or more symptoms. About one-third of these women reported a single symptom, but more than one-fourth reported five or more. Among those reporting three or more symptoms the three occurring most frequently were loss of weight, indigestion, and metallic or sweet taste. There was a considerable difference in the relative frequency of certain symptoms among the sprayers and among the brushers, a very much larger proportion of sprayers having constipation, indigestion, nervousness, menstrual disturbance, metallic or sweet taste, and loss of appetite. Among the brushers the two symptoms which were most common were loss of weight and headache.

The importance of individual susceptibility was shown by the fact that of 196 women having symptoms who reported length of service 99 or slightly over one-half had been employed for less than one year, while only 9 had been employed five years or over. This comparatively small proportion reporting symptoms in the longer-service group is believed to be due to the elimination of the workers more susceptible to lead poisoning, so that those remaining are a picked group as compared with workers in the shorter-service periods.

Working conditions in the plants visited were found to vary from poor to excellent, but in no establishment was the medical service adequate and in only a small minority was there adequate provision for cleanliness. A study was made of the turnover record of the different plants for the year immediately preceding the visit to the plant, and so far as possible these former employees were interviewed to determine their reason for leaving work. It was found that 13.1 per cent of the women who left did so because of poor working conditions—heat, dust, and fear of danger from the dust—as compared with 3.7 per cent of cotton-mill workers who were found in a previous study by the Women's Bureau to have left because of poor working conditions.

Dr. Alice Hamilton in the preface to the report states:

We may as well face the fact that the enameling of stoves, an industry of rapid growth and with probably a great future expansion, is one which subjects a large number of women to the danger of lead poisoning and that these women are not under present conditions efficiently protected against the danger. Even under the best conditions and supervision there will always be some danger; and therefore the most practical suggestion which can be made to the men at the head of the industry is that they substitute leadless enamel for lead enamel, a change which is greatly facilitated by the change from cast iron to sheet metal, which has already been made by a number of manufacturers.

LABOR LAWS AND COURT DECISIONS

Employee Concurrently Negligent Not Precluded from Recovery Under Employer's Liability Act

ON DECEMBER 8, 1927, Joseph Rocco, while riding a track inspector's tricycle in the course of his employment, was killed in a collision with an electrically operated passenger train on the single-track branch of the Lehigh Valley Railroad between Ithaca and Auburn, N. Y. The collision occurred on a blind curve where Rocco could not see the approaching train nor could the motorman see him. However, there was a rule, with which Rocco was familiar, requiring track inspectors to ascertain the whereabouts of the trains before proceeding along the main tracks.

Suit was filed in the New York Supreme Court under the Federal employer's liability act by Mary Rocco, executrix, to recover damages from the railroad company. She alleged that the company was guilty of negligence in that it failed to operate the train at a proper speed, failed to warn Rocco of the train's approach, and failed to provide for him a safe place to work. The defense by the company in the suit was that Rocco assumed the risk and that he was guilty of such negligence as would bar a recovery. Rocco was scheduled each day to precede the morning northbound train, inspecting the track and to return in advance of the afternoon train, going south. On the day of the accident washouts had occurred due to winds and storm and the noon southbound train was over three hours late. Rocco had started on the inspection tour without first ascertaining the whereabouts of the train. The company contended that this disobedience of the rule by Rocco was the primary cause of his death and any negligence of the motorman was immaterial.

The New York Supreme Court rendered a verdict of \$12,096, and this was reduced by the jury 40 per cent on account of Rocco's contributory negligence. The company appealed to the Appellate Division of the New York Supreme Court and the judgment was affirmed. However, the New York Court of Appeals ordered that the complaint be dismissed on the ground that Rocco's negligence was the primary cause of the accident and the executrix could not, therefore, maintain the action. Thereupon, the case was taken to the United States Supreme Court for a review of the ruling of the New York Court of Appeals. The Supreme Court held the cases relied upon by the court of appeals were not controlling in the present case, for in none of the cases "was there any negligence on the part of employees operating the train moving in the opposite direction." Continuing, Mr. Justice Roberts said:

There is no suggestion that the rule upon which the respondent relies forbade Rocco to start on his inspection trip if he ascertained that the approaching train

was within 7 or 8 miles of Ithaca. It was his duty to make his afternoon trip. * * * If he had made inquiry, whether he should await the arrival of the train, or attempt to meet it at some point a short distance from that city, was a matter for his decision. If the rule had forbidden him to leave under circumstances such as inquiry by him would have disclosed, this case would be parallel with those cited. His disregard of the rule was none the less an element in the case.

The jury adjudged him guilty of contributory negligence, and molded its verdict accordingly. But it was open to the jury, as above shown, to find that the motorman of the train was also guilty of negligence which contributed to the collision. Rocco's infraction of the rule was a concurrent cause, but may not in any proper sense be held the primary cause of the accident. His negligence did not preclude a finding by the jury that his death was in part due to the negligence of the respondent's servants. The act imposes liability upon the carrier for injury or death resulting "in whole or in part" from the negligence of any of its officers, agents or employees.

The decision of the appeals court was therefore reversed. (*Rocco v. Lehigh Valley R. Co.*, 53 S. Ct. 343.)

Court Refuses to Render Opinion Regarding Barbers Not Complying with Statute

THE Supreme Court of Mississippi recently refused to render an opinion as to whether barbers can safely continue the practice of barbering without complying with the barbers' statute. (*Baldwyn et al. v. Board of Barber Examiners*, 145 So. 240.)

The Mississippi barbering statute (ch. 118, Laws of 1932) creates a State board of barber examiners, whose duty it is to determine the qualifications of all persons desiring to practice barbering. The first part of the law authorizes the board "to make reasonable rules and regulations for the administration of the provisions of the act"; to "adopt the regulations of the State board of health governing sanitation of barber shops and barber schools; to enter upon and inspect any barber shop or barber school at any time during business hours and * * * report to the State board of health any instances of violations of the sanitary regulations for action by the State board of health." The second part of the act provides that the board may examine any person applying for a license and "determine his fitness to practice barbering," and if he is found qualified, issue him a certificate to that effect. The statute prohibits anyone from practicing without such a certificate. Applicants are required to pay \$5 before they are examined by the board, and if their qualifications are satisfactory, an additional dollar is paid when the certificate is issued.

P. J. Baldwyn and others engaging in the practice of barbering filed suit in the chancery court, Hinds County, Miss., against the board of barber examiners, to secure an injunction restraining the board from enforcing the provisions of the barbers' statute referred to above. They allege that the statute is unconstitutional and that they will suffer irreparable injury if the board is allowed to proceed in the enforcement of the statute. They further state that the board is demanding that they pay certain fees at once and that they submit themselves to another physical examination; that they are "in grave danger of not only being denied the right to pursue their lawful trade but could be and will be robbed of their personal liberties," if the desired injunction is not issued by the court.

The chancery court dismissed the case and upon appeal to the Supreme Court of Mississippi the decision was affirmed. The court said that "the bill fails entirely to allege what proceedings, if any, the appellees have begun or have threatened to begin in order to coerce the appellants into complying with the provisions of the statute." Even though all of the allegations of fact in the bill were true, the court was not sure the appellants would be interfered with if continuing to practice barbering. "If criminal proceedings have been commenced, or threatened to be commenced against them by the appellees," said the court, "that would bring the case within the rule authorizing the issuance of an injunction restraining them, that fact should be specifically averred. The bill simply presents a case wherein an opinion is requested advising the appellants whether they can safely continue to 'practice barbering' without complying with the provisions of the statute. Such opinions the courts should not give." The court, therefore, declined to express its opinion as to the validity of the statute or the rights of the parties.

Hour and Wage Legislation in New South Wales

IN THE autumn of 1932 the legislature of New South Wales passed an amendment to the State industrial arbitration act, effective December 6, 1932, which empowered the industrial commission to alter the existing standard working hours, regulated the wage changes which might be permitted as a result of such alteration, and authorized the appointment of a conciliation commissioner and of an apprenticeship commissioner. The terms of the act are given in the New South Wales Industrial Gazette, December, 1932.

Hours

THE new legislation provides that the commission shall, "as soon as conveniently possible after the commencement of this act, and may from time to time thereafter, determine after a public inquiry and declare the standard hours for all industries to which the principal act applies." It is given power, however, to exclude from the operation of such a declaration industries in regard to which it feels that there are special circumstances which should be taken into consideration, and in dealing with these it is given full discretion.

The commission may in any industry or in respect of any employees or class of employees in any industry if in the public interest it shall deem it desirable so to do—

(1) Declare a greater number of ordinary working hours than the standard hours about to be declared; or

(2) Declare a greater number of ordinary working hours than the standard hours already declared; and in any event may increase the number of days on which the hours may be worked.

The commission may in respect of any employees or class of employees who are engaged upon work which in its opinion is prejudicial to health—

(1) Declare a lesser number of ordinary working hours than the standard hours about to be declared; or

(2) Declare a lesser number of ordinary working hours than the standard hours already declared.

The commission may also declare a lesser number of working hours for any industry or group of employees which, prior to January 4, 1926 (the date at which the 44-hour week legislation went into effect), had a lesser number of hours than the standard about to be declared.

Wages

IN THE main the amendment was intended to make sure that weekly earnings should not be changed in accordance with any alterations in hours made under its terms.

Wages and salaries fixed upon a weekly or longer basis by any award or industrial agreement in force at the date of any declaration made under subsection one of this section, or any award made or agreement entered into after such declaration, shall not be increased or reduced by reason of any increase or reduction of the ordinary working hours made in accordance with such declaration.

Where the ordinary working hours in any industry are increased or reduced by reason of any declaration made under subsection one of this section, the rate of wages specified in any award or industrial agreement as payable upon a daily or hourly basis shall, without any further award or variation or amendment of the award or agreement, be deemed to have been reduced or increased from the date of any such declaration to such rate as will provide each employee working full time with the same amount of wages as he would have received for working full time under the provisions of the award or agreement prior to the declaration.

In the same manner piecework rates are to be reduced or increased, if the hours are changed, in such manner "as will provide each employee working full time with the same remuneration as he would have received working full time at the same speed under the provisions of the award or agreement prior to the declaration."

Nevertheless, it is provided that when a declaration has once been made and the wage rates fixed in accordance with the above specifications, if the commission shall deem it well thereafter to reduce the hours it may also provide for a corresponding reduction of wage rates.

Adjustment of Basic Wage

THE act provides for the periodic revision of the basic wage, thus removing one of the standard complaints brought against the wage-fixing machinery. Under the legislation superseded by this amendment there had been no change in the living wage, as established by the industrial commission from December, 1929, to August, 1932. It was felt that in a period of rapidly changing economic conditions there would be a greater probability of securing corresponding alterations in the wage if the law called for a review at stated periods.

The commission shall within 28 days from the end of the months of March and September adjust the living wages so declared at such amount as will, in the opinion of the commission, accord with the increased or decreased cost of maintaining the determined standard, and shall within the said period of 28 days cause to be published in the Gazette the amounts of the living wage so adjusted.

Upon a declaration of the living wages or upon any adjustment thereof during the currency of any award or industrial agreement the terms of such award or industrial agreement affecting rates of pay shall be deemed to be varied to accord with such declaration as from the date of the declaration and with such adjustment as from the commencement of the first pay period in the month immediately following the month in which the adjustment is published in the Gazette.

WORKMEN'S COMPENSATION

Findings of Compensation Commission Conclusive if Supported by the Evidence

THE findings of fact in respect to a compensation claim and the determination of all questions by the United States Employees' Compensation Commission under the District of Columbia compensation act, are conclusive if supported by the evidence and may not be reviewed by the courts on appeal, according to a recent decision of the United States Supreme Court. (*Voehl v. Indemnity Insurance Co. of North America*, 53 S. Ct. 380.)

The facts in the case show that Karl F. Voehl was employed by the National Electric Supply Co. doing business in the District of Columbia. The company carried workmen's compensation insurance with the Indemnity Insurance Co. of North America. On Sunday, April 6, 1930, Voehl was injured, while driving his own automobile from his home to the company's warehouse, when the car overturned due to a defective steering gear. He was awarded compensation and the insurance carrier brought suit to enjoin the payment of this award. The Supreme Court of the District of Columbia dismissed the suit and the insurance carrier appealed the case to the District of Columbia Court of Appeals, contending that there was no causal connection between the employment and the injury. The evidence showed that at the time of the injury he was going to the warehouse to secure a load of ashes, which he planned to dump in a mud hole in the road near his residence. He claimed, however, that it was his intention to clean up some trash while he was there. The insurance carrier contended that this was not a part of his duties as he was employed as "head of the products division" and his duties in that capacity did not include cleaning out the warehouse. He was required to take care of the service calls outside of regular hours, and was often required to go to the warehouse on Sunday, receiving overtime pay for such work. However, it was contended that he was authorized to work only on service calls and not in cleaning out the warehouse, and therefore the injury received did not arise out of nor in the course of his employment.

The court of appeals reviewed the facts of the case and followed the decision in the case of *Interstate Commerce Commission v. Louisville & Nashville R. R. Co.* (227 U. S. 88), which held that a finding without evidence is beyond the power of the commission and an order based thereon is contrary to law and should be set aside. Reviewing the facts the court said:

The evidence clearly established, we think, that the purpose of the trip on the Sunday morning of the accident was to procure a load of ashes for Voehl's personal use, and that if in fact he intended to remove some trash, this was merely incidental to the general purpose for which the trip was made. Voehl at the time and place of the injury was not performing any duty in the course of his employment. The cause of the accident was a defect in his own automobile over which the employer had no control and in which he was driving at the time without any order from his employer. [60 Washington Law Reporter, 451.]

The suit enjoining the payment of the award was therefore allowed by the court of appeals and the decree of the lower court was reversed.

The employee appealed the case to the United States Supreme Court for a review of the decision. The Supreme Court reviewed the District of Columbia compensation act and concluded that the deputy compensation commissioner had acted within his authority in determining the particular questions as to whether the injury arose out of and in course of the employment, and held that his decision would be final if supported by the evidence.

The precise issue, therefore, in the case turned on "the general nature and scope of Voehl's duties, the particular instructions he had received, and the practice which obtained as to work in extra hours or on Sundays, and the purpose of the journey in which he was injured."

Mr. Chief Justice Hughes rendered the opinion of the court upholding the decision of the deputy compensation commissioner. He said in part as follows:

The deputy commissioner found that petitioner was injured while on his way to the employer's warehouse for the purpose of clearing it of debris in accordance with his duties, and that when so engaged on Sunday the terms of his employment covered the period of service from the time he left his home until his return, his compensation for this service being at an agreed rate per hour for the entire time, with an allowance for his transportation. We think that these findings were supported by the proof. From the testimony of the employer's manager, who had supervision of petitioner's work, it appeared that petitioner, being employed in the "refrigeration division" of the supply company, had charge of the maintenance and operation of the company's warehouse and of the maintenance of service on refrigerators in customers' homes. He was the "head of the products division." With other matters, it was his duty to see that the buildings and stock were kept in proper order, and that there was compliance with the fire rules. He had strict instructions with respect to the disposition of debris and its prompt removal.

It was pointed out that Voehl's hours of service were usually between the hours of 7.30 a. m. and 5.30 p. m., but that he was on duty all the time, subject to call, and that he always handled the calls of customers which were made outside of office hours. He was always paid for the overtime work, and the time spent in going to and returning from the work was always included in computing the amount paid for overtime. The court also commented on the fact that the manager had discussed the condition of the warehouse with Voehl and had called his attention to the necessity of keeping it better cleaned. In concluding the opinion the court said that the general rule was that "injuries sustained by employees when going to or returning from their regular place of work are not deemed to arise out of and in the course of their employment." (Cases cited.) However, the court said:

Ordinarily the hazards they encounter in such journeys are not incident to the employer's business. But this general rule is subject to exceptions which depend upon the nature and circumstances of the particular employment. "No exact formula can be laid down which will automatically solve every case." * * * Service in extra hours or on special errands has an element of distinction which the employer may recognize by agreeing that such service shall commence when the employee leaves his home on the duty assigned to him and shall continue until his return. And agreement to that effect may be either express or be shown by the course of business. In such case the hazards of the journey may properly be regarded as hazards of the service, and hence within the purview of the compensation act.

The decision of the District of Columbia Court of Appeals was, therefore, reversed and the court affirmed the decision of the lower court and the deputy compensation commissioner allowing compensation.

Occupational Disease Producing No Immediate Disability Not Compensable

AN EMPLOYEE contracting a skin disease while in the employment of a rug corporation, but suffering no disability until sometime after he left the company's employment, is not entitled to receive compensation under the Wisconsin workmen's compensation law. (*Kimlark Rug Corporation et al. v. Stansfield et al.* 246 N. W. 424).

The facts in the case show that Winfred Stansfield entered the employment of the Kimlark Rug Corporation in November, 1924, and continued in such employment, with the exception of a few short intervals when engaged in carpentering, until March, 1929.

In the course of and arising out of his employment with the rug corporation Stansfield contracted a skin disease, which became noticeable about January, 1928, but did not cause any disability to the employee. He continued to perform his duties and lost no time from work on account of his condition. He did, however, receive treatments from the company's doctor.

In 1929 Stansfield voluntarily discontinued his employment with the Kimlark Rug Corporation and entered the employment of the George Banta Publishing Co. where he worked until March, 1930. At that time, his condition having grown worse due to the skin disease contracted during his former employment, he resigned from the Banta Publishing Co., and at his physician's advice engaged in farming.

He filed a petition with the Wisconsin Industrial Commission for an award of compensation, and on September 9, 1931, the commission rendered an award in his favor in the sum of \$377.56. This award was affirmed by the Dane County Circuit Court and the Kimlark Rug Corporation appealed the case to the Supreme Court of Wisconsin, where the decision of the circuit court and the industrial commission was reversed. The court pointed to the fact that Stansfield suffered no wage loss or disability while in the employment of the rug corporation; and also commented on the fact that for a year after the employment relation had been discontinued he worked for another employer. The court said:

There is no question but that the dermatitis, from which respondent was suffering at the time of the hearing before the industrial commission, resulted from exposure while in the employ of appellant. But, because no loss of time or wages occurred while the relation of employer and employee existed between appellant and Stansfield, the workmen's compensation act does not provide for the exaction of compensation from his then employer.

The court cited many cases showing the limitation of the Wisconsin workmen's compensation statute with respect to occupational disease cases and stated that the general rule is "that the employee suffering from an occupational disease is entitled to be compensated if at the time of disability the relation of employer and employee existed."

The court concluded the opinion by saying:

It was pointed out in *Zurich Gen. Acc. & L. I. Co. v. Ind. Comm.*, 203 Wis. 135, 233 N. W. 772, that under the law no provision is made for such a case as is now before us where the workman has been subjected to exposure, but the disability does not occur while the relation of employer and employee exists between the workman and the concern in whose employ the exposure occurred. The statute as at present drawn does not aim at exposure, but at disability. An accident which produces no disability is not compensable. Stansfield, while undoubtedly uncomfortable as a result of the infection, was not incapacitated, and did not suffer any loss of earnings at any time while an employee of appellant. No disability occurring during that time, the judgment of the circuit court must be reversed, and the award of the commission vacated.

Recent Compensation Reports

Iowa

THE tenth biennial report of the Workmen's Compensation Service of Iowa, covering the period ending June 30, 1932, contains recommendations by the industrial commissioner, statistics of administrative activities, and decisions of the department in disputed cases.

A partial summary of departmental activities for each of the two fiscal years follows:

TABLE 1.—WORKMEN'S COMPENSATION EXPERIENCE IN IOWA, 1930-31 AND 1931-32

Item	July 1, 1930, to June 30, 1931	July 1, 1931, to June 30, 1932
Accidents reported.....	10, 038	8, 355
Fatal injuries.....	83	58
Settlements reported.....	4, 704	4, 076
Compensation paid in reported settlements.....	\$755, 810	\$768, 345
Medical and hospital services reported paid.....	\$145, 199	\$111, 148
Requests for arbitration.....	337	288
Expense of administration.....	\$18, 551	\$18, 643

The reduction in fatalities, 144 in the biennium covered as against 295 in the previous two years, is declared the brightest spot in administration. A decrease in accident reports is shown, but also an increase in compensation payments. Department expenditures show slight increase in traveling expense, due to more litigation.

Recommendations are submitted for amendments to the compensation law, as follows: Coverage for volunteer firemen, optional agricultural coverage, consideration for 7-day workers, protection for employees of subcontractors, and clarification of medical, surgical, and hospital provisions.

Attention is called to the favorable experience of several of the large plants operating in the State demonstrating the value of safety promotion and cooperation of the employee, the employer, and the insurance company. One plant operated the entire year of 1931 without a lost-time accident, and others have effected material reductions.

New York

SPECIAL Bulletin No. 176 of the New York State Department of Labor contains an analysis of the causes of accidents for which closing awards of compensation were made in the year ended June 30, 1930.

A change from fiscal to calendar year basis is contemplated for future bulletins. Detailed tables are presented with text analysis, showing the number of accidents, the extent of disabilities, the nature of the injuries, and the compensation costs, by causes and by industries.

Table 2 shows the number of cases closed during the fiscal year ending June 30, 1930, and the amount of compensation paid, by cause of accident, and also classified by industry.

TABLE 2.—NUMBER AND COST OF COMPENSATED ACCIDENTS IN NEW YORK, BY CAUSE AND BY INDUSTRY, FOR THE FISCAL YEAR ENDING JUNE 30, 1930

Cause of accidents	Total number of cases	Total weeks of disability ¹	Compensation ²	
			Total amount	Average cost per case
Handling objects and tools.....	39, 103	483, 930	\$7, 433, 458	\$190
Falls of workers.....	21, 313	714, 894	9, 158, 560	430
Mechanical apparatus (machinery, conveyors, etc.).....	17, 140	555, 516	7, 040, 833	411
Vehicles.....	9, 686	492, 871	5, 001, 265	516
Falling objects.....	6, 824	218, 291	2, 477, 660	363
Dangerous and harmful substances.....	6, 082	222, 095	2, 162, 758	359
Stepping on and striking objects.....	5, 187	42, 608	640, 409	123
Other or indefinite.....	4, 563	102, 682	1, 328, 760	291
Total, all causes.....	109, 848	2, 832, 887	35, 243, 703	321

¹ The standard weighting of 1,000 weeks and estimated present value are included for each death and permanent total disability case.

² Medical costs are not included.

According to Special Bulletin No. 178 of the New York Department of Labor, which presents an analysis of the cost of compensation for 1930 and 1931, the department made closing awards of compensation during the calendar year 1930 amounting to over \$36,000,000 and \$33,000,000 for the calendar year 1931. The bulletin covers all industrial accident cases for which final awards of compensation were made during the two years, but differs from former publications on the same subject in covering calendar years instead of fiscal years.

The number of cases closed during the year 1930 was 107,312 and 98,424 for 1931. It is explained that many of these accidents occurred in earlier years, so the figures do not show how much the decrease in employment has reduced the number of compensable accidents nor state how the reduction in employment has affected the number of industrial accidents.

Table 3 shows the number of cases closed, the number of weeks' compensation awarded in permanent partial and temporary disability cases, and the amount of compensation awarded.

TABLE 3.—NUMBER OF COMPENSABLE CASES CLOSED IN NEW YORK AND COMPENSATION AWARDED DURING CALENDAR YEARS 1930 AND 1931, BY EXTENT OF DISABILITY

Extent of disability	Number of cases		Number of weeks compensation awarded		Amount of compensation	
	1930	1931	1930	1931	1930	1931
Death.....	1,328	1,177	-----	-----	\$8,375,995	\$7,232,761
Permanent total.....	50	68	-----	-----	775,137	970,804

Temporary.....	82,987	77,374	532,588	561,945	9,332,491	9,983,667
Total.....	107,312	98,424	1,518,377	1,419,093	36,578,281	33,702,525

In Table 4 is presented a comparison for the current year and the previous year of the number of compensable cases closed, distributed according to the industry in which they occur. A decided reduction is shown for the manufacturing industry—18 per cent—while the service industry presents an increase of 11 per cent.

TABLE 4.—NUMBER OF COMPENSABLE CASES CLOSED IN NEW YORK DURING CALENDAR YEARS 1930 AND 1931, BY INDUSTRY

Pennsylvania

ACCORDING to compensation and accident statistics issued by the Bureau of Statistics of the Department of Labor and Industry of Pennsylvania, a total of 1,070 fatal and 84,036 nonfatal injuries was reported to the bureau of workmen's compensation during 1932, as against 1,482 fatal and 109,976 nonfatal injuries reported during 1931, or decreases of 27.8 per cent and 23.6 per cent, respectively.

This extraordinary decrease is attributed principally to the widespread unemployment resulting from the business depression, but it is pointed out that labor-saving machinery and accident prevention also proved important factors in reducing the number of workers killed or injured to the lowest figure recorded since 1916. Comparative decreases, from 1931 to 1932, in employment and injuries for important industrial groups for which comparative data are available, are given as follows:

Construction and contracting—employment 38.1 per cent, fatalities 55.2 per cent, nonfatal injuries 38.2 per cent; anthracite coal mining—employment 22.5 per cent, fatalities 36 per cent, nonfatal injuries 30.4 per cent; manufacturing—employment 16.5 per cent, fatalities 13.3

per cent, nonfatal injuries 26.0 per cent; quarrying—employment 13.4 per cent, nonfatal injuries 31.9 per cent; bituminous coal mining—employment 11.7 per cent, fatalities 22.2 per cent, nonfatal injuries 28.4 per cent; wholesale trade—employment 8.6 per cent, fatalities 41.2 per cent, nonfatal injuries 19.0 per cent; retail trade—employment 7.0 per cent, fatalities 32.0 per cent, nonfatal injuries 8.6 per cent.

Table 5 shows the number of fatal and nonfatal injuries reported during 1932, distributed according to industrial group classification, with per cent of change from 1931.¹ An increase of 30.3 per cent for the State and municipal group is due mainly to the extensive road building program instituted during 1932.

TABLE 5.—NUMBER OF FATAL AND NONFATAL INJURIES REPORTED IN PENNSYLVANIA, 1932 AS COMPARED WITH 1931, BY INDUSTRIAL GROUP

Industrial group	Number of accidents reported		Per cent of change, 1932 compared with 1931	
	Fatal	Nonfatal	Fatal	Nonfatal
Construction and contracting.....	73	8,099	-55.2	-38.2
Manufacturing.....	202	23,245	-13.3	-26.0
Coal mining:				
Anthracite.....	280	15,569	-36.0	-30.4
Bituminous.....	186	10,896	-22.2	-28.4
Quarrying and mining other than coal mining.....	26	868	0.0	-31.9
Transportation and public utilities.....	101	3,518	-29.9	-25.7
Trade:				
Retail.....	32	6,550	-32.0	-8.6
Wholesale.....	10	989	-41.2	-19.0
State and municipal employment.....	84	7,177	-19.2	+30.3
Other industries.....	76	7,125	+5.5	-10.7
Total.....	1,070	84,036	-27.8	-23.6

A reduction is also shown in both compensation liability and the number of agreements approved. The total amount of compensation awarded for the year was \$11,112,178, as compared with \$14,176,121 for 1931, a decrease of 21.6 per cent. Compensation awards were made in 1,095 fatal cases, amounting to \$3,606,745, an average of \$3,294 per case; in 2,429 permanent disability cases, amounting to \$3,036,548, an average of \$1,250 per case; and in 51,933 temporary disability cases, amounting to \$4,468,885, an average of \$86 per case. The length of disability for all temporary disability cases compensated during 1932 averaged 44.5 days, as compared with an average of 41.5 days for 1931, an increase of 7.2 per cent over the previous year.

United States and District of Columbia

THE sixteenth annual report of the United States Employees' Compensation Commission, for the fiscal year ending June 30, 1932, covers the operations of the three workmen's compensation laws administered by the commission: United States employees' compensation act, which became effective September 7, 1916; longshoremen and harbor workers' compensation act, which became effective July 1, 1927; and District of Columbia workmen's compensation act, which became effective July 1, 1928.

The commission explains that it was necessary to omit in this report practically all of the customary tables showing in detail the operations under each of the three laws, and to otherwise shorten the report, in order to keep within the limited appropriation for the current fiscal year.

¹ For data covering 1931, see Monthly Labor Review for April, 1932.

United States Employees

UNDER the United States employees' compensation act, reports were received by the commission during the calendar year 1931 of 28,438 injuries, an increase of 2,369 over the number reported during 1930, the highest previous record. More than one-half of this increase is accounted for by 1,298 injuries in 1931 in the Forest Service of the Department of Agriculture over the number for the previous year, or 2,954 injuries in 1931 as against 1,656 in 1930. The additional injuries are attributed to a considerable increase in employment in connection with the suppression of forest fires, an extremely hazardous class of work which is usually of an emergency character and consequently largely performed by casual and untrained labor.

The number of claims for death benefits during 1931 was 168, the lowest in the history of the commission, as compared with 206 death claims in 1930 and 263 in 1929. The total number of claims received in 1931, however, was 9,408, the highest record since 1920, as against 9,283 in 1930, and 9,337 in 1931. There was consequently an increase from 1930 to 1931 in the total number of claims received of only 1.35 per cent, while the total number of injuries reported shows an increase of 9.09 per cent.

The number of cases closed during 1931 consisted of 292 fatal cases, of which 153 were approved while 57 were disapproved, and 27,052 disability cases, a total of 27,344. The disability cases consisted of 225 cases involving permanent partial disability, 15,567 cases of temporary total disability causing loss of time, 9,571 cases in which the injury did not cause a loss in working time, and 1,689 cases disapproved by the commission.

The usual summary table, which is not included in the report, but which was furnished by the commission, is shown as Table 6. This presents a summary of awards and valuations, nonfatal cases closed, and fatal cases acted upon during the calendar year 1931.²

TABLE 6.—AWARDS AND VALUATIONS UNDER FEDERAL EMPLOYEES' COMPENSATION ACT, BY EXTENT OF DISABILITY, 1931

Extent of disability	Number of cases	Duration (days)	Average duration (days)	Amount of award	Average award
Temporary total disability:					
Compensated.....	7,255	295,514	40.7	\$734,438	\$101.25
Noncompensated.....	8,312	75,066	9.0		
Total.....	15,567	370,580	23.8	734,438	47.18
Permanent partial disabilities:					
Dismemberments.....	* 136	15,315	112.6	37,076	272.62
Loss of function.....	† 89	48,424	544.1	140,319	1,576.61
Total.....	225	63,739	283.3	177,395	788.42
Deaths.....	210			* 2,021,683	9,627.06
Burials (181).....				36,087	199.38
Award before death (27).....				21,083	780.85
Medical cost (fiscal year 1931) †.....				435,903	
Grand total.....	16,002	434,319	* 27.5	3,426,580	57.74

* Includes 19 noncompensated cases with a duration of 628 days.

† Includes 21 noncompensated cases with a duration of 2,158 days.

* Estimated total cost.

† Includes medical care in permanent disability cases on compensation rolls.

* For 15,792 nonfatal cases.

²For similar data covering 1930, see Monthly Labor Review, March, 1932.

On December 31, 1931, there were 611 cases on the docket in which compensation was being paid for permanent total disability, and 1,194 cases of permanent partial disability in which compensation was being paid for reduction in earning capacity. Approximately 36 per cent of the total disability cases and 30 per cent of the permanent partial disability cases are being compensated for injuries of more than 10 years' duration. The United States employees' compensation act differs from other compensation laws in providing payment of compensation in permanent total disability cases during the entire term of disability and in permanent partial disability cases as long as the disability causes a loss in earning power.³ Total payments made up to December 31, 1931, in these cases amounted to \$3,678,307 for compensation and \$563,966 for medical care in the total cases, and \$3,395,574 for compensation and \$549,480 for medical care in the partial cases. The future cost is estimated to be approximately \$8,500,000 for the total cases, and nearly \$4,000,000, exclusive of medical expense, for the partial cases.

Attention is called to the lack of organized safety work for the prevention of accidents, as the records indicate that at least some of the 210 deaths considered during the year might have been prevented. It is pointed out that prevention or reduction of accidents is desirable, even as an economic proposition, because the total probable cost of compensation benefits on account of the 210 deaths is \$2,096,814. So far as known, the Navy Department is the only executive department with an organized safety division.

Injuries from automobiles, vehicles, and other transportation facilities, such as cars and engines, airplanes, trucks, and motor cycles, accounted for 73, or more than one-third, of the fatal cases. More than one-fifth of the deaths (45) were due to suffocation by drowning, of which 24 occurred following a fall from a watercraft and 14 following a fall from a gangplank or bridge. Conflagration and other accidental burns caused 21 deaths.

Longshoremen and Harbor Workers

UNDER the longshoremen and harbor workers' act, reports were received during the fiscal year ending June 30, 1932, of 131 fatal and 25,206 nonfatal injuries, a total of 25,337 cases, or approximately 12 per cent less than the number reported for the previous fiscal year (28,863), and the smallest number reported for any one of the five years of operation. Besides the new cases, a total of 909 former cases were reopened for consideration during the year.

The number of cases closed during the year consisted of 94 fatal and 26,713 nonfatal injuries. In 26 of the fatal cases there were no dependents, and 53 other cases did not come under the scope of the law. The nonfatal cases consisted of 9,731 cases in which compensation payments were completed, 12,751 cases involving no loss of time, 3,128 cases in which the duration of disability did not exceed 7 days, and 1,103 cases disapproved by the commission.

Longshoremen suffered 60 of the fatalities, with an estimated compensation liability of \$279,332, and repair men 34 of the fatalities,

³ Fourteen other acts in the United States also provide for compensation during the entire period of permanent total disability, while 36 limit payments, and 1 of the 14 acts provides for compensation during life in permanent partial disability cases of 60 per cent or more.

with an estimated compensation liability of \$145,561. Out of 12,073 closed nonfatal cases involving loss of time, 9,698 cases with compensation payments of \$1,773,677 were incurred by longshoremen, and 2,375 cases with compensation payments of \$546,073 were incurred by repair men.

The principal causes of nonfatal injuries to longshoremen were the same as in the previous year, with a slight variation in the percentage of injuries: Handling of material by hand, 31.3 per cent; falling objects, 23 per cent; moving objects, 17.8 per cent; and falls of persons, 13.4 per cent. Fifty per cent of the fatalities were caused by falls. The most frequent and serious cause of injuries to repair men was, as formerly, falls of persons, which accounted for 22.3 per cent. Handling material by hand caused 18.8 per cent, flying objects 12.1 per cent, and falling objects 9.5 per cent.

The material reduction in new injuries is attributed principally to the slump in industrial operations, but it is also pointed out that some allowance should be made for the results of accident prevention programs in the different ports. Substantial progress is reported in the developing of a voluntary safety code for stevedoring operations. A number of amendments suggested for the first draft of this code have been included in the second draft, issued by the American Steamship Owners' Association.

District of Columbia Private Employment

UNDER the District of Columbia workmen's compensation act, reports were received during the fiscal year ending June 30, 1932, of 56 fatal and 20,916 nonfatal injuries, a decrease of 21 per cent in fatal and an increase of 7 per cent in nonfatal injuries as compared with the previous year.

The number of cases closed during the year consisted of 32 fatal and 21,761 nonfatal injuries. In 7 of the fatal cases there were no dependents, and 18 others did not come under the scope of the law. The nonfatal cases included 3,808 cases in which compensation was paid without an award, 12,718 cases involving no loss of time, and 4,103 cases in which the duration of disability did not exceed 7 days.

Fatal injury cases approved and nonfatal cases involving loss of time approved during 1931-32 totaled 7,812 and consisted of 37 fatal cases, 166 permanent disability cases, 3,623 temporary disability cases of more than 7 days' duration, and 3,986 temporary disability cases of 7 days or less.

The distribution of the nonfatal cases was: Clerical, personal service, and financial establishments, 1,342; construction, 2,517; manufacturing, 845; trade, 2,259; and transportation, 812. The estimated total cost of the fatal cases was \$209,804, and the compensation paid for loss of time in the nonfatal cases was \$166,081 in permanent disability cases and \$227,529 in temporary disability cases. In addition \$5,951 was paid for serious facial or head disfigurement in 14 cases.

The principal cause of the 7,812 injuries was handling of objects, which accounted for 2,012 of the nonfatal injuries but no fatalities. Falls of persons was next in numerical importance, with 561 from stairs, ladders, scaffolds, and staging; 308 on the level or from stumbling over objects; and 152 while carrying a load; total 1,357 injuries, including 12 fatalities. Falling objects accounted for 5 fatal and 585 nonfatal injuries. Striking against objects caused 633 injuries, stepping on objects caused 611, and being struck by objects caused 311. Hand tools caused 496 injuries, and vehicles 429 injuries, of which the automobile was responsible for 9 fatal and 353 nonfatal injuries. Mechanical causes accounted for 378 injuries, all nonfatal.

WORKERS' EDUCATION AND TRAINING

Occupations of Students of Cleveland College for Adults

IN 1925 in Cleveland, Ohio, a separate degree-granting institution for adults was established and designated "Cleveland College in Affiliation with Western Reserve University and Case School of Applied Science." The following year this college was taken into full membership by the university but was allowed to continue its affiliation with the Case School. Writing of this educational undertaking in the January, 1933, issue of the *American Federationist*, Gary Myers of Western Reserve University reports that the college enrollment for the scholastic year 1929-30 was 7,182, nearly all of whom were wage earners, the great majority of them working during the day and studying at night.

Almost all occupations, social ranks, and degrees of wealth are represented among the students. Day laborers, cab drivers, clerks, and stenographers sit side by side with artists, poets, journalists, social workers, judges, politicians, business executives, Junior Leaguers, wives and children of millionaires—the one tie being a desire for some sort of knowledge and training and the ability to take the college courses. There are practically as many women as there are men availing themselves of the courses.

The 7,182 students included 2,334 clerks, salesmen, secretaries, and stenographers; 1,707 with miscellaneous occupations, among them bricklayers, bus and truck drivers, butchers, carpenters, chauffeurs, day laborers, dishwashers, doormen, dressmakers, elevator operators, icemen, laundresses, maids, messengers, milkmen, pages, painters, porters, seamstresses, switchmen, telephone operators, waiters and waitresses.

There were 1,300 professional men and women: Artists, architects, chemists, college professors, deans, dentists, doctors, lawyers, engineers, journalists, laboratory technicians, librarians, metallurgists, statisticians, ministers, school teachers, supervisors, principals; 289 presidents, vice-presidents, managers, and other senior business executives; 845 tellers, cashiers, auditors, treasurers, buyers, general agents, and other junior executives.

The ages of the students ranged from 16 to 76, the largest age group (including 3,710) being between 20 and 30. There were 1,460 between 30 and 40; 670 past 40; 180 past 50; and 21 over 60.

The students study what they please, attend class or not, and take examinations or not just as they wish. Notwithstanding this freedom, it is reported that 85 per cent continue their courses to the close and all but 4 per cent of those taking the final examinations succeed in passing them. The average grade is definitely higher than that of the first-class day colleges. There have been no cases of disorder and there are no rules and no discipline committee.

As the great majority of the students of Cleveland College are wage earners, the industrial depression was most acutely felt during the scholastic year 1931-32, when the enrollment was approximately 5,000. When business is rehabilitated the student body will undoubtedly expand rapidly, Professor Myers predicts, for the mass of people within reach of this institution appreciate the opportunities it offers for vocational advancement and the enrichment of leisure. Although the college enrollment-credit courses shrank very considerably last year, the actual number of people the college served was over 100 per cent greater than that of the preceding year owing to the extension service, which included 14,154 adults registered in (from 6 to 10 weeks) noncredit courses.

INDUSTRIAL DISPUTES

Strikes and Lockouts in the United States in February, 1933

DATA regarding industrial disputes in the United States for February, 1933, with comparable data for preceding months are presented below. Disputes involving fewer than six workers and lasting less than one day have been omitted.

Table 1 shows the number of disputes beginning in each year from 1927 to 1932, the number of workers involved and man-days lost for these years and for each of the months, January, 1931, to February, 1933, inclusive, as well as the number of disputes in effect at the end of each month and the number of workers involved. The number of man-days lost as given in the last column of the table, refers to the estimated number of working days lost by workers involved in disputes which were in progress during the month or year specified.

TABLE 1.—INDUSTRIAL DISPUTES BEGINNING IN AND IN EFFECT AT END OF EACH MONTH, JANUARY, 1931, TO FEBRUARY, 1933, AND TOTAL NUMBER OF DISPUTES, WORKERS, AND MAN-DAYS LOST IN THE YEARS 1927 TO 1932

Conciliation Work of the Department of Labor in February, 1933

By HUGH L. KERWIN, DIRECTOR OF CONCILIATION

THE Secretary of Labor, through the Conciliation Service, exercised his good offices in connection with 157 labor disputes during February, 1933. These disputes affected a known total of 23,312 employees. The table following shows the name and location of the establishment or industry in which the dispute occurred, the nature of the dispute (whether strike or lockout or controversy not having reached the strike or lockout stage), the craft or trade concerned, the cause of the dispute, its present status, the terms of settlement, the date of beginning and ending, and the number of workers directly and indirectly involved.

There were 17 cases involving the law on the prevailing rate of wages. In these cases it is not always possible to show the number involved, due to lack of information as to total number required before completion of construction.

On March 1, 1933, there were 24 strikes before the department for settlement, and in addition 65 controversies which had not reached the strike stage. The total number of disputes pending was 89.

Strikes and Lockouts in Canada, 1932

IN 1932 there were 116 strikes and lockouts in Canada—28 more than in the preceding year. The number of workers involved in these industrial disputes of 1932 was 23,390, an increase of 12,652 over 1931. The time loss in man working days was 255,000 in 1932 as compared with 204,238 in the previous 12-month period. Such increases are accounted for mainly by the greater number and importance of the coal-mine disputes, which in some cases were continued for relatively long periods. For the 6 years preceding 1932, however, the time loss in coal-mining controversies was comparatively slight. Most of the time loss in such disputes in 1932 was due to two controversies in Nova Scotia and four in Alberta. In other industries the 1932 time loss was considerably less than that of 1931, although the number of employees involved was almost double in the later year. As in 1931 the majority of the disputes did not continue long and involved relatively few workers. The chief industries affected were logging, sawmilling, salmon fishing, and fur and clothing manufacture.

Thirty-one of the disputes were against a reduction in wages, 24 for wage increases, including 5 for a combination of causes, 13 for securing or maintaining union wages and working conditions, and 7 to secure union recognition, 15 resulted from other causes affecting wages and working conditions, 10 were due to the discharge of workers, and 5 were sympathetic strikes.¹

The following is a record of the strikes and lockouts in the Dominion from 1913 to 1932:

STRIKES AND LOCKOUTS IN CANADA, 1913 TO 1932

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Workers involved	Time loss in working-days
1913	152	143	1,077	40,519	1,036,354
1914	63	58	261	9,717	490,850
1915	63	62	120	11,395	95,042
1916	120	118	332	26,538	236,814
1917	160	158	758	50,255	1,123,515
1918	230	228	782	79,743	647,942

LABOR AWARDS AND DECISIONS

Board of Reference Reports on Wage Dispute in Anthracite Industry

THE board of reference appointed November 3, 1932, in the wage controversy between the United Mine Workers of America and the anthracite operators was unable to agree on the question submitted to them as to the necessity for a 35 per cent cut in the wages of the mine workers.

The wage agreement between the anthracite operators and the United Mine Workers of America, entered into August 8, 1930, extends the provisions of the agreement of February 17, 1926, for the period beginning September 1, 1930, and ending April 1, 1936. Under the terms of this agreement it is provided that not oftener than once in any year either party may, in writing, propose modifications in the wage scales of said contract. The agreement provides also that where the parties fail to reach an adjustment in any issue in controversy, the matter shall be referred to a board of two men.

The board shall be obligated, within 90 days after appointment, to arrive at a decision on all issues in controversy, and to that end shall formulate their own rules and methods of procedure and may enlarge the board to an odd number, in which event a majority vote shall be binding.

In August, 1932, the operators proposed to modify the wage scales by a reduction of 35 per cent. Conferences were held from September 6 to October 4, but no agreement was reached by the committees representing the miners and the operators. On November 3, 1932, Frank Morrison and George Rublee were appointed as members of the reference board.

The representatives of the operators and the United Mine Workers submitted briefs. The time of the board to report was extended from the limit of 90 days to not later than March 1, 1933.

When it was found that the members of the board as constituted could not agree, Mr. Rublee requested Mr. Morrison to join him in enlarging the board to an odd number, as provided for in the agreement. Mr. Morrison refused, stating that in his opinion the words "may enlarge the board to an odd number" merely conferred an optional power. Since the members of the board were unable to arrive at a decision, they made individual reports on March 1, 1933.

The report of Mr. Morrison is, in part, as follows:

The operators contend that the wage scale of the miners is responsible for the high selling cost of anthracite, for which reason the market has been diverted to other fuels, because "the consumer is unwilling or unable to pay the present prices for anthracite." They assert and submit figures as their evidence that the loss of market antedates this depression; that the year 1923 marked the advent of the present wage scale and with it the highest prices the industry had ever known.

While the consolidated companies lost \$10,507,779 in 1932, the pay roll of the miners in 1932 was \$40,186,428 less than in 1931. The Department of Labor figures show that the anthracite pay roll of 1932 was 46.3 less than it was in 1929, and employment in 1932 was 37.7 less than it was in 1929.

In my opinion the figures for 1931 and 1932 are typical of what practically every other industry is experiencing in varying degrees in this depression. There is no one industry that is not feeling the shock of this economic cataclysm. To claim that the depression is not largely responsible for the slackening of returns to the anthracite industry is to ignore present conditions of industry and commerce not only in our own country but throughout the world.

As representative of the large profits made by the anthracite coal producing companies during the past 20 years the brief of the mine workers as of December 5, 1932, points out that the original stock of Delaware, Lackawanna & Western Coal Co. during the 22 years, 1910 to 1931, received dividends averaging over 31¼ per cent per year on its original par value, and, within the same period, its book value increased over threefold. Also during the period 1922-1931, inclusive, the average return on the original investment in stock of the Glen Alden Coal Co. was 144 per cent per year, and the average dividend returns on the stock of the Lehigh & Wilkes-Barre Coal Co., on the par value of its stock prior to a 100 per cent stock dividend in 1924, was 44½ per cent during the period 1909-1929.

In the light of these representative conditions for the years prior to the depression, the conclusion reached by the mine workers is logical. It is as follows:

"If enormous dividends are paid during prosperity and dividends or net profits maintained in depression; if, under prosperous conditions, resources are dissipated by huge distributions in the form of extra dividends; if stock dividends of 100 per cent and over are paid; then the stockholder in anthracite producing corporations must naturally expect reductions and omissions during such periods of depression as we are now experiencing."

The ability of the companies to withstand the existing small and temporary losses in income is conclusively demonstrated by the consolidated balance sheet of October 31, 1932. This shows cash and other current assets to the amount of \$80,322,174, and a combined surplus of \$119,075,213.

Economic recovery, as a matter of fact, depends upon the restoration of purchasing power to the twelve to fifteen millions of American workers of all classes who are now without employment. When this is done, the demand for anthracite will be revived, old markets will be restored, and new markets acquired.

It is clear, from the testimony submitted to the board, that freight rates and distributive costs absorb a large proportion of the price paid by wholesale and retail consumers of anthracite.

What is of fundamental importance to the future prosperity of the industry is the meeting of the operators and United Mine Workers in a spirit of complete cooperation for its permanent development. To this end I recommend that the procedure proposed by the United Mine Workers of America in their statement to the board of December 5, 1932, be adopted, as follows:

1. The joining of the board, the operators, and the mine workers in a request to the Interstate Commerce Commission that it institute an emergency inquiry as to the reasonableness of the anthracite freight rates.

2. To utilize paragraph 5 of the present agreement dated August 8, 1930, which provides for a joint permanent committee of 12 men, equally divided between the operators and the mine workers, to work for improvement in the industry. The work and duties of this economic council, as it were, should encompass the following:

- (a) To recognize the impossibility of effecting stability and prosperity in the anthracite industry by wage reductions.

- (b) To strive for conditions in the industry which will give a proper return to capital invested therein and will protect and advance the living standards of those employed in the industry.

- (c) To take such steps as may be necessary to lessen the prodigious number of fatalities and injuries now occurring in the industry.

- (d) To promote a sales policy which will destroy the wastes of competition and yield the best returns.

- (e) To work for a scientific readjustment of coal freight rates.

- (f) To protect the industry by opposing adverse tax legislation and to encourage the enactment of legislation which may be mutually determined to be of value to the industry.

- (g) And to unite in every practical way for the advancement of the industry and the increased sale and consumption of its products.

One of the powers conferred upon our board was that we may enlarge the board to an odd number, in which event a majority vote shall be binding. I would not concur in the request of Mr. Rublee to add an odd number because it is optional and discretionary on the part of the two members of the board to enter into such an agreement.

Mr. Rublee's report is, in part, as follows:

According to figures presented by the operators, which I was informed were compiled, except for the year 1932, from the reports of the mine inspectors of the State of Pennsylvania, and for 1932 were obtained directly from the operators, operating companies now employing 250 men or more each in 1927, had 188 collieries in operation employing 148,486 men; in 1929 the same companies had in operation 163 collieries employing 137,398 men; in 1931, they had 147 collieries in operation employing 123,388 men; in October, 1932, they had 113 collieries in operation employing 85,120 men. These figures indicate how steady and drastic the reduction in operations and employment has been.

The facts which are stated above indicate an extremely serious condition in the anthracite industry. It has been losing its markets for many years and recently at an alarming rate. The loss of these markets can be attributed only in part to the depression, since the competitive fuels have been greatly extending their markets in spite of the depression. The inroads of the competitive fuels into the anthracite market began long before the depression and there is no reason to suppose they would cease if the depression ended, unless the price of anthracite were reduced to an extent that would enable it to compete. It appears to be the view of both the operators and the miners that anthracite has certain advantages over other fuels. If this is so, price must be the consideration which mainly influences the average consumer in his choice of other fuel. The only thing, therefore, that can be done effectively to restore the market for anthracite, or even to enable it to maintain its present volume of sales, is a reduction of the price to the consumer.

In order to lower the price to the consumer costs must be reduced. The costs to be considered fall into three categories:

- (1) The mine costs.
- (2) The cost of transportation, or the freight charges.
- (3) The cost of distribution, including wholesalers' and retailers' costs.

The operators have recognized that costs of transportation and of distribution must be reduced, as well as the labor cost in the mines, to afford the reduction in price to the consumer necessary to increase sales and thus to start production up again and restore prosperity in the industry. If it were possible, these costs ought to be reduced simultaneously so that their combined effect could be at once reflected in the price of coal to the consumers. Reductions in all three classes of costs are necessary. An immediate reduction in freight rates, however, can hardly be expected and reduction in distribution costs is necessarily a gradual process. In the case of freight rates, either the consent of the railroads, which are suffering under their own financial difficulties, or the action of the Interstate Commerce Commission is required. In regard to the distribution some modification and improvement of existing methods will have to be worked out. One of the factors which affects this matter and which involves expense is the increasing service which it is considered necessary to give to the consumer. The process of reducing freight and dealer costs is thus one which will take time and will call for the cooperation of many individual organizations.

It is apparent that no substantial reduction of mine costs can be effected without also reducing the large item of cost of labor coming under the wage agreement. The consolidated production cost per ton was reduced from \$3.65 a ton to \$2.70, without any reduction in wage rates. This has been brought about largely by the closing of the higher cost collieries, new mechanical equipment, purchased instead of generated power, and an increase in stripping operations. These economies did not succeed in stimulating production because they did not enable a reduction in prices to be made sufficient to attract the consumer. Sales and production continued to decline and the labor eliminated by the economies remained without employment. A more substantial reduction in price is manifestly necessary, and there is therefore immediate need for a wage reduction.

The operators estimate that if the 35 per cent reduction in the wage scale which they propose were put into effect this would permit a reduction in the retail prices of prepared sizes of anthracite of \$1 per ton. They further state that the necessary reduction in retail prices is materially more than this, and that the balance of the reduction will be effected by the lowering of freight rates, of distribution costs, and of other elements of mine costs, which they are doing everything possible to bring about. They point out that if the 35 per cent reduction were granted the real wages of the mine workers, due to the decrease in the cost of living and the increase in the purchasing power of the dollar, would be as high as they were in 1920, when the wage scale was fixed by the United States Anthracite Commission.

Finally, let me say to the operators and to the mine workers that from the general view of the industry which my work on the board has given me, it appears evident that the industry is in a critical condition, and that several times the reduction possible through the proposed modification of the wage scale would be required in the retail prices of the prepared sizes, to revive the prosperity of the industry and restore normal employment for the mine workers. Such a reduction must be dependent on a decrease in transportation and distribution costs as well as in the mine costs. The reduction in the wage scale can not alone provide it, but such a reduction would arrest the threatened demoralization of the industry and, I believe, prevent immediate loss of employment for thousands of workers. For this reason, in my judgment, the mine workers would do well to accept a reduction as a necessary step toward the revival of the industry. But it would not be a solution. I think both operators and mine workers realize this.

Both parties to this proceeding are dependent on the industry and have a common interest in preserving it. The fact that the effort through the creation of this board to take a forward step in that common interest has ended in a deadlock does not relieve you of the necessity of finding a solution. You can not suffer your industry to disintegrate. When you come together again in another effort, for that will surely happen, let me urge the mine workers to consider whether it would not be in their real interest to contribute a dollar a ton to the rescue of the industry, and let me as strongly urge the operators to do all in their power to enable them to assure the mine workers that their contribution will be multiplied several times and promptly passed on to the consumer. I believe that cooperation of this kind is indispensable for a solution of the industry's problem.

HOUSING

Building Operations in Principal Cities of the United States, February, 1933

ACCORDING to reports received by the United States Bureau of Labor Statistics from 758 identical cities in the United States having a population of 10,000 or over, there was a decrease of 46.4 per cent in indicated expenditures for total building operations in February, 1933, as compared with January, 1933.

This month, for the first time, the bureau shows building-permit data for cities in the United States having a population of 10,000 or over. Comparisons of February data with January data, as shown in Tables 1 to 3, are for cities having a population of 10,000 or over. Comparisons of February, 1933, with February, 1932, as shown in Tables 6 to 8, are for cities having a population of 25,000 or over. Table 9 shows data for all cities having a population of 10,000 or over from which reports were received by the bureau.

The cost figures as shown in the following tables apply to the cost of the buildings as estimated by the prospective builder on applying for his permit to build. No land costs are included. Only building operations within the corporate limits of the cities enumerated are shown.

Comparisons, January, 1933, and February, 1933

TABLE 1 shows the estimated cost of new residential buildings, of new nonresidential buildings, of additions, alterations, and repairs, and of total building operations in 758 identical cities of the United States having a population of 10,000 or over, by geographic divisions.

TABLE 1.—ESTIMATED COST OF NEW BUILDINGS, OF ADDITIONS, ALTERATIONS, AND REPAIRS, AND OF TOTAL BUILDING CONSTRUCTION IN 758 IDENTICAL CITIES, AS SHOWN BY PERMITS ISSUED IN JANUARY AND FEBRUARY, 1933, BY GEOGRAPHIC DIVISIONS

South Central.....	585,754	520,517	-11.1	4,461,014	2,553,809	-42.8	72
Mountain and Pacific.....	914,655	990,232	+8.3	19,235,069	3,088,879	-83.9	81
Total.....	7,110,885	6,213,594	-12.6	45,776,544	24,526,200	-46.4	758

According to reports received from these 758 cities, there was a decrease of 46.4 per cent in indicated expenditures for total building operations. Three of the geographic divisions, however, showed increases. Although the usual seasonal trend for residential building, as well as other classes of building, is downward, comparing February with January, there was an increase in indicated expenditures for residential building during February. The increase for this type of building was 35.8 per cent, comparing expenditures in February with those in the previous month.

Indicated expenditures for new nonresidential buildings decreased 66.6 per cent, comparing February with January. The estimated cost of additions, alterations, and repairs decreased 12.6 per cent comparing these two months.

Indicated expenditures for total building operations reached a total of \$24,526,200 during February, 1933, for these 758 cities.

Table 2 shows the number of new residential buildings, of new nonresidential buildings, of additions, alterations, and repairs, and of total building operations in 758 identical cities of the United States, by geographic divisions.

TABLE 2.—NUMBER OF NEW BUILDINGS, OF ADDITIONS, ALTERATIONS, AND REPAIRS, AND OF TOTAL BUILDING CONSTRUCTION IN 758 IDENTICAL CITIES, AS SHOWN BY PERMITS ISSUED IN JANUARY AND FEBRUARY, 1933, BY GEOGRAPHIC DIVISIONS

Per cent of change.....		+610.5		+305.8		+35.5		+15.3

Decreases were shown in both the indicated expenditures and in the total number of families provided for in 1-family dwellings and in 2-family dwellings. There was, however, a marked increase in the indicated expenditures for apartment houses and in the number of family-dwelling units provided in this type of dwelling.

Indicated expenditures for all types of dwellings showed an increase of 35.5 per cent, while the number of family-dwelling units provided increased 15.3 per cent.

Table 4 shows the index number of families provided for, the index numbers of indicated expenditures for new residential buildings, for

new nonresidential buildings, for additions, alterations, and repairs, and for total building operations.

TABLE 4.—INDEX NUMBERS OF FAMILIES PROVIDED FOR AND OF THE ESTIMATED COST OF BUILDING OPERATIONS AS SHOWN BY PERMITS ISSUED IN PRINCIPAL CITIES OF THE UNITED STATES

[Monthly average, 1929=100]

Month	Families provided for	Estimated cost of—			
		New residential buildings	New non-residential buildings	Additions, alterations, and repairs	Total building operations
February 1930	43.0	34.7	51.8	57.5	44.1
February 1931	40.3	30.3	43.8	48.6	37.9
February 1932	13.0	9.1	16.5	26.7	14.3
January 1933	4.9	3.4	26.8	16.2	14.7
February 1933	5.6	4.6	8.9	14.2	7.9

The index numbers for new residential buildings and for families provided for showed an increase in February as compared with January. The index numbers, however, for new nonresidential buildings, for additions, alterations, and repairs, and for total building operations showed a decrease for February as compared with January.

Comparisons of Indicated Expenditures for Public Buildings

TABLE 5 shows the value of contracts awarded for public buildings by the various agencies of the United States Government and by the various State governments during the months of February, 1932, and January and February, 1933, by geographic divisions.

TABLE 5.—CONTRACTS FOR PUBLIC BUILDINGS AWARDED BY THE UNITED STATES GOVERNMENT AND BY STATE GOVERNMENTS DURING FEBRUARY 1932, AND JANUARY AND FEBRUARY, 1933, BY GEOGRAPHIC DIVISIONS

Geographic division	Federal			State		
	February, 1932	January, 1933	February, ¹ 1933	February, 1932	January, 1933	February, ¹ 1933

¹ Subject to revision.

The value of contracts awarded by the Federal Government during February, 1933, was \$6,140,195, a decrease of more than \$10,000,000 as compared with February, 1932.

The value of contracts awarded by the various State governments during February, 1933, was only \$1,002,639, a decrease of over \$5,000,000 as compared with January, 1933, and a decrease of over \$1,500,000 as compared with February, 1932.

Whenever a contract is awarded by either the Federal or a State government in a city having a population of 10,000 or over, the number or cost of such building is included in the tables shown herein.

Comparisons, February, 1933, with February, 1932

TABLE 6 shows the estimated cost of new residential buildings, of new nonresidential buildings, of additions, alterations, and repairs, and of total building operations in 351 identical cities of the United States having a population of 25,000 or over, for the months of February, 1933, and February, 1932, by geographic divisions.

Per cent of change.....		+24.1		-16.0		-44.7		-51.3

There was a decrease in both the number of families provided for and the estimated cost of 1-family dwellings and 2-family dwellings. Indicated expenditures for apartment houses, however, increased 24.1 per cent, although the number of family-dwelling units decreased 16.0 per cent. Indicated expenditures for housekeeping dwellings of all kinds decreased 44.7 per cent, while the number of family-dwelling units decreased 51.3 per cent, comparing February, 1933, with February, 1932.

Details by Cities

TABLE 9 shows the estimated cost of new residential buildings, of total building operations, and the number of families provided for in new dwellings in each of the cities having a population of 10,000 or over for which reports were received in February, 1933.

Beginning with the month of January, 1933, the bureau extended the scope of its work on building operations to take in all cities in the United States having a population of 10,000 or over. Previous to that time, data were collected only from cities having a population of 25,000 or over.

Permits were issued during February, 1933, for the following important building projects: In the Borough of the Bronx for an apartment house to cost over \$3,000,000; in Austin, Tex., for a junior high school building to cost over \$300,000; in Sacramento, Calif., for a school building to cost nearly \$300,000; in the Borough of Manhattan for a hospital building to cost \$800,000; in Oneonta, N. Y., for a public-utilities building to cost \$300,000; in Rochester, N. Y., for a State hospital building to cost nearly \$800,000.

Contracts were awarded by the Supervising Architect of the United States Treasury Department for a post office in Columbus, Ohio, to cost over \$1,200,000; for a Federal courthouse in Fort Worth, Tex., to cost over \$600,000; and for an appraisers'-stores building in Baltimore, Md., to cost \$670,000.

Building Operations in Principal Cities in 1932**Part 2. Types of Buildings**

BUILDING permit reports have been received by the Bureau of Labor Statistics from 370 cities of the United States having a population of 25,000 or over, for the calendar year 1932.

It was necessary to send agents of the bureau to only two of these cities to compile reports from records on file in the offices of the local building officials, all of the other 368 cities having replied to questionnaires sent by mail. This is quite a contrast with the earlier experience in collecting this information. For example, in 1922 it was necessary for agents of the bureau to visit 33½ per cent of the cities to compile data for that year. This proportion was reduced to 6.1 per cent in 1928; to 2.6 per cent in 1929; to 1.9 per cent in 1930; to eight-tenths of 1 per cent in 1931; and to less than six-tenths of 1 per cent in 1932. From this record it will be seen that local building officials are fully alive to the value of published reports on building permits and are lending their assistance to the work of the bureau.

The States of Illinois, Massachusetts, New York, New Jersey, and Pennsylvania, through their departments of labor, are cooperating with the United States Bureau of Labor Statistics in the collection of these data. In studying the following tables, it should be borne in mind that the figures refer to the cost of the buildings only, and to buildings within the corporate limits of the cities enumerated. No land costs are included.

Table 1 shows the total number of new buildings; the estimated cost of the different kinds of new buildings for which permits were issued in these 370 cities for the year 1932; the per cent that each kind forms of the total number; the per cent that the cost of each kind forms of the total cost; and the average cost per building.

In the 370 cities for which reports were received for the calendar year 1932, permits were issued for 92,790 new buildings, having an estimated cost of \$414,216,510. Of the total number of new buildings, 27 per cent were residential buildings and 73 per cent were nonresidential buildings. By far the most numerous class of residential buildings was 1-family dwellings. They form 24.4 per cent of the total number of new buildings. Two-family dwellings were the only other class of residential buildings, comprising more than 1 per cent of the total number of new buildings. In the nonresidential group, private garages were the most numerous, followed in order by sheds and stores and warehouses.

Of the indicated expenditures for new buildings during the year 1932, 27.7 per cent were for residential buildings and 72.3 per cent for nonresidential buildings. One-family dwellings accounted for the largest expenditure in the residential group and were exceeded only by one class of nonresidential buildings, public buildings. Of the residential group, indicated expenditures for apartment houses ranked next to 1-family dwellings. The expenditures for apartment houses, however, were only slightly more than one-seventh of the expenditures for 1-family dwellings.

TABLE 1.—NUMBER AND COST OF NEW BUILDINGS AS STATED BY PERMITS ISSUED IN 370 CITIES, 1932, BY KIND OF BUILDING

Kind of building	New buildings for which permits were issued				
	Number	Per cent	Estimated cost

Total.....	67,742	73.0	299,331,076	72.3	4,419
Grand total.....	92,790	100.0	414,216,510	100.0	4,464

¹ Less than one-tenth of 1 per cent.

Indicated expenditures for public buildings were higher than for any other class in the nonresidential group. Schools and libraries ranked next, and stores and warehouses third. If we group public buildings, public works and utilities, institutional buildings, and schools and libraries, which are wholly or partially erected from public funds, we find that 46.8 per cent of the total indicated expenditures for new buildings during 1932 were accounted for by buildings of these classes.

The average cost of all new buildings for which permits were issued during 1932 was \$4,464. The average cost of new residential buildings was \$4,587. The most expensive class of residential buildings was "all other." This group includes such buildings as clubs with bedrooms, college dormitories, Y. M. C. A. and Y. W. C. A. buildings with bedrooms, etc. Hotels ranked second in average cost in the residential group.

New nonresidential buildings cost \$4,419 apiece. If, however, we exclude from the nonresidential group private garages and sheds, of which there are a great number, we find that the average cost of the remaining buildings in the nonresidential group is \$22,680. Public buildings, the most expensive type in this group, averaged \$468,582 per building. This was more than twice the cost of schools and libraries, the second most expensive class.

Building Trend, 1931 and 1932

TABLE 2 shows the number and cost of the different kinds of buildings for which permits were issued in 360 identical cities for the years 1931 and 1932, and the per cent of increase or decrease in 1932 as compared with 1931. It will be observed that the number of cities differs from the number in Table 1.

TABLE 2.—NUMBER AND COST OF NEW BUILDINGS AND OF ALTERATIONS AND REPAIRS FOR WHICH PERMITS WERE ISSUED IN 360 IDENTICAL CITIES DURING 1931 AND 1932, BY KIND OF BUILDING

All other.....	2,714	2,816,973	1,402	5,504,975	−48.3	+95.4
Total nonresidential buildings.....	110,906	664,580,703	67,180	297,253,248	−39.4	−55.3
Total new buildings.....	174,462	1,123,157,888	91,901	410,188,192	−47.3	−63.5
Additions, alterations, and repairs.....	240,124	202,847,503	199,012	110,314,292	−17.1	−45.6
Grand total, all buildings.....	414,586	1,326,005,391	290,913	520,502,484	−29.8	−60.7

There was a decrease of 29.8 per cent in the number of building operations, comparing permits issued in 1932 with those issued in 1931. Indicated expenditures for total building operations decreased 60.7 per cent comparing these two years. Additions, alterations, and repairs decreased 17.1 per cent in number and 45.6 per cent in cost.

Comparing 1932 residential buildings with those of 1931, there was a decrease of 61.1 per cent in number and a decrease of 75.4 per cent in indicated expenditures. All classes of residential buildings showed decreases in indicated expenditures, and all, except lodging houses, showed decreases in number. Permits were issued for 2 more lodging houses in 1932 than in 1931. Decreases in expenditures in the resi-

dential group ranged from 60.6 per cent in the case of lodging houses to 94 per cent in the case of multifamily dwellings with stores.

Nonresidential buildings showed a decrease of 39.4 per cent in number and a decrease of 55.3 per cent in estimated cost. All types of nonresidential buildings, except sheds and stables and barns, showed decreases in number, and all, except "All other," showed decreases in indicated expenditures.

Families Provided for, 1931 and 1932

TABLE 3 shows the number and per cent of families provided for in each of the different kinds of dwellings for which permits were issued in 360 identical cities during the calendar years 1931 and 1932.

TABLE 3.—NUMBER AND PER CENT OF FAMILIES TO BE HOUSED IN NEW DWELLINGS FOR WHICH PERMITS WERE ISSUED IN 360 IDENTICAL CITIES, 1931 AND 1932, BY KIND OF DWELLING

Kind of dwelling	Number of new buildings for which permits were issued		Families provided for			
			Number		Per cent	
	1931	1932	1931	1932	1931	1932
1-family dwellings.....	55,010	22,328	55,010	22,328	51.7	73.2
2-family dwellings.....	5,608	1,653	11,216	3,306	10.5	10.8
1-family and 2-family dwellings with stores combined.....	541	239	762	310	.7	1.0
Multifamily dwellings.....	2,177	432	37,120	4,416	34.9	14.5
Multifamily dwellings with stores combined.....	99	33	2,235	157	2.1	.5
Total.....	63,435	24,685	106,343	30,517	100.0	100.0

During 1932, provisions were made for 30,517 families in the new buildings for which permits were issued in the 360 cities. This is a decrease of over 70 per cent as compared with 1931. There was a marked decrease in the number of family dwelling units provided in each class of dwellings, comparing 1932 with 1931.

The percentage of families provided for in 1-family dwellings showed a marked increase, comparing 1932 with 1931. There was a slight increase in 2-family dwellings, but a large decrease in the percentage of families provided for in apartment houses comparing 1932 with the previous year.

Number of Buildings, by Cities

TABLE 4 shows, for the years 1931 and 1932, the number of new residential buildings, the number of new nonresidential buildings, the number of additions, alterations, and repairs, together with the number of families provided for, and the ratio of families provided for per 10,000 of population, in 360 identical cities.

During the year 1932, family dwelling units were provided for 30,517 families, or at the ratio of 6 families per each 10,000 of population. During 1931, family dwelling units were provided in these cities for 106,343 families, which was at the ratio of 21.3 families to each 10,000 of population.

All geographic divisions showed decreases in the number of families provided for. Decreases were also shown in all geographic divisions in the number of new residential buildings, of new nonresidential buildings, of additions, alterations, and repairs, and of total building operations, comparing 1932 with 1931.

TABLE 4.—NUMBER OF BUILDINGS FOR WHICH PERMITS WERE ISSUED IN PRINCIPAL CITIES IN 1931 AND 1932

New England States

¹ Census 1930.

Building Operations, 1921 to 1932

TABLE 5 shows for 257 identical cities the estimated expenditures for new residential buildings, for new nonresidential buildings, for additions, alterations, and repairs, and for total building operations; the estimated population of each year 1921 to 1932; the number of families provided for; the ratio of families provided for to each 10,000 of population; and the index number of families provided for weighted by population. Comparable figures are available back to 1921 for these 257 cities only.

TABLE 5.—ESTIMATED EXPENDITURES FOR EACH CLASS OF NEW BUILDINGS, ADDITIONS, ALTERATIONS, AND REPAIRS, FAMILIES PROVIDED FOR AND RATIO TO POPULATION, AND INDEX NUMBERS THEREOF IN 257 IDENTICAL CITIES, 1921 TO 1932

¹ Actual enumeration.

During 1932, permits were issued for building operations in these 257 cities to cost \$481,490,267. This is only 25.9 per cent of the estimated expenditures for building operations for which permits were issued in the year 1921. From 1921 to 1925, there was an increase in indicated expenditures for total building operations in each year. During the peak year 1925, the index number stood at 217.6. There has been a decrease each year since 1925.

Residential buildings increased each year from 1921 to 1925, and decreased each year from that year to 1932, the 1932 index number

standing at 11.0. New nonresidential buildings reached a peak of 211.4 in 1925 and has decreased until the index number stands at 43.4 in 1932. The index number of additions, alterations, and repairs reached a peak of 127.3 in 1923. The index number for 1932 is 36.2.

In comparing the above figures through the 12-year period it should be kept in mind that there have been decided changes in the cost of building construction. The change in the wholesale price of building as compiled by the Bureau of Labor Statistics and recomputed on a 1921 base is shown by the index numbers on page 852. The bureau also has information as to the change in the wage rates of organized building-trade workers but no similar figures for unorganized workers. Index numbers showing the change for the organized building mechanics are given on page 852. Because of incomplete figures for the labor cost of building no attempt is made to give an index for the change in the total cost of building construction.

The index number of families provided for climbed each year to the peak 218.8 in 1925, and then declined steadily so that the index number for 1932 fell to 12.2. In 1921, 61.4 families were provided for to each 10,000 of population; in 1925, the peak year, 121.8 family-dwelling units were provided to each 10,000 of population. The index number of families provided for adjusted to population was 9.6 for the year 1932.

Average Cost of Buildings per Family, 1921 to 1932

TABLE 6 shows for each year, 1921 to 1932, the average cost per family-dwelling unit of each type of housing accommodation for which permits were issued in the 257 identical cities from which reports were received.

TABLE 6.—AVERAGE COST OF NEW DWELLINGS¹ PER FAMILY IN 257 IDENTICAL CITIES, 1921 TO 1932

[This table does not attempt to show the change in the cost of erecting an identical building, but it does show the change in the cost of such building as was erected]

Year	Average cost of new dwellings per family				Index numbers of cost of dwellings per family			
	1-family dwellings	2-family dwellings ²	Multi-family dwellings ³	All classes of dwellings	1-family dwellings	2-family dwellings ²	Multi-family dwellings ³	All classes of dwellings

1932.....	3,943	3,250	3,011	3,705	99.3	86.4	74.9	93.9

¹ Includes only cost of the buildings.

² Includes 1-family and 2-family dwellings with stores.

³ Includes multifamily dwellings with stores.

In 1921 the average cost of all 1-family dwellings for which permits were issued in these 257 cities was \$3,972. There was an increase each year in this cost, including the year 1928; a slight drop in 1929;

another rise in 1930, when the peak expenditure of \$4,993 was reached. In 1931 the average expenditure dropped over \$100, and, in the year 1932, there was a drop of nearly \$900 in the average cost of the 1-family dwellings for which permits were issued in these cities, the 1932 price for 1-family dwellings being \$3,943. It must not be assumed that dwellings of the same type were erected each year, as explained above.

The average cost per family of 2-family dwellings in 1921 was \$3,762. By 1926, the average per family cost of this type of dwelling had reached \$4,480. There has been a decrease each year since, the average expenditure for 2-family dwellings in 1932 being \$3,250 per family.

The multifamily dwellings erected in 1921 averaged \$4,019 per dwelling unit. The highest price reached per dwelling unit occurred in 1924. During that year, apartment houses for which permits were issued cost \$4,418 per family. The average price fluctuated considerably in the succeeding years with the trend mostly downward. The year 1932 showed the lowest price of any of the 12 years under discussion, the average price per family dwelling unit of apartment houses for which permits were issued during that year being \$3,011.

The average cost per family of all classes of dwellings for which permits were issued during 1932 was \$3,705, compared with \$3,947 in 1921. This is a decrease of 6.1 per cent. In 1925, the peak year, the average cost of all classes of dwellings was \$4,464 per family dwelling unit.

Families Provided for, 1921 to 1932

TABLE 7 shows the number and percentage distribution of families provided for in the different kinds of dwellings in 257 identical cities from which reports were received each year since 1921

TABLE 7.—NUMBER AND PER CENT OF FAMILIES PROVIDED FOR IN DIFFERENT KINDS OF DWELLINGS IN 257 IDENTICAL CITIES, 1921 TO 1932

1931.....	48,330	11,310	38,538	98,178	49.2	11.5	39.3
1932.....	19,528	3,400	4,453	27,381	71.3	12.4	16.3

¹ Includes 1-family and 2-family dwellings with stores.

² Includes multifamily dwellings with stores.

During the calendar year 1932, living quarters were provided for 27,381 families in the 257 cities. Of these families, 71.3 per cent were provided for in 1-family dwellings, 12.4 per cent in 2-family dwellings, and 16.3 per cent in apartments.

One-family dwellings accounted for a larger percentage of the total number of family dwelling units during 1932 than during any of the other years for which data has been collected by the Bureau of Labor Statistics. This is the first year since 1921 that more than one-half of the total family dwelling units provided have been in 1-family dwellings. During 1928, only 35.2 per cent of the total family dwelling units erected were provided in 1-family dwellings. In contrast, the percentage of family dwelling units provided in apartment houses was much lower than for any of the other years covered by the bureau's studies. In 1921, 24.4 per cent of the family dwelling units provided were in apartment houses. This percentage rose each year until 1928, when 53.7 per cent of all families provided for were to live in apartment houses. There has been a drop in this percentage until 1932, when only 16.3 per cent of the family dwelling units provided were in apartment houses.

Table 8 shows the percentage of families provided for by the different types of dwellings in the years 1921 to 1932, inclusive, in 257 identical cities, by population groups.

During the year 1932, in each population group, more families were provided for in 1-family dwellings than in both 2-family dwellings and apartment houses. Of the 14 cities having a population of 500,000 or over, 58.2 per cent of all families provided for during 1932 were accommodated in 1-family dwellings. The highest previous percentage of families provided for in any one year in 1-family dwellings was in 1921, when 44.2 per cent of the number of families accommodated during that year were to be housed in this type of dwelling. During 1928, only 22.1 per cent of the families provided for were housed in 1-family dwellings, and 67.2 per cent were housed in apartment houses, in these cities.

The percentage of families provided for in apartment houses was lower during 1932 than during any of the previous years in all population groups.

TABLE 8.—PER CENT OF FAMILIES PROVIDED FOR BY DIFFERENT TYPES OF DWELLINGS IN CITIES HAVING A POPULATION OF 25,000 OR OVER, 1921 TO 1932

Population group	Year	Total number of families provided for	Per cent of families provided for in—

¹ Includes 1-family and 2-family dwellings with stores.² Includes multifamily dwellings with stores.³ Less than one-tenth of 1 per cent.⁴ Applications filed.

During 1932, 12 of the 14 cities provided for a larger proportion of the family units in 1-family dwellings than in 2-family or multifamily dwellings. Buffalo, however, provided for the largest percentage of its dwelling units in 2-family dwellings, and New York City provided more housing units in apartment houses than in either 1-family or 2-family dwellings. Philadelphia provided, during 1932, for a smaller percentage of its families in apartment houses than any other city in this group. Only 1.1 per cent of the total family dwelling units provided in Philadelphia were in apartment houses, as compared

with 95.1 per cent in 1-family dwellings and 3.7 per cent in 2-family dwellings. In contrast, in the Borough of Manhattan no 1-family or 2-family dwellings were erected, all 471 families provided for in new buildings were to be housed in apartment houses. Detroit and Pittsburgh also provided for 90 per cent or more of the total family dwelling units in 1-family dwellings.

Five Leading Cities, 1921 to 1932

DURING 1932, the five cities leading in total expenditures for building operations were New York, Washington, Philadelphia, Los Angeles, and San Francisco, in the order named. New York and Los Angeles have been among the five leading cities for every year since 1921. Philadelphia has been one of the five leading cities since 1922. Washington has been among the select group only during the past three years. This is the first appearance of San Francisco among the first five.

Table 10 ranks the cities according to their total expenditures for building construction of all kinds as shown by permits issued.

TABLE 10.—FIVE CITIES LEADING IN TOTAL EXPENDITURE, EACH YEAR, 1921 TO 1932

		Glendale, Calif.	23.6

¹ The ratio of families provided for in Miami in 1924 was based on the population as estimated by the Census Bureau for that year. In the light of the actual census taken by the State enumeration in 1925, it would seem that the estimate for 1924 was below the actual population for that year, hence the ratio here shown for 1924 is probably higher than the actual population in that year would warrant.

² Population not estimated in 1924 or 1925; 1923 estimate used.

During 1932, Austin, Tex., provided for more family dwelling units per 10,000 of population than any other city in the United States. This city, however, provided for only 44 families to each 10,000 population. The lowest of the leading five cities for the year 1931 provided for 73.4 families per 10,000 of population. Back in the years of the Florida land boom, Miami, Fla., provided for more than 2,000 families per 10,000 of population.

The figures in Table 11 show the number of families provided for per 10,000 of population, according to the last estimate available each year, as prepared by the Bureau of the Census. The 1930 ratios are based on the 1930 census enumeration.

Prices of Building Materials, Wages, and Rents

THE Bureau of Labor Statistics collects monthly the wholesale prices of building materials and from such figures computes index numbers. Retail prices paid by builders are not available, but it is believed that the trend of retail prices follows closely that of wholesale prices.

The index numbers shown in Table 12 for wage rates in the building trades are for wage rates for union labor only. In many cities the building trades are highly organized, while in others there is considerable nonunion labor. The bureau has no data concerning the trend of wages of nonunion workers.

Information concerning rents are collected by the bureau semi-annually in 32 cities.

Based on 1921, the index number of expenditures for building operations reached a peak of 217.6 in 1925, and has been falling steadily ever since. The index number of wholesale prices of building materials reached a peak of 111.6 in 1923. There has been a steady decline each year since, except in 1929, when there was a slight increase over 1928.

Union wage rates in the building trades reached a peak of 137.9 in 1931. The 1932 figures fell to 117.5.

Rents climbed slightly each year until the peak, 104.7, was reached in 1924, and have declined each year since that date.

TABLE 12.—INDEX NUMBERS OF ESTIMATED EXPENDITURES FOR BUILDING OPERATIONS, OF WHOLESALE PRICES OF BUILDING MATERIALS, OF UNION WAGE RATES IN THE BUILDING TRADES, AND OF RENT, 1921 TO 1932

1932.....	25.9	73.3	117.5	76.7

WAGES AND HOURS OF LABOR

Wages and Hours of Labor in the Pottery Industry, 1925 and 1932

THERE are presented below the results of the study made by the Bureau of Labor Statistics of wages and hours of labor of wage earners in the general-ware pottery industry in the year 1932, together with comparable data for a similar study of this industry made in 1925. The data are presented by occupation and sex, for each of two kinds of pottery ware, semivitreous and vitreous, and for all occupations combined in each of these two divisions of the industry. The details of the 1925 study were published in Bulletin No. 412, and those of the 1932 study will be published later as a bulletin of the bureau. Each study covered a representative pay period of two weeks in the summer and the early fall, and the studies are therefore representative of conditions as to hours and earnings of wage earners in such potteries as of that period in 1925 and 1932.

In making the studies agents of the bureau collected individual wage figures for 6,666 males and 3,657 females from the pay rolls and other records of 46 representative semivitreous-ware potteries in 8 States and 1,619 males and 1,065 females in 7 vitreous-ware potteries in 4 States in 1925; and for 4,086 males and 2,381 females of 27 semivitreous-ware potteries in 9 States and 1,429 males and 990 females of 12 vitreous-ware potteries in 4 States in 1932. Many of the semivitreous potteries that were included in 1925 were out of business or not in operation in 1932. The semivitreous-ware wage figures for 1925 are for 31 potteries in Ohio, 7 in West Virginia, 3 in New Jersey, 2 in Pennsylvania, and 1 each in Maryland, Tennessee, and Virginia; and for 1932 are for 11 in Ohio, 8 in West Virginia, 2 in New Jersey, and 1 each in Pennsylvania, Maryland, Tennessee, Virginia, Illinois, and Indiana. The vitreous-ware figures in 1925 are for 3 potteries in New York, 2 in Pennsylvania, and 1 each in New Jersey and West Virginia, and in 1932 are for 4 in New York, 3 in Pennsylvania, 3 in West Virginia, and 2 in Ohio.

Average Days, Hours, and Earnings

By Occupation and Sex

TABLE 1 shows for the wage earners covered in each of the more important occupations in semivitreous and also in vitreous ware potteries in 1925 and in 1932 and also for a miscellaneous group designated as "other employees" average days worked in two weeks, average hours worked in two weeks and per day, and average earnings in two weeks, per day, and per hour. The miscellaneous group of "other employees" includes all occupations in each of the two kinds of potteries other than those referred to as important occupations. No occupation in the miscellaneous group is considered of enough importance to warrant showing averages for it.

In 1932 the 6,467 wage earners of the 27 semivitreous potteries worked an average of 7.5 days and 57.6 hours in two weeks and 7.7

hours per day, and earned an average of \$25.93 in two weeks, \$3.47 per day, and 45 cents per hour. These averages are 1.6 days and 14.9 hours less in two weeks and three-tenths of an hour less per day and \$17.34 less in two weeks, \$1.29 less per day, and 14.6 cents less per hour than those for the 10,323 wage earners of the 46 semivitreous potteries covered in the 1925 study. Average earnings per hour in 1932 were 24.5 per cent less than in 1925.

In 1932 the 2,419 wage earners of the 12 vitreous potteries included in the report worked an average of 6.1 days and 43.7 hours in two weeks and 7.2 hours per day and earned an average of \$19.15 in two weeks, \$3.16 per day, and 43.8 cents per hour. These averages are 4 days 37.4 hours less in two weeks, and eight-tenths of an hour less per day, and \$23.08 less in two weeks, \$1.03 less per day, and 8.3 cents less per hour than the averages for the 2,684 wage earners of the 7 vitreous potteries covered in the 1925 study. Average earnings per hour in 1932 were 15.9 per cent less than in 1925.

In semivitreous potteries average earnings per hour of males in each of the occupations in the table except two (pressers and ware carriers) and of females in each occupation in which females were reported were less in 1932 than in 1925. Pressers, male, in 1925 (12 in 9 potteries) earned an average of 64.9 cents per hour and in 1932 (1 in 1 pottery) earned an average of \$1.22 per hour, and ware carriers earned an average of 32.6 cents per hour in 1925 and 34.3 cents in 1932. Averages are shown in the table for 1925 and 1932 for males in 44 occupations and for females in 15 occupations.

In vitreous potteries average earnings per hour of males in each occupation except four (batters-out, dish makers, turners' spongers, and ware carriers) were less in 1932 than in 1925, and of females in each occupation except two (gold stampers and wrappers) in which wage figures for them were reported were less in 1932 than in 1925. Averages are shown in the table for 1925 and 1932 for males in 41 occupations and the group of other employees and for females in 14 occupations and the group of other employees.

TABLE 1.—AVERAGE DAYS, HOURS, AND EARNINGS IN THE POTTERY INDUSTRY 1925 AND 1932, BY KIND OF WARE, OCCUPATION, AND SEX

Kind of ware, occupation, and sex	Year	Number of establishments	Number of wage earners	Average number of days worked in 2 weeks	Average hours worked—		Average earnings—		
					In 2 weeks	Per day	In 2 weeks	Per day	Per hour
<i>Semivitreous</i>									
Slip makers, male.....	1925	46	54	9.3	83.7	9.0	\$62.50	\$6.74	\$0.746
	1932	27	37	8.9	70.9	8.0	36.82	4.14	.519

By Sex and Geographical Group

Table 2 shows average days, hours, and earnings for the wage earners covered in semivitreous potteries in 1925 and 1932 and in vitreous potteries in 1932. The averages are for each sex separately and for both sexes combined, and are shown by groups instead of by individual States, as for many of the major industries, to avoid presenting figures for one pottery alone.

The geographical groups for semivitreous potteries are:

Group 1, which includes potteries in East Liverpool, Ohio, and nearby potteries in West Virginia directly across the Ohio River from East Liverpool.

Group 2, which includes potteries in Ohio outside East Liverpool, and in Pennsylvania, Illinois, and Indiana.

Group 3, which includes potteries in Maryland, Tennessee, and Virginia.

Group 4, which includes potteries in West Virginia other than those near East Liverpool, and those in New Jersey.

The groups for vitreous potteries are:

Group 1, New York.

Group 2, Pennsylvania.

Group 3, Ohio and West Virginia.

In 1932 the 4,086 males in all groups combined in semivitreous potteries worked an average of 7.7 days and 59.3 hours in two weeks and 7.7 hours per day, and earned an average of \$31.74 in two weeks, \$4.13 per day, and 53.5 cents per hour. These averages, as compared with those for the 6,666 males covered in the 1925 study, are 1.5 days and 15.1 hours less in two weeks and four-tenths of an hour less per day, \$20.70 less in two weeks, \$1.57 less per day, and 17 cents less per hour. In 1932 the 2,381 females in all groups combined in semivitreous potteries worked an average of 7.1 days and 54.6 hours in two weeks and 7.7 hours per day, and earned an average of \$15.95 in two weeks, \$2.25 per day, and 29.2 cents per hour. These averages are 1.8 days and 14.4 hours less in two weeks and one-tenth of an hour less per day and \$10.59 less in two weeks, 74 cents less per day, and 9.3 cents less per hour than those for the 3,657 females included in the study in 1925.

Earnings per hour of males in semivitreous potteries averaged 70.5 cents in 1925 and 53.5 cents in 1932, and ranged, by groups, from a low of 56.2 cents for group 3 to a high of 73.6 for group 1 in 1925 and from 46.5 cents for group 3 to 56.9 cents for group 1 in 1932. Those for females averaged 38.5 cents per hour in 1925 and 29.2 cents in 1932, and ranged, by groups, in 1925 from 31 cents for group 3 to 41.4 cents for group 1, and in 1932 from 25.1 cents for group 3 to 31.2 cents for group 1. Those for males and females together averaged 59.6 cents per hour in 1925 and 45 cents in 1932 and ranged, by groups, from 48.6 to 63.1 cents in 1925 and from 41.1 to 48.1 cents per hour in 1932.

TABLE 2.—AVERAGE DAYS, HOURS, AND EARNINGS IN SEMIVITREOUS AND VITREOUS POTTERY WARE, 1925 AND 1932, BY SEX, AND GEOGRAPHICAL GROUP

¹ No 1925 averages shown for this ware because only 4 of such potteries were included in report in that year.

By Occupations and Geographical Groups

The averages in Table 3 are limited to the wage earners in eight representative occupations in semivitreous and four in vitreous potteries in order to save space and expense in printing. They illustrate fairly the variations of days, hours, and earnings in each of the occupations in the two kinds of potteries in the different geographical groups.

Wages and Hours of Union Quarry Workers in the United States, January, 1933

QUESTIONNAIRES sent by the Bureau of Labor Statistics in January, 1933, to all local unions of organized quarry workers in the United States resulted in reports of rates of wages and hours of labor in the localities shown in the following table. As near as can be estimated the total number of workers for whom reports were received amounts to about 35 per cent of the total union membership. Data are not available as to the remaining 65 per cent of membership, for which no replies were received.

Wage-Rate Changes in American Industries

Manufacturing Industries

IN THE following table is presented information concerning wage-rate adjustments occurring between January 15, 1933, and February 15, 1933, as shown by reports received from manufacturing establishments supplying employment data to this Bureau. Of the 17,773 manufacturing establishments included in the February survey, 17,218 establishments, or 96.9 percent of the total, reported no change in wage rates over the month interval. The 2,529,943 employees not affected by changes in wage rates constituted 97.5 percent of the total number of employees covered by the February trend-of-employment survey of manufacturing industries.

Decreases in wage rates were reported by 552 establishments in 71 of the 89 industries surveyed. These establishments represented 3.1 percent of the total number of establishments covered. The wage-rate decreases reported averaged 11.5 percent and affected 62,178 employees, or 2.4 percent of all employees in the establishments reporting.

Three establishments in three industries reported wage-rate increases in February, averaging 17.9 percent, and affecting 1,551 employees.

Nonmanufacturing Industries

DATA concerning wage-rate changes occurring between January 15, 1933, and February 15, 1933, in 14 groups of nonmanufacturing industries are presented in the following table.

No changes in wage rates were reported in the anthracite mining group. In the remaining 13 groups decreases in wage rates were reported over the month interval. The average percents of decrease in rates reported in each of the several groups were as follows: Hotels, 5.8 percent; power and light, 7.3 percent; electric railroad and motor-bus operation, 7.7 percent; metalliferous mining, 8 percent; quarrying and nonmetallic mining, 8.1 percent; canning and preserving, 8.8 percent; laundries, 9.9 percent; telephone and telegraph, 10 percent; dyeing and cleaning, 10.7 percent; wholesale trade, 11.7 percent; retail trade, 11.9 percent; bituminous-coal mining, 13.2 percent and crude-petroleum producing, 17.5 percent.

TABLE 2.—WAGE CHANGES IN **NONMANUFACTURING** INDUSTRIES DURING MONTH ENDING FEBRUARY 15, 1933

Industrial group	Estab- lish- ments report- ing	Total number of em- ployees	Number of establish- ments reporting—			Number of employees having—

Wage Changes Reported by Trade-Unions and Municipalities Since December, 1932

WAGE and hour changes occurring in trade-union agreements and reduced rates adopted by municipalities which were reported to the bureau during the past month are shown in the table following. The tabulation covers a total of 35,558 workers, of whom 472 were reported to have gone on the 5-day week.

RECENT WAGE CHANGES, BY INDUSTRY, OCCUPATION, AND LOCALITY,
DECEMBER, 1932, TO MARCH, 1933

Industry or occupation and locality	Date of change	Rate of wages		Hours per week

¹ Not reported.⁴ 10 per cent reduction.⁸ Average.⁶ Estimated.⁷ See text following.⁸ 15 per cent reduction.

The reductions in the compensation of New York City government employees effective January 1, 1933, are as follows:

Group 1. Officers or persons receiving a rate of compensation of \$2,000 a year, but not exceeding \$3,000—6 per cent of the compensation not in excess of \$2,000; 7 per cent of the compensation in excess of \$2,000, but not in excess of \$3,000.

Group 2. Officers or persons receiving a rate of compensation of \$3,000 a year, but not in excess of \$4,000—The same reduction as officers or persons in Group 1 and in addition 8 per cent of the compensation in excess of \$3,000, but not in excess of \$4,000.

Group 3. Officers or persons receiving a rate of compensation of \$4,000 a year, but not in excess of \$5,000—The same reduction as officers or persons in Group 2 and in addition 9 per cent of the compensation in excess of \$4,000, but not in excess of \$5,000.

Group 4. Officers or persons receiving a compensation of \$5,000 a year, but not in excess of \$10,000—The same reduction as officers or persons in Group 3 and in addition 10 per cent of the compensation in excess of \$5,000, but not in excess of \$10,000.

Group 5. Officers or persons receiving a compensation of \$10,000 a year, but not in excess of \$15,000—The same reduction as officers or persons in Group 4 and in addition 15 per cent of the compensation in excess of \$10,000, but not in excess of \$15,000.

Group 6. Officers or persons receiving a compensation in excess of \$15,000—The same reduction as officers or persons in Group 5 and in addition 33¹/₁₀ per cent of the compensation in excess of \$15,000. Provided that in making such reductions, the compensation of an officer or person shall not be reduced in such a manner that his compensation for the year 1933 shall be less than \$2,000 and provided further that if the above reductions result in a rate of compensation for the year 1933 which is not a direct multiple of \$5, then the rate of compensation shall be fixed at the next lower direct multiple of \$5.

[illegible]

General Trend of Wages in Great Britain Since 1924¹

WAGE rates in Great Britain have shown a marked rigidity during the period of falling prices since 1924. The Ministry of Labor's index of wage rates, based on 1924 as 100, had fallen only to 97 by the third quarter of 1931, while the cost of living index had fallen to 83.1 and wholesale prices (Board of Trade's index) to 60.3 during the same period. After the suspension of the gold standard on September 21, 1931, when a rise in sterling prices and in the cost of living was widely expected, the former appears merely to have been arrested in its fall, while the latter continued downward. The index of wage rates dropped from 97 for the third quarter of 1931 to 96 in the first quarter of 1932, and has remained at 96 up to the present.

If, however, from the international point of view the fall in the value of the pound sterling is taken into account, there has been a sharp drop in the general level of wages in Great Britain, as compared with countries remaining on the gold standard.

On the other hand, from the point of view of the worker, the rates of wages which he receives have dropped only very slightly, and because of the continued fall in the cost of living his real wages have actually increased. This is shown in the following table:

TABLE 1.—INDEX NUMBERS OF WEEKLY WAGE RATES, REAL WAGES, COST OF LIVING, AND WHOLESALE PRICES IN THE UNITED KINGDOM, 1924 TO 1932

[Average 1924 = 100.0]

Period	Rates of wages	Real wages	Cost of living	Wholesale prices
Third quarter of—				
1924.....	100.5	102.2	98.3	99.3
1925.....	102.0	102.6	99.4	93.9
1926.....	101.5	103.7	97.9	90.2
1927.....	101.0	106.9	94.5	85.3
1928.....	100.0	105.8	94.5	83.8
1929.....	99.5	106.5	93.4	82.1
1930.....	99.0	110.6	89.5	70.7
1931.....	97.0	116.7	83.1	60.3
1932.....	96.0	118.5	81.0	60.0

It should not be forgotten that the advantageous position shown above is true only for the fortunate worker who is employed full time. From the point of view of actual earnings, account should be taken of the amount of short time, to say nothing of the average spell of unemployment during the year. For this reason figures are given in the following pages of actual earnings, when they are available, as well as of wage rates.

Important Recent Changes in Wage Rates

Sliding Scale Rates

THE majority of changes in wage rates which have occurred since 1929 have been in trades for which there are agreements of sliding scale rates based on changes in the cost of living, or on changes in the selling prices of the products of the industry. The more important industries covered by the first type of sliding scale arrangements are building, silk manufacture, furniture trades, paper making, textile

¹ This report was prepared, late in 1932, by K. A. H. Egerton, of the American consulate general, London, with the assistance of the United States consuls at Belfast, Birmingham, Bradford, Cardiff, and Manchester.

bleaching, dyeing and finishing, and calico printing. Sliding-scale rates based on selling prices are operative in some of the metal and engineering industries. Since 1929 all of these have tended to show a downward movement, as the cost of living has fallen almost steadily throughout 1930, 1931, and 1932, while selling prices have slumped heavily throughout the period.

Important New Wage Agreements

Important changes in wage agreements during the period since 1929 have occurred in the cotton and wool textile industries, and in the pottery industry. There was a reduction of about 10 per cent in the wages of operatives in the wool textile industry in 1930, and a further reduction of 11.5 per cent in 1931; a drop of about 8.5 per cent and 7.75 per cent in the wages of cotton weavers and spinners, respectively, in 1932, and a reduction of 10 per cent in the wages of pottery workers in 1931. Wage reductions were not very important in 1930, but in 1931 engineers, shipbuilders, linen workers, boot and shoe operatives, and coal miners in two districts, namely, Scotland and South Wales, were all affected by wage rate reductions.

While the above-mentioned industries do not constitute by any means a complete list, they are the more important trades in which wage rates have recently been reduced.

Actual Earnings as Affected by Short Time

APART from reductions in wage rates since 1929, the increased use of short time worked in many factories, mines, and other establishments has had a marked effect on the actual earnings of wage earners. This is shown specifically in the case of coal mining and some other industries in the pages which follow. It would be impossible, however, to estimate the average reduction in earnings of workers employed resulting from short time since the onset of the acute depression which began in the autumn of 1929. It has been estimated wherever possible in this report, but figures are available in only a limited number of industries.

Factors Affecting Cash Value of Wages

A NUMBER of factors may make the worker's cash earnings either greater or less than the nominal wage rate, such items as payment for overtime, allowances in kind, paid holidays, and the like adding to his returns, while wage taxes, deductions for insurance, and so on, would decrease his receipts. Overtime rates, allowances and holidays, have in general been dealt with in the preceding pages under the particular trades affected. Wage taxes are unknown in Great Britain, apart from the general income tax, which, owing to the provisions for exemption, affects only a small proportion of the wage earners. Insurance deductions, however, form an appreciable item in the worker's calculations.

Insurance Contributions

The workers' nominal wages are diminished by weekly contributions to the national unemployment insurance scheme, the health insurance scheme, and the widows' and old-age pension schemes. Agricultural workers, domestic servants, most railway employees, and employees of local Government authorities are not covered by the unemployment insurance scheme, but for other workers the employer

deducts the weekly contribution from the wage before paying it over. He also makes, on his own account, a contribution of the same or slightly larger amount, which from his point of view may be regarded as an addition to the wage. Table 2 shows the weekly contribution made by the employer and the employee to these three schemes, but does not include the amount contributed by the Government, which bears a part of the cost.

It will be seen that each normal male worker between 21 and 65 years of age contributes 19d. (1s. 7d. [at par, 38.5 cents; at exchange rate, 26.0 cents])² weekly for insurance purposes, and that his employer contributes the same amount, making a total of 38d. (3s. 2d. [at par, 77.1 cents; at exchange rate, 51.9 cents]) paid in weekly to the insurance funds so long as the man is at work. For workers in other categories the totals contributed are smaller, as shown in the above table.

Minimum Rates of Wages

THE most general information on wages in Great Britain is found in the tables published by the Ministry of Labor in the Twentieth Abstract of Labor Statistics. These have been revised making the figures as of September 30, 1932, and from them Tables 3 and

² At par shilling=24.33 cents, penny=2.03 cents; at average exchange rate for December, 1932, shilling=16.4 cents, penny=1.37 cents.

4 have been prepared, giving the minimum time rates of wages per week, per day, or per hour. These minima have been determined by agreements between organizations of employers and workers; by arbitration awards, or, in the absence of such agreements or awards, by certain trade-unions which have recognized these rates as the minima for their members.

TABLE 3.—MINIMUM WEEKLY RATES OF WAGES AND HOURS OF LABOR IN LONDON AND GLASGOW IN SPECIFIED OCCUPATIONS, SEPTEMBER 30, 1932

[Except where otherwise indicated rates and hours are those recognized by employers' associations and trade-unions concerned. ¹ Per hour.

² London, 45.

³ For day workers; shift workers, 44.

⁴ The rates quoted apply to members of the London Master Bakers' and Confectioners' Protective Society; the rates applicable to cooperative societies and certain firms are 5s. higher.

⁵ The rate quoted for Glasgow is payable for a week of 42 hours. A rate 5s. higher is payable when the hours are over 42 and up to 48.

⁶ Per hour. For an area within 12 miles radius of Charing Cross. For the area between 12 and 15 miles radius from Charing Cross the rate is ½d. per hour less, except that the rate usually paid to plasterers is 20½d.

⁷ Per hour. Plasterers, 19½d. and bricklayers 19d. per hour.

⁸ 46½ during the period of statutory summer time.

⁹ The lower rates given are the starting rates, the higher those payable after a certain length of service.

³ Where the mileage during any turn of duty worked on the mileage basis exceeds 140 miles, extra payment is made.

Trade Board Wage Rates

In a number of the minor industries and trades, such as the preparation of aerated waters, chain making, the manufacture of brushes and brooms, the hat, cap, and millinery trades, and so on, minimum rates of wages are fixed for adult male and female workers by trades boards, and in these rates there have been few changes since 1929.

Wage Rates and Earnings in Certain Important Industries

WHILE the foregoing tables give minimum wage rates in a number of industries, they do not show actual earnings. An attempt has been made, therefore, to obtain information for a number of important industries in greater detail, and where possible to secure also figures of actual earnings, taking into account short time. Where this has not been possible, figures of actual full-time rates have been sought. These details have been furnished largely by American consular officers in the United Kingdom, and are given below.

Coal Mining

Hours of work.—Hours of work underground were fixed by the coal mines act of 1930 at seven and one-half per shift, with a proviso for the so-called "spread over," under which a different arrangement of hours might be made provided the working time did not exceed 90 hours in a fortnight. This act was due to expire July 8, 1931, but before that date the coal mines act of 1931 was passed, which continued in effect the 7½-hour shift, but no longer permitted the spread over. (See Monthly Labor Review, September, 1930, p. 200.) A "shift" is

defined as the period between the time at which the last man in the shift leaves the surface, and the time when the first man up reaches the surface.

Wages.—Wages are calculated by a highly complicated system. The coal fields are divided into eight districts, and each of these has its own basic rate. This is modified by various percentage and flat-rate additions, which differ from district to district, and are based on selling price, cost of living, etc. In addition, there is a minimum or subsistence wage, fixed by the day or by the shift, below which wages may not fall.

Holidays.—District agreements between employers and trade-unions provide for holidays of from 1 week to 10 days for certain specified types of workers in the coal industry, such as firemen, examiners, overmen, etc.

Overtime pay and allowances.—In the coal industry overtime is paid at one and one-third times the ordinary rate. By long-standing custom, various allowances in kind are also made to miners; these vary from field to field and are not reckoned in as part of the wage rate.

Actual average earnings.—Reports published periodically by the mines department are the source of information as to wages and earnings, and this is usually given in two forms—wages per ton of commercially disposable coal, and earnings per man-shift worked.

Table 5 shows these data, and also the average actual weekly earnings for the quarter ended June 30, 1932, together with the estimated average cash value of allowances in kind in each district in Great Britain, and the average number of shifts worked per week per worker:

TABLE 5.—WAGES IN COAL MINING IN GREAT BRITAIN, IN THE QUARTER ENDING JUNE 30, 1932

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Great Britain.....	9 1½	4.53	41 6	1 9	9 2	2.23	1.50

Changes in wages.—Table 6 shows that there has been very little change in earnings in the coal-mining industry since the middle of 1930, but a considerable drop since 1925. It also shows that the wages earned depend largely on the average number of shifts worked per

week per man, which vary as between the summer and winter quarters, and that the average number of shifts has not been over 4.86 per week since 1929. If the industry were working at full time throughout and the average number of shifts worked were, say, 5.75 per week per man, the average weekly earnings in the second quarter of 1932 would have been 52s. 8d. instead of 41s. 6d.

² Excluding subvention.

Iron and Steel Industry

Hours of labor.—In general, the 8-hour day prevails throughout the trades and occupations grouped under this heading. At the time these figures were taken (the fall of 1932) blast-furnace employees, if on full time, were working eight hours a day and seven days a week.

Wage rates.—Throughout the whole of the pig-iron, wrought-iron, heavy-steel, and tin-plate trades, and the tube trade of Scotland, wage rates are adjusted by means of sliding scales based upon the selling price of the principal products of the industry concerned. A periodical survey of these prices is made for the purpose of determining what changes, if any, should be made in the wage rates. Taking the wage level of 1926 as a standard, one large firm gives the following estimate of the relative position during the four years ending December 30, 1932:

1926.....	100
1929.....	99
1930.....	99
1931.....	96
1932.....	96

Table 7, based on the experience of a limited number of firms, indicates the approximate rates paid in various departments of the iron and steel industry in 1931.

Overtime.—The rate paid for overtime to day workers is time and a quarter for the first two hours and time and a half thereafter.

General trend of average earnings.—The National Federation of Iron and Steel Manufacturers obtains data from its members (who include the great majority of the principal firms in the industry) showing the average weekly earnings of their workers. The returns do not provide separate particulars as to earnings of different classes of workers employed. The figures are greatly affected by the fact that much short time has been worked during the past few years. The following figures of the average earnings for all workers shows the general trend in average actual earnings in the industry over the past four years:

TABLE 8.—AVERAGE ACTUAL WEEKLY EARNINGS OF WORKERS IN IRON AND STEEL MANUFACTURE AT SPECIFIED DATES

Textile Industries

Cotton Textiles

Method of fixing wages.—According to the Cotton Yearbook (Manchester) "the system of paying wages in the cotton industry is unique. All wages for spinning yarn and manufacturing cloth are paid according to the amount of production. The elaborate piece price lists which are now in existence have been handed down from generation to generation, probably from the time before the factory system came into being." It is estimated that 85 to 90 per cent of the total number of operatives in the cotton industry are paid on a "piece rate" basis.

Average earnings in 1924.—At the present time wages vary widely and generalizations as to averages are difficult and should be used cautiously. Following an official inquiry in 1924, it was stated that the average earnings in the cotton industry as a whole amounted to 10 pence (at par, 20 cents; at exchange rate, 14 cents) per hour, but included in this figure were the wages of both juvenile and the higher paid operatives, the former earning from 12 to 15 shillings and the latter from 75 to 90 shillings per week.

Important changes in 1932.—During the year 1932, both the spinning and weaving sections of the cotton industry have been involved in wage disputes of a serious character. The initiative was taken by the manufacturing section and, following a sectional strike in the Burnley area, one involving the whole of Lancashire was called by the operatives' unions as a protest against a wage reduction of 12½ per cent (actual) proposed by the employers. Following Government intervention through the Ministry of Labor, a new agreement, known as the "Midland," was drawn up on September 27, 1932. Since this date a somewhat similar agreement has been adopted in the spinning section. In the Midland agreement the former separate arrangements on wages in different sections of the weaving industry have been eliminated, and a further satisfactory feature is that, in addition to joint rules for the settlement of disputes, effective safeguards against a stoppage of work during periods of negotiations have been provided.

In reaching the settlement, the weaving section employees agreed that their wages should be reduced by 15½ per cent of the standard piece-price list, which was equivalent to 8.493 per cent off former wages, while the spinners accepted a reduction of 14 per cent on the standard list, equivalent to an actual reduction of 7.67 per cent.

The percentage addition on the standard piece-price list in 1906 was 5 per cent, while in the weaving section payment was made at list rates. In 1913 all sections were on a basis of 5 per cent above the list. During 1916 and 1917 all sections were advanced 35 per cent; during June, 1918, there was a further advance of 25 per cent; and in December, 1918, a Government board of arbitration granted an additional 50 per cent advance. To cover the reduction in earnings on account of the working week being changed from 55½ to 48 hours in June, 1919, a 30 per cent increase was sanctioned. After a further increase of 70 per cent in 1920, all piece-rate wages in the industry stood at 215 per cent above the standard lists. Then began a reaction. Between June, 1921, and October, 1922, there occurred cuts in the percentage of list rates aggregating 120 per cent,

and after a lengthy struggle a further cut of $12\frac{1}{2}$ per cent was accepted by the trade-unions, leaving the rate at $82\frac{1}{2}$ per cent above the standard lists.

As a result of the 1932 disputes, the spinning and weaving employees separately agreed with their employers, the former accepting 14 per cent and the latter $15\frac{1}{2}$ per cent reductions, leaving the present rates at 67 and $68\frac{1}{2}$ per cent, respectively.

More looms per weaver agreement.—The foregoing brief outline will serve to illustrate the difficulty in computing wages in the British cotton industry, and, with the ratification of the "more-looms agreement" which was concluded on December 28, 1932, to become effective January 2, 1933, determination of the wages of those affected becomes even more complicated.

The principal feature of this latest agreement is a provision that the standard shall be 36-inch cloth, 60 ends per inch woven in a 60 reed 26s weft and fine counts, on a wage basis of $17\frac{1}{2}$ pence (at par, 4 cents; at exchange rate, 3 cents) per 100,000 picks, each weaver taking care of 6 looms. For other widths, types of cloth, etc., percentage additions or deductions are to be made from the standard. Provision is made for temporary experiments upon payment of a weekly wage of 45 shillings, or 10 per cent more than the average earnings when working four looms, whichever is higher. The fall-back or part-time wage is fixed at $66\frac{2}{3}$ per cent, or 28 shillings per week, whichever is higher, but the employer retains the right to remove warps or play off a weaver when 50 per cent of the usual number of looms are idle.

Average earnings in autumn of 1932.—In 1906 there was held an official inquiry into the actual earnings of cotton operatives, which were subsequently published in tabular form. This table has never been officially revised, and it was then stated that there was often a great difference in the amount earned by one operative and another, even when employed at similar work in the same mill. Since there is no other available basis of estimation, the table published in 1906 must be used and amended in accordance with the percentage changes in average earnings since that time. The changes which have occurred are shown herewith:

TABLE 10.—PERCENTAGE CHANGES IN AVERAGE EARNINGS IN THE COTTON INDUSTRY, 1906 TO 1932

Date	Assuming standard list to be 100	Per cent of actual earnings	Assum- ing actual earnings to be 100
1906	105		100.0
June, 1907	Add 5	4.8	4.8
	110		104.8
March, 1909	Deduct 5	4.5	4.1
	105		100.7
June, 1915	Add 5	4.8	4.8
	110		105.5
June, 1916	Add 5	4.5	4.7
	115		110.2
February, 1917	Add 10	8.7	9.6
	125		119.8
December, 1917	Add 15	12.0	14.4
	140		134.2
June, 1918	Add 25	17.9	24.0
	165		158.2
December, 1918	Add 50	30.3	47.9
	215		206.1
July, 1919	Add 30	13.9	(¹)
	245		206.1
May, 1920	Add 70	28.6	58.9
	315		265.0
June, 1921	Deduct 60	19.0	50.4
	255		214.6
December, 1921	Deduct 10	3.9	8.4
	245		206.2
April, 1922	Deduct 40	12.2	25.2
	205		181.0
November, 1922	Deduct 10	4.9	8.9
	195		172.1
August, 1929	Deduct 12½	6.4	11.0
	182½		161.1
October, 1932	Deduct 14	7.7	12.4
	168½		148.7

¹ No addition is here made, inasmuch as the increase on the standard list of 30 points, equivalent to 13.9 per cent on actual earnings, was granted to compensate for the reduction which would otherwise have resulted from the decrease of weekly hours of labor (piece rates) from 55½ to 48 hours.

Since it appears that average earnings have increased 48.7 per cent, the 1906 table with the individual figures increased by this percentage will give approximately the present average weekly earnings. Table 11 gives these earnings (calculated to the nearest shilling) for the localities specified:

The foregoing table should be considered only in the broadest sense as a general indication of present earnings, because in many cases the individual figures shown probably differ from the actual amounts received by the workers.

Hours of labor.—During May and June, 1919, an agreement was reached between the operatives and employers whereby the hours per week were reduced from 55½ to 48 and, as previously mentioned, an increase of 30 per cent on list rates was granted to cover what otherwise would have resulted in a reduction of wages. The 48-hour week has continued and was confirmed in the agreements reached during September and October, 1932.

Average earnings, 1929 to 1932.—Much short time has prevailed in the industry over the past few years. For a week ending approximately on October 22, in each of the last four years, the percentage of workers on short time, and the average hours lost by each, were as follows:

TABLE 12.—PER CENT OF WORKERS ON SHORT TIME AND THE AVERAGE HOURS LOST PER WEEK IN THE COTTON INDUSTRY, 1929 TO 1932

Year	Per cent on short time	Average hours lost
1929.....	11.0	13½
1930.....	27.0	16
1931.....	12.0	15½
1932.....	9.5	17

The actual earnings of the workers were considerably influenced by this prevalence of short time, as appears in Table 13, compiled from data published in the Labor Gazette:

Wool Textiles

Agreement of August, 1919.—At the present time there is no agreed scale of wages in the wool textile industry. The last wages agreement was made in August, 1919, and operated until October, 1927, when

the employers gave notice for its termination, as they desired to negotiate a reduction in the rates of payment. Negotiations for a new agreement continued for more than two years, during which period wage rates were unaltered. As the deliberations between the two sides showed no signs of resulting in an agreement, a few leading employers in the early part of 1929 enforced reductions of about 10 per cent on their own responsibility, but the majority continued to negotiate and pay the old rates of wages. The dispute was referred to a court of inquiry in January, 1930, which, two months later, recommended that the wages of timeworkers be reduced by 9.249 per cent, and of pieceworkers by 8.766 per cent. The employers offered to make an agreement with the trade-unions on the basis of those terms, but the workers were unwilling to accept them and in some districts a strike occurred. Ultimately the reductions were enforced in the majority of the mills, except those which had already imposed the 10 per cent reduction and a few where lesser reductions were effected.

Reductions in 1931.—In July, 1931, the employers decided to enforce a further reduction of 11.7 per cent and refused to discuss the matter with the trade-unions, reserving to themselves full liberty of action to make individual contracts of employment with their workers. There was some resistance on the part of the workers, but eventually employment was resumed in most of the mills on the new wage rates proposed by the employers. In a few instances this second reduction was not enforced and in some others only part of the 11.7 per cent cut was imposed, with the result that different scales were operating for the same class of work in various towns. However, some of the latter firms have since adopted the 11.7 per cent reduction.

In the absence of an agreement in the industry there is no official scale of wages, but it is generally recognized that the prevailing unofficial rates to which most employers adhere are those set out in the 1919 agreement, less approximately 20 per cent. Time rates are the basis on which all wages are calculated. The general time rate now is the basic rate, plus 5 per cent, plus 52 per cent cost-of-living increase. Pieceworkers are paid 88 per cent of timeworkers' cost-of-living increase, so that piecework rates are the basic rate, plus 5 per cent, plus 45.76 per cent.

Overtime.—The rates paid for overtime are one and one-fourth times the ordinary rates for the first two hours and one and one-half times thereafter.

Present wage rates.—The rates now being paid in the industry, as well as the basic rates, are shown in Table 14:

TABLE 14.—BASIC AND PRESENT WEEKLY WAGE RATES IN THE WOOL TEXTILE INDUSTRY

Holidays.—In the lambs' wool and worsted yarn spinning trades at Leicester, equal contributions are paid by employers and workers for 48 weeks in the year toward a holiday fund, the contributions being 6d. (at par, 12 cents; at exchange rate, 8 cents) for males 18 years of age and over, and smaller amounts for women and juveniles. Payment from the fund is made not later than the day following resumption of work after the August bank holiday (the first Monday in August).

Actual average earnings.—The actual earnings of operatives in the wool textile industries are affected by the amount of short time or overtime worked. Tables 15 and 16, compiled from figures given in the Labor Gazette, show the numbers employed, the percentage working short time or overtime, the average number of hours of lost time or of overtime, and the average actual earnings of workers in the different sections and occupations specified for corresponding weeks in 1931 and 1932:

¹ Unusual amount of short time during this particular week.

Silk

Wages paid in the silk industry are those fixed by agreement between the employers' associations and the trade-unions, and differ in the two centers of the industry—Macclesfield and Leek.³

At Leek woman timeworkers aged 21 years and over are paid 28 shillings (at par, \$6.81; exchange rate, \$4.59) a week. The majority of woman workers in Leek are pieceworkers and their rates are fixed at a figure to yield the average worker at least about 20 per cent above a time rate of 27 shillings (at par, \$6.57; at exchange rate, \$4.43) per week. At Macclesfield women are far more generally employed as time workers.

Table 18 shows the weekly time rates for men at Leek and for men and women at Macclesfield. Unless otherwise specified, the rates given for men at Leek are for workers 22 years of age and over, and are those fixed by an agreement effective December, 1930, which is subject to sliding-scale changes with the cost of living, under which there were reductions in the summer of 1932 of from 1 to 3 shillings 6 pence, according to the grade of worker.

³ Some silk textiles are made in Bradford and Leeds, the center of wool textile manufacture, the wages there being those paid to wool textile workers in the district.

¹ Per hour, plus 70 per cent.

Overtime.—Overtime is paid at time and a quarter until 8 p. m., after which it is paid at time and a half.

Bleaching, Dyeing, and Finishing

Hours of labor.—The hours of labor in a full week are 48, except for night workers in Lancashire, Cheshire, and Derbyshire, for whom they are 43 $\frac{3}{4}$.

Wages.—Time wages are calculated differently in the various districts. In some there is a basic rate, to which is added a cost-of-living percentage, varying as the index figure published by the Ministry of Labor rises or falls, while in others there is a flat minimum rate. Piece rates are fixed in relation to time rates, and a common arrangement is that they shall be such as to yield at least 25 per cent in excess of the basic time rate before the cost-of-living rate is added; in Yorkshire it is also provided that employees engaged on night work shall receive 2 shillings 6 pence per night extra.

The following are the rates prevailing in the districts and for the classes named, revised to November, 1932. In Yorkshire, area A is the district covered by the Bradford Dyers' Association, and area B is that covered by other employers' associations.

TABLE 19.—WEEKLY WAGE RATES IN THE TEXTILE BLEACHING, DYEING, AND FINISHING TRADES, NOVEMBER, 1932

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Women, 21 years and over.....	15 0	7 9	22 9	5.54		3.73

¹ Plus 8 per cent.

Overtime.—Overtime is usually paid at time and a quarter for the first two hours and time and a half thereafter to timeworkers; to pieceworkers, 3d. or 4 $\frac{1}{2}$ d. (at par, 6 or 9 cents; at exchange rate for December, 1932, 4 or 6 cents) per hour extra is paid for all overtime, unless it falls between 6 p. m. and 6 a. m., when 9d. per hour is paid.

Calico Print Works

Wages are made up of a minimum weekly rate, plus a cost-of-living addition. Table 20 shows these two factors for engravers, and the total weekly wage, as of November, 1932. In Scotland the basic rate is nominally 1s. a week less than the figures given in this table.

TABLE 20.—WEEKLY WAGE RATES FOR ENGRAVERS IN CALICO PRINT WORKS, NOVEMBER, 1932

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Linen (Northern Ireland)

The manufacture of linen, with its allied trades, is an important industry in Northern Ireland, where it normally gives employment to about 85,000 workers or, roughly, 34 per cent of the total number of workers registered in Northern Ireland under the unemployment insurance acts. Hours and minimum wage rates are set by the linen trade board.

Hours of labor.—At the close of 1932 the normal working week consisted of 47 hours, the normal hours for Saturday being 4½ and for other week days 8½. Hours in excess of these and all hours worked on Sunday or on any recognized public holiday are classed as overtime, and must be paid for at extra rates.

Wage rates.—For the purpose of fixing wage rates, Northern Ireland is regarded as consisting of two districts—the first comprising the county borough of Belfast and regions not more than 30 miles by rail from Belfast, while the second comprises all other regions. Table 21 shows the minimum time rates per hour for each district separately. The rates given for lappers, measurers, and sample makers are for workers who have served an apprenticeship of five years.

TABLE 21.—MINIMUM HOURLY WAGE RATES OF MALE WORKERS IN THE LINEN INDUSTRY OF NORTHERN IRELAND, 1932

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Second 6 months.....	0 6	12	8	0 6	12	8		
Third 6 months.....	0 10	20	14	0 10	20	14		

For male timeworkers other than those shown in the table, minimum hourly rates range in Belfast from 2 $\frac{5}{8}$ d. (at par 5 cents; at exchange rate, 4 cents) for workers under 15 with no experience to 9 $\frac{3}{4}$ d. (at par 20 cents; at exchange rate 13 cents) for those aged 21 and over with at least two years' experience in the trade within the last five years; in other localities the range is from 2d to 9d. with the same qualifications.

Basic piece rates.—For male pieceworkers other than lappers, measurers, sample makers, and machine operators in the Swiss embroidery branch the basic hourly rate is 10 $\frac{1}{4}$ d. (at par, 21 cents; at exchange rate, 14 cents) in the Belfast district and 9 $\frac{1}{2}$ d. (at par, 19 cents; at exchange rate, 13 cents) elsewhere. For machine operators in the Swiss embroidery branch the rate both in Belfast and elsewhere is 10 $\frac{1}{2}$ d. per hour (at par, 21 cents; at exchange rate, 14 cents) on 4 $\frac{3}{4}$ -yard, 3-tier, and 6 $\frac{3}{4}$ -yard machines; 11 $\frac{1}{2}$ d. (at par, 23 cents; at exchange rate, 16 cents) on 4 $\frac{3}{4}$ -yard, 4-tier machines; and 1s. 0 $\frac{1}{2}$ d. (at par, 25 cents; at exchange rate, 17 cents) on two 4 $\frac{3}{4}$ -yard, 2-tier machines, coupled.

For female workers aged 18 years and over, the minimum time rate is 6d. (at par, 12 cents; at exchange rate, 8 cents) per hour, unless the worker is classed as a learner, in which case she receives 2 $\frac{3}{4}$ d. for the first three months, 3 $\frac{1}{2}$ d. for the second, 4 $\frac{3}{8}$ d. for the third, and 5d. for the fourth. Learners under 18 receive an initial hourly rate based on their age at entrance with an increase for each 6 months of employment until they reach 18 and the 6d. an hour rate. Female workers under 18 who are not learners are paid in the same way, but their initial rate is slightly higher than in the case of learners. The piecework basic rate for female workers, other than home workers, is 6 $\frac{1}{2}$ d. (at par, 13 cents; at exchange rate, 9 cents) an hour.

Overtime rates.—The general overtime rate is time and a half, but for any time worked on Sundays or publicly recognized holidays double time must be paid. The general overtime rates are payable on any day (other than Sunday or a publicly recognized holiday)

when the number of hours worked exceeds $8\frac{1}{2}$, or, in the case of Saturday, $4\frac{1}{2}$, even though the number of hours worked in the week does not exceed 47. Piece workers receive a proportionate addition to their basic rates for all overtime worked.

Rope and Twine

Beginning at $2\frac{1}{2}$ d. per hour for boys under 15, time rates for male workers rise gradually, reaching their maximum when the worker attains the age of 21. For those under 18, rates are uniform regardless of occupation, but from 18 onward there are variations according to the work done. Table 22 shows the hourly time and piece rates for male workers in the Belfast district; in other localities the rates are uniformly $\frac{1}{2}$ d. lower.

TABLE 22.—HOURLY WAGE RATES OF MALE WORKERS IN THE ROPE AND TWINE INDUSTRY OF NORTHERN IRELAND

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December 1932, of shilling=16.4 cents, penny=1.37 cents]

All other male workers.....	$8\frac{1}{2}$	17	12	$9\frac{1}{2}$	19	13

For female workers aged 18 and over, the time rates per hour in the Belfast district range from $4\frac{1}{4}$ d. (at par, 9 cents; at exchange rate, 6 cents) for doffers and 5 d. for layers to $6\frac{1}{4}$ d. for reelers and warpers, and $6\frac{1}{2}$ d. (at par, 13 cents; at exchange rate, 9 cents) for sample makers, house-machine minders, and net-making machine operators. The most diversified group of workers, including ballers, carders, sop winders, drawers, etc., are paid 6 d. (at par, 12 cents; at exchange rates 8 cents) per hour. Piecework basic time rates are a halfpenny per hour higher than the straight time rates. In localities other than the Belfast district both time and piece work basic rates are uniformly a halfpenny per hour lower than in the Belfast district.

Boot and Shoe Industry

Recognized time rates.—Both employers and employees in the boot and shoe industry are strongly federated, and wages are determined by joint agreement. For time workers wages vary according to sex and age, men reaching the standard adult rate at 22 years and women at 20 years. The recognized rates, up to and including these ages, are as follows:

TABLE 23.—WEEKLY WAGE RATES IN THE BOOT AND SHOE INDUSTRY OF GREAT BRITAIN, 1932, BY AGE AND SEX

Piecework earnings.—Piece rates are fixed at a figure intended to secure to the average worker earnings at least 25 per cent above the minimum time rates. Data were obtained showing the actual earnings of pieceworkers in a representative East Midlands factory during a standard week of 48 hours, late in 1931, and the range of these earnings is given in Table 24:

TABLE 24.—HIGHEST AND LOWEST EARNINGS OF MALE PIECEWORKERS, BY OCCUPATION, IN REPRESENTATIVE BRITISH SHOE FACTORY, WEEK ENDING SEPTEMBER 30, 1931

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Edge setting.....	112 6	27.37	18.45	99 9	24.27	16.36

In addition to the above there were four operations performed by male workers for which only one figure showing earnings could be obtained. Weekly earnings for these operations were as given in Table 25.

TABLE 25.—EARNINGS IN FOUR SPECIFIED OCCUPATIONS IN A BRITISH SHOE FACTORY, WEEK ENDING SEPTEMBER, 30, 1931

[Conversions into United States currency on basis of par value of shilling=24.33 cents, penny=2.03 cents; average exchange rate for December, 1932, of shilling=16.4 cents, penny=1.37 cents]

Hours, overtime rates, and holidays.—The standard hours are 48 a week. Overtime is paid for at time and a quarter. Employers and workers make equal contributions to a holiday fund, the amount being 1s. 2d. (at par, 28.4 cents; at exchange rate, 19.1 cents) in the case of adult men, with smaller amounts for women and juveniles. Withdrawal of small fixed amounts are made for the Easter and Whitsun holidays, and larger amounts for the longer holidays taken in August and at Christmas.

Changes in average earnings.—Changes in the number employed and in the average earnings per worker for a week ending approximately October 22d in each of the last four years are shown in Table 27:

TABLE 27.—NUMBERS EMPLOYED AND AVERAGE EARNINGS IN THE BOOT AND SHOE INDUSTRY OF GREAT BRITAIN DURING SPECIFIED WEEK

Pottery Industry

Hours of labor.—In general, the hours of labor in a standard week in the pottery industry are 47, exclusive of mealtimes and overtime. For enginemen and stokers, wage rates are based on a week of 48 hours, and are subject to reduction when the hours in any week are less than 48.

Wages.—The British pottery industry employs more than 70,000 workers, considerably over half of them being women and girls. To a large extent piece rates prevail, and though both workers and employers are strongly organized, these rates differ so materially from factory to factory, according to product and to methods employed, that it is practically impossible to secure any definite information as to the customary or average rates. In February, 1931, the associated manufacturers in the industry gave notice of their intention to change the agreements as to wages and trade usages so as to reduce wage rates. The operatives responded by a similar notice demanding an increase in rates and various changes in trade usages. After a bitter dispute, in which the parties were unable to come to an agreement, the matter was referred to arbitrators, who gave an award effective from the first settling day in May. By this the wages of all operatives in all sections of the industry were reduced 10 per cent, except that it was provided that the cut should not operate to bring the wages of certain classes below specified minimum figures. The classes affected by this proviso, and the minimum wage established for each, are shown in Table 28:

TABLE 28.—MINIMUM WEEKLY TIME RATES FOR SPECIFIED CLASSES OF BRITISH POTTERY WORKERS, AGED 21 YEARS AND OVER

Building Trades

Hours of labor.—The customary hours of labor in a full week, exclusive of mealtimes and overtime, are 46½ throughout the period during which the so-called statutory "summer time," or daylight saving time, is in force and 44 for the rest of the year. In a number of cases, however, the 44-hour week prevails throughout the entire year, and in a few towns special arrangements for other hours during the whole or part of the year have been made by agreement between employers and workers.

Wages.—Rates are established by the National Joint Council for the building industry, except in the case of Liverpool and Birkenhead, where local agreements prevail, and in a few towns where plasterers' rates have been fixed by special agreement between the unions and the master plasterers' association. For purposes of rate fixing, towns are divided into 10 grades, London being graded by itself apart from the other 10, and the rate paid depends upon the grade into which the town falls.

Table 31 gives the minimum hourly rates in London and certain English towns, and in Glasgow.

TABLE 31.—MINIMUM HOURLY WAGE RATES IN THE BUILDING TRADES, 1932¹

¹From International Labor Review, July, 1932, corrected for reduction in February, 1932.

Overtime.—Rates paid for overtime are one and one-fourth times the ordinary rates for the first two hours, one and one-half times for the third and fourth hour, and twice the ordinary rates for time over four hours.

Relative wage levels at end of 1931.—The method of obtaining these is explained by the Ministry of Labor as follows:

On the basis of the unweighted averages of the standard rates of wages in 39 of the largest towns, the average increases in hourly and weekly rates at the end of December, 1931, of the principal classes of adult workmen, were shown in the following table. The weekly rates shown have been computed by multiplying the hourly rates by the number of hours constituting a full ordinary week (averaging approximately 49¼ in 1914 and 44¼ at December, 1931), both the summer and winter hours being taken into account for this purpose.

Reduction in wage rates in 1932.—In publishing the above table, the Ministry of Labor calls attention to the fact that “in 35 of the 39 towns of which account has been taken in the compilation of these averages, rates of wages for building-trade operatives have been reduced as from February 1, 1932, by a halfpenny per hour for craftsmen and by a halfpenny or a farthing (generally a halfpenny) per hour for laborers.”

Engineering and Shipbuilding

Hours.—In general, the standard week consists of 47 hours, exclusive of overtime and mealtimes. Overtime on both the day and the night shifts is paid at time and a quarter for the first two hours, and at time and a half after that.

Relative level of wage rates 1914 and 1931.—The Ministry of Labor gives the following figures relating to wage rates in the trades grouped under this heading:

TABLE 33.—RELATIVE LEVELS OF WAGE RATES IN ENGINEERING AND SHIPBUILDING OCCUPATIONS IN GREAT BRITAIN, 1914 AND 1931

Occupation	Average (unweighted) of recognized weekly time rates in principal centers		Average per cent of increase, Aug. 4, 1914, to Dec. 31, 1931
	Aug. 4, 1914	Dec. 31, 1931	
Engineering:			
Fitters and turners.....	s. d. 38 11	s. d. 59 1	52
Iron molders.....	41 8	62 4	50
Pattern makers.....	42 1	63 4	51
Laborers.....	22 10	42 1	84
Shipbuilding:			
Shipwrights.....	41 4	59 9	45
Ship joiners.....	40 0	59 11	50
Laborers.....	22 10	40 10	79

Concerning these figures the following statement is made:

The above figures relate to a full ordinary week of 53 hours in some districts and 54 in others in 1914, and of 47 hours generally at December, 1931. The corresponding increase in hourly rates thus ranges from about 70 per cent for skilled workers to about 105 per cent for laborers in the engineering trade, and from about 65 to 70 per cent for skilled men to nearly 105 per cent for laborers in the shipbuilding trades.

In the case of pieceworkers the general advance over pre-war rates in the engineering industry amounts to 10 per cent on basic piece rates, plus a flat rate advance of 10 shillings a week. In the shipbuilding industry the general advance is 10 per cent on basic piece rates; at the end of December, 1931, a flat rate advance of 3 shillings and 6 pence per week, which has since been withdrawn, was also paid. In addition special advances have been granted to particular sections of workers.

Minimum time and piece rates.—Table 34, showing minimum hourly wage rates for timeworkers and minimum time rates for pieceworkers in mechanical engineering trades in certain selected cities, was given in the International Labor Review for July, 1932, and is based on comprehensive returns obtained from its members by the Engineering and Allied Employers National Federation:

TABLE 34.—MINIMUM HOURLY WAGE RATES IN THE ENGINEERING TRADES, OCTOBER, 1931

Agriculture

UNDER the agricultural wages (regulation) act of 1924, an agricultural wages board was established to fix minimum rates of wages for male and female adult workers (21 years of age and over, and 18 years of age and over, respectively) in England and Wales. No statutory minimum rates have been fixed for Scotland. Local bodies set wages for specified districts, which are usually, though not always, coterminous with counties, and should either side be dissatisfied with their decision an appeal may be made to the wages board. On June 1, 1932, the minimum weekly rates for adult men ranged from 30s. to 32s. 6d. (at par, \$7.30 to \$7.91; at exchange rate, \$4.92 to \$5.33) in 35 districts; in six districts they were below 30s., the lowest rate being 28s. in Suffolk and Oxfordshire, and in eight districts they were higher, the highest being 37s. 6d. in northern and eastern Lancashire. The usual rates for women were 5d. and 6d. (at par, 10 and 12 cents; at exchange rate, 7 and 8 cents) an hour, which apply in nearly all dis-

Agriculture

UNDER the agricultural wages (regulation) act of 1924, an agricultural wages board was established to fix minimum rates of wages for male and female adult workers (21 years of age and over, and 18 years of age and over, respectively) in England and Wales. No statutory minimum rates have been fixed for Scotland. Local bodies set wages for specified districts, which are usually, though not always, coterminous with counties, and should either side be dissatisfied with their decision an appeal may be made to the wages board. On June 1, 1932, the minimum weekly rates for adult men ranged from 30s. to 32s. 6d. (at par, \$7.30 to \$7.91; at exchange rate, \$4.92 to \$5.33) in 35 districts; in six districts they were below 30s., the lowest rate being 28s. in Suffolk and Oxfordshire, and in eight districts they were higher, the highest being 37s. 6d. in northern and eastern Lancashire. The usual rates for women were 5d. and 6d. (at par, 10 and 12 cents; at exchange rate, 7 and 8 cents) an hour, which apply in nearly all dis-

tricts. Normal hours range from 48 to 60 a week, the latter being found in the Lancashire districts where a relatively high minimum wage is in effect. The working week is often from two to four or five hours shorter in winter than in summer time.

Allowances in the way of housing, rent allowances, and foodstuffs are valued by the wages board or local committees, and their cash value may be deducted from the minimum rates established.

Actual earnings.—A report recently issued by the Ministry of Agriculture and Fisheries stated that particulars obtained from farms investigated by inspectors, though not necessarily representative of conditions generally prevailing, give an indication that earnings for the year ending September 30, 1931, average about 33s. 8d. (at par, \$8.20; at exchange rate, \$5.52) per week for ordinary workers; for horsemen, about 37s. 5d. (at par, \$9.10; at exchange rate, \$6.14); and for stockmen about 39s. 1d. (at par, \$9.51; at exchange rate, \$6.41). No later information is available. At that time there had been no material change in the average earnings as compared with the previous year.

Overtime and holidays.—Overtime rates of pay for agricultural workers vary in the different districts from 7½d. to 1s. (at par, 15 to 24 cents; at exchange rate, 10 to 16 cents) per hour. There are no provisions, legislative or by agreement, for holidays with pay. Individual instances are doubtless numerous, but do not represent the situation of the majority.

Wages and Hours of Labor in Canada, 1931 and 1932

THE following statistics are taken from a report on wages and hours of labor in Canada, 1930, 1931, and 1932, published as a supplement to the January, 1933, issue of the Canadian Labor Gazette (Ottawa):

TABLE 1.—INDEX NUMBERS OF RATES OF WAGES OF VARIOUS CLASSES OF LABOR IN CANADA, 1922 TO 1932

[1913=100]

¹ Maximum rates.² 1-man car operators, 5 cents extra per hour.³ 1-man car operators, 5½ cents extra per hour.⁴ 1-man car operators, 6 cents extra per hour.⁵ Including troublemen, and groundmen in some cases; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities.⁶ Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.⁷ Including armature winders, wiremen, etc.⁸ 1-man car operators, 5 cents extra per hour. Payment for actual time worked with a minimum of 8¼ hours per day instead of 9 hours as formerly, most runs being less than 9 hours, resulting in a 10 per cent reduction in earnings. In other classes daily earnings were reduced 10 per cent and hours to 8 per day.

Rates of wages paid to certain groups of railroad employees are shown in Table 3:

TABLE 3.—RATES OF WAGES OF CANADIAN STEAM-RAILROAD EMPLOYEES, 1927-1928 AND 1929-1932¹

¹ Some engineers, pumpmen, firemen, etc., work 7 days per week.

² In Nova Scotia in most of the mines from Feb. 1, 1928 to Jan. 31, 1930, a bonus to be paid quarterly based on profits was agreed upon.

³ Average earnings per day on contract, per ton, etc.

⁴ Minimum rate per day when not working on contract, per ton, yard, etc.

⁵ Including also 3 mines in southeastern British Columbia.

⁶ No figures for Chinese employees included.

Wage Deductions in Germany, January, 1933¹

THE following tables show examples of deductions from wages for various taxes and assessments, by groups of manual workers and salaried employees in Germany.

In regard to the taxes and other assessments quoted in the tables the following explanation is given:

Sickness insurance covers wage earners and salaried employees, the latter contributing on their salaries up to 3,600 marks (\$856.80)² per annum. Wage earners contribute on the amount of their earnings up to 70 marks (\$16.66) per week. Earnings above that sum are not considered.

Old age and invalidity insurance consists of two separate systems, one for wage earners and one for salaried employees.

The contributions by wage earners are graduated according to seven wage classes, the lowest including wage earners whose weekly wages are up to 6 marks (\$1.43) and the highest including those whose wages amount to 36 marks (\$8.57) and over. The lowest class contributes 0.30 mark (7.14 cents) per week and the highest class 2 marks (48 cents) per week.

The contributions of salaried employees are graduated according to 10 salary classes. The lowest class includes those whose monthly salary is not over 50 marks (\$11.90). Their monthly contribution is 2 marks (48 cents). The highest class of compulsorily insured includes those whose monthly salary is over 600 marks (\$142.80). Their contribution amounts to 30 marks (\$7.14) per month.

Unemployment insurance covers both wage earners and salaried employees. The contribution is assessed according to a scale of wages and salaries. For cases in which the scale is not applicable the contribution amounts to 6½ per cent of the income.

The relief tax is separate and distinct from unemployment insurance contributions and is paid by both wage earners and salaried employees for the purpose of providing funds out of which the emergency relief payments are made to those unemployed workers who have exhausted their unemployment insurance benefit.

Income tax is paid by both wage earners and salaried employees, and is deducted from the wages or salaries by the employer every month. The normal rate is 10 per cent. Certain allowances are made for dependents. If the wage or salary is more than 8,000 marks (\$1,904) per annum, the portion above 8,000 marks is assessed at the rates for assessed incomes.

Tax on unmarried is levied upon single persons, including widows, widowers, or separated persons provided that there are no children. This tax amounts to 10 per cent of the income tax.

Poll tax is collected by the local governments for local purposes and varies by localities, minimum rates being fixed by the Federal Government.

Church tax is a local tax paid by the members of churches. It is 10 per cent of the amount of the income tax. It is not assessed upon nonmembers of the church.

In regard to deductions from the earnings of salaried employees it is to be noted that the deductions in percentage of salaries are higher on the lower earnings than on the higher earnings.

¹ Report of C. W. Gray, United States vice consul at Berlin, Germany, Jan. 17, 1933.

¹ Poland. Central Statistical Office. Wiadomości Statystyczne, Jan. 25, 1933, pp. 51, 52.

TREND OF EMPLOYMENT

February 1933

THE Bureau of Labor Statistics of the United States Department of Labor presents in the following tables data compiled from pay-roll reports supplied by cooperating establishments in 17 of the important industrial groups of the country and covering the pay period ending nearest the 15th of the month.

Information for each of the 89 separate manufacturing industries and for the manufacturing industries combined is shown, following which are presented tabulations showing the changes in employment and pay rolls in the 16 nonmanufacturing groups included in the Bureau's monthly survey, together with information available concerning employment in the executive civil service and on class I railroads.

Employment in Selected Manufacturing Industries in February 1933

Comparison of Employment and Pay-Roll Totals in February 1933 with January 1933 and February 1932

EMPLOYMENT in manufacturing industries increased 1.6 percent in February 1933 as compared with January 1933, and pay-roll totals increased 1.7 percent over the month interval. Comparing February 1933 with February 1932, decreases of 12.3 percent in employment and 26.6 percent in pay rolls are shown over the 12-month period.

The percents of change in employment and pay-roll totals in February 1933 as compared with January 1933 are based on returns made by 17,773 establishments in 89 of the principal manufacturing industries in the United States, having in February 2,593,672 employees, whose combined earnings in one week were \$42,885,896.

The index of employment in February 1933 was 57.5 as compared with 56.6 in January 1933, 58.3 in December 1932, and 65.6 in February 1932; the pay-roll index in February 1933 was 36.4 as compared with 35.8 in January 1933, 37.7 in December 1932, and 49.6 in February 1932. The 12-month average for 1926 equals 100.

In table 1, which follows, are shown the number of identical establishments reporting in both January and February 1933 in the 89 manufacturing industries, together with the total number of employees on the pay rolls of these establishments during the pay period ending nearest February 15, the amount of their weekly earnings in February, the percents of change over the month and year intervals, and the indexes of employment and pay roll in February 1933.

The monthly percents of change for each of the 89 separate industries are computed by direct comparison of the total number of employees and of the amount of weekly pay roll reported in identical establishments for the two months considered. The percents of

change over the month interval in the several groups and in the total of the 89 manufacturing industries are computed from the index numbers of these groups, which are obtained by weighting the index numbers of the several industries in the groups by the number of employees or wages paid in the industries. The percents of change over the year interval in the separate industries, in the groups and in the totals, are computed from the index numbers of employment and pay-roll totals.

Per Capita Earnings in Manufacturing Industries

PER CAPITA weekly earnings in February 1933 for each of the 89 manufacturing industries surveyed by the Bureau of Labor Statistics, and for all industries combined, together with the percents of change in February 1933 as compared with January 1933 and February 1932 are shown in table 2.

These earnings must not be confused with full-time weekly rates of wages. They are per capita weekly earnings, computed by dividing the total amount of pay roll for the week by the total number of employees (part-time as well as full-time workers).

TABLE 2.—PER CAPITA WEEKLY EARNINGS IN MANUFACTURING INDUSTRIES IN FEBRUARY 1933 AND COMPARISON WITH JANUARY 1933 AND FEBRUARY 1932

Industry	Per capita weekly earnings in February 1933	Percent of change compared with—	
		January 1933	February 1932

(1) No change.

General Index Numbers of Employment and Pay-Roll Totals in Manufacturing Industries

GENERAL index numbers of employment and pay-roll totals in manufacturing industries by months, from January 1926 to February 1933, together with average indexes for each of the years from 1926 to 1932, and for the months of January and February 1933 are shown in the following table. In computing these general indexes, the index numbers of each of the separate industries are weighted according to their relative importance in the total. Following this table are two charts prepared from these general indexes showing the course of employment and pay rolls for each of the years 1926 to 1932, inclusive, and for January and February 1933.

TABLE 3.—GENERAL INDEXES OF EMPLOYMENT AND PAY ROLLS IN MANUFACTURING INDUSTRIES, JANUARY 1926 TO FEBRUARY 1933

[12-month average, 1926=100]

Month	Employment								Pay rolls							
	1926	1927	1928	1929	1930	1931	1932	1933	1926	1927	1928	1929	1930	1931	1932	1933

¹ Average for 2 months.

Time Worked in Manufacturing Industries in February 1933

REPORTS as to working time in February were received from 13,111 establishments in 89 manufacturing industries. Three percent of these establishments were idle, 45 percent operated on a full-time basis, and 51 percent worked on a part-time schedule.

An average of 85 percent of full-time operation in February was shown by reports received from all the operating establishments included in table 4. The establishments working part time in February averaged 72 percent of full-time operation.

A number of establishments supplying data concerning plant-operating time have reported full-time operations but have qualified the hours reported with a statement that, while the plant was operating full time, the work in the establishment was being shared and the employees were not working the full-time hours operated by the plant. Such establishments have been classified under full-time establishments in the following tabulation. The heading of the column concerning full-time plants has therefore been changed to read "Percent of establishments operating full time" instead of "Percent of establishments in which employees worked full time."

¹ Less than one half of 1 percent.**Employment in Nonmanufacturing Industries in February 1933**

IN THE following table are presented employment and pay-roll data for 15 groups of nonmanufacturing industries. Data concerning the building-construction industry is not included in the following tabulation, but is shown in more detail under the section "Building construction."

TABLE 1.—COMPARISON OF EMPLOYMENT AND PAY ROLLS IN NONMANUFACTURING ESTABLISHMENTS IN FEBRUARY 1933 WITH JANUARY 1933 AND FEBRUARY 1932

Industrial group	Estab- lish- ments report- ing in both Jan. and Feb. 1933	Employment			Pay-roll totals			Index num- bers, Feb. 1933 (average 1929=100)	
		Number on pay roll, Feb. 1933	Percent of change		Amount of pay roll (1 week), Feb. 1933	Percent of change		Em- ploy- ment	Pay- roll totals
			Jan. to Feb. 1933	Feb. 1932 to Feb. 1933		Jan. to Feb. 1933	Feb. 1932 to Feb. 1933		
Anthracite mining.....	160	80,390	+11.9	-17.6	\$2,259,501	+31.4	-0.9	58.7	56.8
Bituminous-coal mining.....	1,283	179,810	-.7	-10.5	2,528,610	+2.9	-20.9	69.3	37.2

¹ Less than one tenth of 1 percent.² Not available.

Per capita weekly earnings in February 1933 for 15 nonmanufacturing industries included in the Bureau's monthly trend-of-employment survey, together with the percents of change in February 1933 as compared with January 1933 and February 1932 are given in the table following. These per capita weekly earnings must not be confused with full-time weekly rates of wages; they are per capita weekly earnings computed by dividing the total amount of pay roll for the week by the total number of employees (part-time as well as full-time workers).

TABLE 2.—PER CAPITA WEEKLY EARNINGS IN 15 NONMANUFACTURING INDUSTRIES IN FEBRUARY 1933 AND COMPARISON WITH JANUARY 1933 AND FEBRUARY 1932

Industrial group	Per capita weekly earnings in Febru- ary 1933	Percent of change Feb- ruary 1933 compared with—	
		January 1933	February 1932
Coal mining:			
Anthracite.....	\$28.11	+17.4	+20.2

Banks, brokerage, insurance, and real estate.....	35.02	-.5	(²)

¹ The additional value of board, room, and tips cannot be computed.² Not available.

Indexes of Employment and Pay-Roll Totals for Nonmanufacturing Industries

INDEX numbers of employment and pay-roll totals for 14 nonmanufacturing industries are presented in the following table. The index numbers show the variation in employment and pay rolls in these groups, by months, from January 1929 to February 1933 with the exception of laundries and the dyeing and cleaning groups, for which information over the entire period is not available. The Bureau recently secured data concerning employment and pay rolls for the index base year 1929 from establishments in the laundries and the dyeing and cleaning groups, and has computed index numbers for these two groups, which now appear in this tabulation. The monthly collection of trend-of-employment statistics in these two groups did not begin until the later months of 1930, and, therefore, indexes for each month of the entire period are not available.

TABLE 2.—INDEXES OF EMPLOYMENT AND PAY ROLLS FOR NONMANUFACTURING INDUSTRIES, JANUARY TO DECEMBER 1930, 1931, AND 1932, AND JANUARY AND FEBRUARY 1933

¹ Average for 2 months.² Not including electric-railroad car building and repairing; see transportation equipment and railroad repair-shop groups, manufacturing industries, table 1.

Average Man-Hours Worked and Average Hourly Earnings

IN THE following tables the Bureau presents a tabulation of man-hours worked per week and average hourly earnings, based on reports supplied by identical establishments in January and February 1933 in 15 industrial groups and 72 manufacturing industries. Man-hour data for the building construction group and for the insurance, real estate, banking, and brokerage groups are not available, and data for several of the 89 manufacturing industries surveyed monthly are omitted from these tables due to lack of adequate information.

The total number of establishments supplying man-hour data in these 15 industrial groups represents approximately 50 percent of the establishments supplying monthly employment data.

The tabulations are based on reports supplying actual man-hours worked and do not include nominal man-hour totals, obtained by multiplying the total number of employees in the establishment by the plant operating time.

Table 1 shows the average hours worked per employee per week and average hourly earnings in 15 industrial groups and for all groups combined. The average hours per week and average hourly earnings for the combined total of the 15 industrial groups are weighted averages, wherein the average man-hours and average hourly earnings in each industrial group are multiplied by the total number of employees in the group in the current month and the sum of these products divided by the total number of employees in the combined 15 industrial groups.

In presenting information for the separate manufacturing industries shown in table 2, data are published for only those industries in which the available man-hour information covers 20 percent or more of the total number of employees in the industry at the present time. The average man-hours and hourly earnings for the combined 89 manufacturing industries have been weighted in the same manner as the averages for all industrial groups combined, table 1.

Per capita weekly earnings, computed by multiplying the average man-hours worked per week by the average hourly earnings shown in the following table, are not identical to the per capita weekly earnings appearing elsewhere in this trend-of-employment compilation, which are obtained by dividing the total weekly earnings in all establishments reporting by the total number of employees in those establishments. As already noted, the basic information upon which the average weekly man-hours and average hourly earnings are computed covers approximately 50 percent of the establishments reporting monthly employment data.

TABLE 1.—AVERAGE HOURS WORKED PER WEEK PER EMPLOYEE AND AVERAGE HOURLY EARNINGS IN 15 INDUSTRIAL GROUPS, JANUARY AND FEBRUARY 1933

Employment in Building Construction in February 1933

EMPLOYMENT in the building construction industry decreased 9.1 percent in February as compared with January and pay rolls decreased 16.5 percent over the month interval.

The percents of change of employment and pay-roll totals in February as compared with January are based on returns made by 9,775 firms employing in February 57,665 workers in the various trades in the building construction industry. These reports cover building operations in various localities in 34 States and the District of Columbia.

COMPARISON OF EMPLOYMENT AND TOTAL PAY ROLL IN THE BUILDING CONSTRUCTION INDUSTRY IN IDENTICAL FIRMS, JANUARY AND FEBRUARY 1933

¹ Data supplied by cooperating State bureaus.**Trend of Employment in February 1933 by States**

IN THE following table are shown the fluctuations in employment and pay-roll totals in February 1933 as compared with January 1933 in certain industrial groups by States. These tabulations have been prepared from data secured directly from reporting establishments and from information supplied by cooperating State agencies. The combined total of all groups does not include building-construction data, information concerning which is published elsewhere in a separate tabulation by city and State totals. In addition to the combined total of all groups, the trend of employment and pay rolls in the manufacturing, public utility, hotel, wholesale trade, retail trade, bituminous-coal mining, crude-petroleum producing, quarrying and nonmetallic mining, metalliferous mining, laundries, and dyeing and cleaning groups are presented. In this State compilation, the totals of the telephone and telegraph, power and light, and electric-railroad operation groups have been combined and are presented as one group—public utilities. Due to the extreme seasonal fluctuations in the canning and preserving industry, and the fact that during certain months the activity in this industry in a number of States is negligible, data for this industry are not presented separately. The number of employees and the amount of weekly pay roll in January and February 1933 as reported by identical establishments in this industry are included, however, in the combined total of "All groups."

The percents of change shown in the accompanying table, unless otherwise noted, are unweighted percents of change; that is, the industries included in the groups, and the groups comprising the total of all groups, have not been weighted according to their relative importance in the combined totals.

As the anthracite-mining industry is confined entirely to the State of Pennsylvania, the changes reported in this industry in table 1, nonmanufacturing industries, are the fluctuations in this industry by State totals.

When the identity of any reporting company would be disclosed by the publication of a State total for any industrial group, figures for the group do not appear in the separate industrial-group tabulation, but are included in the State totals for "All groups." Data are not presented for any industrial group when the representation in the State covers less than three establishments.

Employment and Pay Roll in February 1933 in Cities of Over 500,000 Population

IN THE following table are presented the fluctuations in employment and pay-roll totals in February 1933 as compared with January 1933 in 13 cities of the United States having a population of 500,000 or over. These changes are computed from reports received from identical establishments in each of the months considered.

In addition to including reports received from establishments in the several industrial groups regularly covered in the Bureau's survey, excluding building construction, reports have also been secured from other establishments in these cities for inclusion in these totals. Information concerning employment in building construction is not available for all cities at this time and therefore has not been included.

FLUCTUATIONS IN EMPLOYMENT AND PAY ROLLS IN FEBRUARY 1933 AS COMPARED WITH JANUARY 1933

Employment in the Executive Civil Service of the United States, February 1933

THE number of employees in the executive civil service of the United States was 9,277 less in February 1933 than in February 1932. Comparing February 1933 with January 1933 there was an increase of 326.

These figures do not include the legislative, judicial, or Army and Navy services. The data as shown in the table below were compiled by the various Federal departments and offices and sent to the United States Civil Service Commission where they are assembled. They are tabulated by the United States Bureau of Labor Statistics, and published here by courtesy of the Civil Service Commission and in compliance with the direction of Congress. No information has as yet been collected relative to the amounts of pay rolls. Because of the importance of Washington as a Government center, the figures for the District of Columbia, and for the Government service outside of the District of Columbia, are shown separately.

Approximately 12 percent of the total number of Federal employees are employed in the District of Columbia. The number of employees in the District of Columbia showed a decrease of 3.5 percent in February 1933 as compared with February 1932. The number of permanent employees in the District of Columbia decreased 3 percent, and the number of temporary employees decreased 12.3 percent comparing February 1933 with the same month of 1932.

EMPLOYEES IN THE EXECUTIVE CIVIL SERVICE OF THE UNITED STATES FEBRUARY 1932 AND JANUARY AND FEBRUARY 1933¹

¹ Certain revisions have been made from time to time by the Civil Service Commission in dropping certain classes of employees, previously carried in the tabulations. Thus, in the District of Columbia, 68 mail contractors and special-delivery messengers were eliminated in May 1932, and in the service outside the District of Columbia, 35,800 star route and other contractors, clerks in charge of mail contract stations, clerks in third-class post offices and special-delivery messengers were eliminated in April 1932 and 835 collaborators of the Department of Agriculture in June 1932. In the table in order to make the figures comparable for the months shown, it was assumed that the number of these employees was the same in 1932 as in the month they were dropped (actual figures not being available from the Civil Service Commission) and the data for this month has been revised accordingly in this table.

² Not including the field service of the post office.

³ Less than one tenth of 1 percent.

Employment on Class I Steam Railroads in the United States

DATA are not yet available concerning railroad employment for February 1933. Reports of the Interstate Commerce Commission for class I railroads show that the number of employees (exclusive of executive and officials) decreased from 980,501 on December 15, 1932, to 947,327 on January 15, 1933, or 3.4 percent; the amount of pay roll decreased from \$114,284,718 in December 1932 to \$110,229,285 in January, or 3.5 percent.

The monthly trend of employment from January 1923 to January 1932 on class I railroads—that is, all roads having operating revenues of \$1,000,000 or over—is shown by index numbers published in the following table. These index numbers are constructed from monthly reports of the Interstate Commerce Commission, using the 12-month average for 1926 as 100.

TABLE 1.—INDEXES OF EMPLOYMENT, ON CLASS I STEAM RAILROADS IN THE UNITED STATES, JANUARY 1923 TO JANUARY 1933

[12-month average, 1926=100]

Month	1923	1924	1925	1926	1927	1928	1929	1930	1931	1932	1933

Table 2 shows the total number of employees on the 15th day each of January, 1932, and December, 1932, and January, 1933, and total pay roll for the entire months.

In these tabulations data for the occupational group reported as "executives, officials, and staff assistants" are omitted.

TABLE 2.—EMPLOYMENT AND EARNINGS OF RAILROAD EMPLOYEES, JANUARY, 1932, AND DECEMBER, 1932, AND JANUARY, 1933

[From monthly reports of Interstate Commerce Commission. As data for only the more important occupations are shown separately, the group totals are not the sum of the items under the respective groups]

Occupations	Number of employees at middle of month			Total earnings		
	January, 1932	December, 1932	January, 1933	January, 1932	December, 1932	January, 1933
Professional, clerical, and general.....	201,832	173,861	¹ 168,472	\$28,833,163	\$22,889,560	¹ \$22,099,465

All employees.....	1,094,296	980,501	947,327	142,556,705	114,284,718	110,229,285

¹ The totals shown for each of the separate occupations and for the several occupational groups in January, 1933, are not comparable with figures shown for preceding months, as data for 17 switching and terminal companies have been omitted from the January, 1933, totals. These data will not be included in future reports of the Interstate Commerce Commission and, therefore, will be omitted by this Bureau. The 17 switching and terminal companies which have been omitted employed in January, 1933, 14,223 persons whose total earnings in that month were \$1,765,753. The totals shown for "all employees" have been adjusted to include these switching and terminal companies' employees and are, therefore, comparable with those of previous months.

Unemployment in Foreign Countries

THE following table gives detailed monthly statistics of unemployment in foreign countries, as shown in official reports from February, 1931, to the latest available date:

STATEMENT OF UNEMPLOYMENT IN FOREIGN COUNTRIES

RETAIL PRICES

Retail Prices of Food in February, 1933

THE following tables are compiled from simple averages of the actual selling prices received monthly by the Bureau of Labor Statistics of the United States Department of Labor from retail dealers in 51 cities.

Indexes of all articles combined, or groups of articles combined, both for cities and for the United States, are weighted according to the average family consumption. Consumption figures used since January, 1921, are given in Bulletin 495 (p. 13). Those used for prior dates are given in Bulletin 300 (p. 61).

Table 1 shows the average retail prices of 42 principal food articles for the United States, 51 cities combined, and index numbers for 23 food articles based on the year 1913, for the year 1913 and for February 15, 1932, and January 15 and February 15, 1933. Comparable information by months, January, 1929, to December, 1932, inclusive, are given in the January, 1933, issue of this publication. These figures are a continuation of data shown in Bulletin 495, pages 32 to 51, inclusive.

TABLE 1.—AVERAGE RETAIL PRICES AND INDEX NUMBERS OF PRINCIPAL ARTICLES OF FOOD IN THE UNITED STATES FOR THE YEAR 1913 AND BY MONTHS, FEBRUARY 15, 1932, AND JANUARY 15 AND FEBRUARY 15, 1933

Table 2 shows index numbers of the weighted cost of three important groups of food, viz, cereals, meats, and dairy products, based on the year 1913 as 100, and changes in February, 1933, compared with February, 1932, and January, 1933. The list of articles included in these groups will be found in the May, 1932, issue of this publication, and monthly indexes for the year 1932 in the December, 1932, issue.

TABLE 2.—INDEX NUMBERS OF CEREALS, MEATS, AND DAIRY PRODUCTS FOR THE UNITED STATES, AND PER CENT OF CHANGE ON FEBRUARY 15, 1933, COMPARED WITH FEBRUARY 15, 1932, AND JANUARY 15, 1933

Article	Index (1913=100.0)			Per cent of change Feb. 15, 1933, compared with—	
	Feb. 15, 1932	Jan. 15, 1933	Feb. 15, 1933	Feb. 15, 1932	Jan. 15, 1933
Cereals.....	125.0	112.3	112.0	-10.4	-0.3
Meats.....	117.3	99.9	99.0	-15.6	-0.9
Dairy products.....	102.9	93.3	90.3	-12.3	-3.2

Table 3 shows index numbers of the weighted cost of food for the United States and 39 cities, based on the year 1913 as 100. The per cent of change in February, 1933, compared with February, 1932, and January, 1933, is also given for these cities and the United States, and for 12 additional cities from which prices were not secured in 1913.

TREND OF RETAIL PRICES OF FOOD (1913 = 100)

TABLE 3.—INDEX NUMBERS OF THE WEIGHTED COST OF FOOD AND PER CENT OF CHANGE FEBRUARY 15, 1933, COMPARED WITH FEBRUARY 15, 1932, AND JANUARY 15, 1933, BY CITIES AND FOR THE UNITED STATES

City	Index 1913=100.0			Per cent of change February, 1933, compared with—		City	Index 1913=100.0			Per cent of change February, 1933, compared with—	
	February, 1932	January, 1933	February, 1933	February, 1932	January, 1933		February, 1932	January, 1933	February, 1933	February, 1932	January, 1933

Table 4 shows weighted index numbers of the retail cost of food in each of 39 cities and for the United States (all cities combined) by months and years from January, 1929, to December, 1932, inclusive. These index numbers are based on the average cost of food in the year 1913 as 100. The figures are a continuation of data published in Bulletin 495 (pp. 30 and 31).

TABLE 4.—INDEX NUMBERS SHOWING CHANGES IN THE RETAIL COST OF FOOD IN SPECIFIED CITIES BY MONTHS AND YEARS JANUARY, 1929, TO DECEMBER, 1932, INCLUSIVE

[1913=100]

Retail Prices of Coal in February, 1933

RETAIL prices of coal are secured in each of the 51 cities in which retail food prices are obtained. The prices quoted are for coal delivered to consumers but do not include charges for storing the coal in cellar or bins where an extra handling is necessary.

Average prices for the United States for bituminous coal and for stove and chestnut sizes of Pennsylvania anthracite are computed from the quotations received from retail dealers in all cities where these coals are sold for household use. The prices shown for bituminous coal are averages of prices of the several kinds. In addition to the prices for Pennsylvania anthracite, prices are shown for Colorado, Arkansas, and New Mexico anthracite in those cities where these coals form any considerable portion of the sales for household use.

The following tables show average retail prices of coal per ton of 2,000 pounds on February 15, 1932, and January 15 and February 15, 1933. Table 1 shows for the United States average retail prices, index numbers (1913=100), and percentage change in the year and in the month. Table 2 shows average retail prices by cities.

TABLE 1.—AVERAGE RETAIL PRICES AND INDEX NUMBERS OF COAL FOR THE UNITED STATES, AND PER CENT OF CHANGE ON FEBRUARY 15, 1933, COMPARED WITH FEBRUARY 15, 1932, AND JANUARY 15, 1933

¹ The average price of coal delivered in bins is 50 cents higher than here shown. Practically all coal is delivered in bins.

² All coal sold in Savannah is weighed by the city. A charge of 10 cents per ton or half ton is made. This additional charge has been included in the above price.

³ Per ton of 2,240 pounds.

Retail Prices of Food in the United States and in Certain Foreign Countries

THE index numbers of retail prices of food published by certain foreign countries have been brought together with those of the Bureau of Labor Statistics of the United States Department of Labor in the subjoined table, the base years in all cases being as given in the original reports. As stated in the table, the number of articles included in the index numbers for the different countries differs widely. These results, which are designed merely to show price trends and not actual differences in prices in the several countries should not, therefore, be considered as closely comparable with one another. In certain instances, also, the figures are not absolutely comparable from month to month over the entire period, owing to slight changes in the list of commodities and the localities included on successive dates. Indexes are shown for July of each year from 1926 to 1930, inclusive, and by months since January, 1931.

WHOLESALE PRICES

Index Numbers of Wholesale Prices, 1913 to February, 1933

THE following table presents the index numbers of wholesale prices by groups of commodities, by years, from 1913 to 1932, inclusive, and by months from January, 1931, to date:

INDEX NUMBERS OF WHOLESALE PRICES

[1925=100.0]

Year and month	Farm products	Foods	Hides and leather products	Textile products	Fuel and lighting	Metals and metal products	Building materials	Chemicals and drugs	House-furnishing goods	Miscellaneous	All commodities
1913.....	71.5	64.2	68.1	57.3	61.3	90.8	56.7	80.2	56.3	93.1	69.8
1914.....	71.2	64.7	70.9	54.6	56.6	80.2	52.7	81.4	56.8	89.9	68.1
1915.....	71.5	65.4	75.5	54.1	51.8	86.3	53.5	112.0	56.0	86.9	69.5
1916.....	84.4	75.7	93.4	70.4	74.3	116.5	67.6	160.7	61.4	100.6	85.5
1917.....	129.0	104.5	123.8	98.7	105.4	150.6	88.2	165.0	74.2	122.1	117.5

Miscellaneous.....	60.8	60.6	59.7	59.6

Wholesale Price Trends During February, 1933

THE index number of wholesale commodity prices as computed by the Bureau of Labor Statistics of the United States Department of Labor shows a decrease from January, 1933, to February, 1933. This index number which includes 784 commodities or price series weighted according to the importance of each commodity and based on the average prices for the year 1926 as 100, averaged 59.8 for February as compared with 61.0 for January, showing a decrease of 2 per cent between the two months. When compared with February, 1932, with an index number of 66.3, a decrease of over 9½ per cent has been recorded in the 12 months.

In the group of farm products decreases in the average prices of barley, corn, oats, rye, live poultry, cotton, eggs, lemons, oranges, hay, fresh milk in New York, and wool caused the group as a whole to decrease slightly less than 4 per cent from the previous month. Increases were recorded in the average prices of most wheat, calves, cows, steers, hogs, tobacco, and sweetpotatoes.

Among foods price decreases during the month were reported for butter, cheese, evaporated milk, most canned fruits and vegetables, cured and fresh beef, mutton, dressed poultry, coffee, cocoa beans, lard, and granulated sugar. On the other hand, dried fruits, canned tomatoes, fresh lamb, fresh pork, veal, and raw sugar averaged higher than in the month before. The group as a whole decreased about 3¾ per cent in February when compared with January.

The hides and leather products group decreased 1½ per cent during the month due to decreases in all subgroups. Textile products as a whole decreased slightly more than 1½ per cent from January to February. All subgroups shared in the decline.

In the fuel and lighting materials group sharp reductions in the average prices of crude petroleum and petroleum products caused the

group as a whole to decline more than $3\frac{1}{2}$ per cent during the month. Bituminous coal, coke, and electricity showed minor reductions also, while gas increased slightly and anthracite coal remained at the January level.

Metals and metal products as a whole showed a further downward tendency for February, with all subgroups contributing to the decline. The index for the group was 1 per cent lower than for the month

before. In the group of building materials the average prices of brick and tile, cement, and lumber moved upward during the month. Paint and paint materials, and other building materials moved downward, while structural steel showed no change during February. The group as a whole recorded a decrease of less than one-half of 1 per cent between the two months.

In the group of chemicals and drugs all subgroups showed slight recessions during February, causing the group to decline practically one-half of 1 per cent from the month before. As a whole the house-furnishing goods group decreased slightly more than three-fourths of 1 per cent from the previous month, both furniture and furnishings shared in the decline.

The group of miscellaneous commodities decreased $3\frac{1}{4}$ per cent between January and February, due to declining prices of automobile tires and tubes, crude rubber, and other miscellaneous articles. Cattle feed and paper and pulp showed increases during the month.

The February averages for all the special groups of commodities were below those for January, ranging from 1 per cent in the case of semimanufactured articles to more than $3\frac{1}{2}$ per cent in the case of raw materials.

Between January and February price decreases took place in 253 instances, increases in 57 instances, while in 474 instances no change in price occurred.

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS AND SUBGROUPS OF COMMODITIES

COST OF LIVING

Changes in Cost of Canadian Family Budget, 1922 to 1932

THE Canadian Department of Labor has recently issued figures ¹ showing the cost per week, in specified months from 1922 to 1932, of the family budget in terms of average retail prices of certain classes of commodities in some 60 Canadian cities.

The following items are included in the budget:

TABLE 1.—ITEMS OF CANADIAN FAMILY BUDGET

Item	Quantity	Item	Quantity
Foods (29):		Foods (29)—Continued.	
Beef, sirloin, steak	pounds 2	Beans, hand-picked	pounds 2
Beef, shoulder	do 2	Apples, evaporated	do 1
Veal, shoulder	do 1	Prunes, medium	do 1
Mutton, roast	do 1	Sugar, granulated	do 4
Pork, leg	do 1	Sugar, yellow	do 2
Pork, salt	do 2	Tea, black ¹	do ¼
Bacon, breakfast	do 1	Tea, green ¹	do ¼
Lard, pure	do 2	Coffee	do ¼
Eggs, fresh	dozen 1	Potatoes	bags ¼
Eggs, storage	do 1	Vinegar	quarts ¼
Milk	quarts 6	Starch, laundry	pounds ¼
Butter, dairy	pounds 2	Fuel and lighting:	
Butter, creamery	do 1	Coal, anthracite	tons ¼
Cheese, old ¹	do 1	Coal, bituminous	do ¼
Cheese, new ¹	do 1	Wood, hard	cords ¼
Bread	do 15	Wood, soft	do ¼
Flour, family ¹	do 10	Coal oil	gallons 1
Rollod oats	do 5	Rent	months ¼
Rice ¹	do 2		

¹ Kind most sold since October, 1922.

While this budget serves to indicate the rise or fall from time to time in the cost of the included items, it is not intended to show the minimum cost of food and fuel for an average family in Canada or in any one of its Provinces. The quantities of meats, cereals, dairy products, etc., in this budget were adopted as constituting a weekly liberal allowance for the healthy family of a man engaged in hard physical labor. An average family, however, with an income sufficient to do so, would purchase less meat, etc., but more fresh and canned vegetables, fruit, etc., so that there would be little change in the total amount of expenditure for food.

For the average family of five the expenditure for the items in this budget would perhaps be equivalent to 65 per cent of the total income. It is estimated that an allowance for clothing and sundries would increase the given totals about 50 per cent.

IMMIGRATION AND EMIGRATION

Statistics of Immigration for January, 1933

By J. J. KUNNA, CHIEF STATISTICIAN, UNITED STATES BUREAU OF IMMIGRATION

THE statistics for January show 8,138 aliens admitted to the United States, the immigrants or newcomers for permanent residence in this country numbering 1,511 and the nonimmigrants or visitors 6,627. This is a decrease of both classes compared with the previous month, when 1,846 immigrants and 7,132 nonimmigrants, a total of 8,978 aliens, were admitted. Alien departures from the country during January included 5,019 emigrants and 11,793 nonemigrants. A total of 14,159 American citizens left during the month for foreign lands and 19,792 returned.

Of the 1,511 immigrants admitted in January, 822, or 54 per cent, came from European countries. Italy, the principal source of present-day immigration from overseas, contributed 181, over two-thirds of whom came in under the immigration act of 1924, as husbands, wives, and unmarried children of United States citizens. Poland was second with 173, followed by Germany with 119. The other countries of Europe, with a total of 349, sent less than 60 each. The Western Hemisphere supplied 639 of the January immigrants, Canada and Mexico contributing the major portion or 94 per cent, 333 coming from the former and 172 from the latter. Compared with the corresponding month a year ago, European immigration dropped 37 per cent, Canadian immigration 26 per cent, and from other countries 24 per cent.

During January last, 1,220 aliens were deported from the United States for various causes under the immigration laws, and 82 indigent aliens were returned to their native land at their own request.

INWARD AND OUTWARD PASSENGER MOVEMENT FROM JULY 1, 1932, TO JANUARY 31, 1933

¹ These aliens are not included among arrivals, as they were not permitted to enter the United States.

² These aliens (exclusive of visitors across land borders) are included among aliens departed, they having entered the United States, legally or illegally, and later deported.

Immigration into Canada During 1932

A DECREASE of 25 per cent in the total number of immigrants admitted to Canada during the calendar year 1932 as compared with 1931 is shown in the Statistics of the Dominion Department of Immigration and Colonization, published in the February, 1933, issue of the Canadian Labor Gazette (p. 249). Of the 20,591 immigrants who were admitted in 1932, 3,327 were British, 13,709 were from the United States, 909 were classified as belonging to northern European races, and 2,646 to other races. In contrast with the record for 1931, these figures show a reduction of 57 per cent in British immigration, 10 per cent in the number of immigrants from the United States, 31 per cent in the number of immigrants of northern European races, and 21 per cent for other races.

In Table 1 the extent of immigration to Canada for each racial group in 1931 and 1932 is reported. Table 2 gives the sex, occupational class, and the destination of the immigrants admitted to the Dominion in 1932.

PUBLICATIONS RELATING TO LABOR

Official—United States

IOWA.—Workmen's Compensation Service. *Tenth biennial report, for the period ending June 30, 1932, and report of decisions by the department and State courts.* Des Moines, 1932. 168 pp.

Reviewed in this issue.

KANSAS.—Commission of Labor and Industry. Workmen's Compensation Department. *Annual report, for fiscal year ending June 30, 1932.* Topeka, 1932. 14 pp.

Data from advance copy of report were published in December, 1932, issue.

MASSACHUSETTS.—Department of Education. Division of Immigration and Americanization. *Annual report, for the year ending November 30, 1932.* [Boston, 1933?] 15 pp.

Through the friendly services of the division the State endeavors to assimilate its foreign-born residents and assist them in various difficulties.

— Department of Labor and Industries. *Labor Bulletin No. 163: Thirtieth annual directory of labor organizations in Massachusetts, 1931.* [Boston, 1932?] 76 pp.

MINNESOTA.—Compensation Insurance Board. *Fifth biennial report, covering the period ending December 31, 1932.* St. Paul, 1933. 22 pp., charts.

Contains an explanation of the 1931 and 1932 emergency increases in compensation insurance premium rates, with summary tables showing the experience of insurance companies writing workmen's compensation in the State.

NEW YORK.—Department of Labor. *Special Bulletin No. 176: Causes of compensated accidents, year ended June 30, 1930. Prepared by Division of Statistics and Information.* Albany, 1932. 71 pp.

Reviewed in this issue.

— — *Special Bulletin No. 178: Cost of compensation, two years, 1930 and 1931. Prepared by Division of Statistics and Information.* Albany, 1932. 92 pp.

Reviewed in this issue.

— — Division of Junior Placement. *Jobs for juniors.* New York, 80 Centre Street, 1932. 8 pp. (Revised.)

— — — *Unemployment and the junior worker: Some problems to be faced in dealing with unemployed boys and girls during a period of business depression and a suggested plan for meeting those problems.* New York, 80 Centre Street, 1931. 6 pp.

NORTH DAKOTA.—Coal Mine Inspection Department. *Fourteenth annual report, from November 1, 1931, to October 31, 1932.* Bismarck, 1932. 32 pp.

The report covers employment, production, and accidents.

— Workmen's Compensation Bureau. Minimum Wage Department. *Seventh biennial report, for the biennium ending June 30, 1932.* Bismarck, [1932?]. 39 pp.

OHIO.—Commission on Unemployment Insurance. *Report. Part II—Studies and reports.* Columbus, 1933. 304 pp., charts.

PENNSYLVANIA.—Department of Mines. *Tons of coal mined, days worked, persons employed, killed and injured, explosives used, 1932.* [Harrisburg], 1933. 28 pp. (Mimeographed.)

A tabular statement, by mines and regions, covering the salient statistics of anthracite mining in Pennsylvania for the year 1932.

WISCONSIN.—Industrial Commission. *Bureau of Unemployment Relief Series, No. 4: Unemployment relief in Wisconsin, 1932-1933. Madison, 1933. 33 pp., map.*

A report of the expenditures for unemployment relief and the types of relief given in Wisconsin during 1932, with an estimate of the cost of relief in 1933.

UNITED STATES.—Congress. House of Representatives. *Report No. 1999 (72d Cong., 2d sess.): Prevent interstate commerce in industrial activities in which persons are employed more than five days per week or six hours per day. Report [to accompany H. R. 14518] of Mr. Connery, Committee on Labor. Washington, 1933. 5 pp.*

— Committee on Labor. *Six-hour day—five-day week. Hearings (72d Cong., 2d sess.) on H. R. 14105, a bill to prevent interstate commerce in certain commodities and articles produced or manufactured in industrial activities in which persons are employed more than five days per week or six hours per day, January, 1933. Washington, 1933. 262 pp.*

— Committee on Ways and Means. *National emergency relief. Hearings (72d Cong., 1st sess.) on H. R. 12353, a bill to relieve destitution, to broaden the lending powers of the Reconstruction Finance Corporation, and to create employment by authorizing and expediting a public-works program and providing a method of financing such program, May and June, 1932. Washington, 1932. 309 pp.*

— Senate. *Document No. 129 (72d Cong., 1st sess.): Railroad salaries. Letter of Hon. Joseph B. Eastman, member of the Interstate Commerce Commission, to Hon. James Couzens, United States Senate, transmitting certain information relative to salaries of officials on Class I railroads in December, 1929, and March, 1932. Washington, 1932. 51 pp.*

— Committee on Manufactures. *Federal aid for unemployment relief. Hearings (72d Cong., 2d sess.) on S. 5125, a bill to provide for cooperation by the Federal Government with the several States in relieving the hardship and suffering caused by unemployment, and for other purposes, January and February, 1933. Washington, 1933. 553 pp. In two parts.*

— Relief for unemployed transients. *Hearings (72d Cong., 2d sess.) on S. 5121, a bill to amend Title I of the emergency relief and construction act of 1932, approved July 21, 1932 (47 Stat. L. 709), by authorizing cooperation by the Federal Government with the several States and Territories in relieving distress among unemployed needy transients, January 13-25, 1933. Washington, 1933. 203 pp.*

— Committee on the District of Columbia. *Emergency unemployment relief and care of persons in distress. Hearing (72d Cong., 1st sess.) on S. 4781, a bill authorizing an emergency appropriation for the relief of needy and distressed residents of the District of Columbia and for the temporary care of transient and homeless persons in said district, June 1, 1932. Washington, 1932. 27 pp.*

— Committee on the Judiciary. *Thirty-hour work week. Hearings (72d Cong., 2d sess.) on S. 5267, a bill to prevent interstate commerce in certain commodities and articles produced or manufactured in industrial activities in which persons are employed more than five days per week or six hours per day, January and February, 1933. Washington, 1933. 641 pp. In two parts.*

— Department of Commerce. Bureau of Foreign and Domestic Commerce. *Commerce yearbook, 1932. Vol. II—Foreign countries. Washington, 1933. 743 pp., maps, charts.*

Reviews economic conditions and events in 78 foreign countries, the subjects covered including production, prices, and, for some countries, labor conditions.

— Bureau of Mines. *Annual report, for the fiscal year ended June 30, 1932. Washington, 1932. 30 pp.*

The work of the health and safety branch during the year included chemical and pathological studies of the effects of carbon monoxide, toxicity of refrigerants, silicosis, and the effects of air pollution by automobile-exhaust gas.

— *Technical Paper 534: Falls of roof and coal in mines operating in the Pittsburgh coal bed, Panhandle district, West Virginia, by J. W. Paul and J. N. Geyer. Washington, 1932. 34 pp., map, diagrams.*

The result of studies in six mines to ascertain the methods used to prevent injury to workers from falls of roof material and of coal from the sides.

UNITED STATES.—Department of Commerce. Bureau of Mines. *Technical Paper 537: Maintenance of electrical mine equipment from the viewpoint of the safety inspector*, by E. J. Gleim and H. B. Freeman. Washington, 1932. 22 pp.

Outlines inspection procedure, discusses the most common defects in equipment, and describes some safety practices adopted.

— — — — *Technical Paper 541: A study of mine roof of the Pittsburgh coal bed in the Pittsburgh mining district*, by J. W. Paul and L. N. Plein. Washington, 1932. 98 pp., map, diagrams.

Describes a study made to determine to what extent the methods of mining and timbering of mines influence falls of roofs and coal resulting in injury or death of workers, and calls attention to preventive measures.

— — — Bureau of Standards. *Circular No. 397: Safety for the household*. Washington, 1932. 102 pp., diagrams, illus.

A discussion of hazards which occur in the home, with suggestions on how to eliminate or at least reduce the great number of accidents in the household, estimated to cause approximately 30,000 deaths a year.

— — — Bureau of the Census. *Fifteenth Census of the United States, 1930: Occupation statistics—Color and nativity of gainful workers*. Washington, 1933. 40 pp. (Reprint of chapter 3, Volume V, *Fifteenth Census reports on population*.)

— — — Department of Labor. Bureau of Labor Statistics. *Bulletin No. 576: Wages and hours of labor in the slaughtering and meat-packing industry in 1931*. Washington, 1933. 165 pp.

An advance summary of this report was published in the *Monthly Labor Review* for June, 1932.

— — — Women's Bureau. *Bulletin No. 97: The employment of women in the sewing trades of Connecticut (preliminary report)*. Washington, 1932. 13 pp.

— — — *Bulletin No. 99: The installation and maintenance of toilet facilities in places of employment*. Washington, 1933. 86 pp., charts.

One of a series of handbooks being prepared by the Women's Bureau on standards and practices in working conditions for women.

— — — *Bulletin No. 101: The employment of women in vitreous enameling*, by Ethel L. Best. Washington, 1932. 61 pp., illus.

Reviewed in this issue.

— — — Department of the Interior. Office of Education. *Bulletin (1932) No. 16: Bibliography of research studies in education, 1930-31*. Washington, 1932. 459 pp.

Includes references on manual and vocational training, vocational guidance, and adult education.

— — — Employees' Compensation Commission. *Sixteenth annual report, July 1, 1931, to June 30, 1932*. Washington, 1932. 68 pp.

Reviewed in this issue.

Official—Foreign Countries

BELGIUM.—Ministère de l'Industrie, du Travail et de la Prévoyance Sociale. *Rapport sur la réparation des dommages résultant des accidents du travail pendant les années 1927, 1928, and 1929*. Brussels, 1932. 259 pp.

Report on the operation of the workmen's compensation law in Belgium during the years 1927 to 1929.

CANADA.—Bureau of Statistics. *Canada, 1933: The official handbook of present conditions and recent progress*. Ottawa, 1933. 192 pp., map, charts, illus.

A compilation of material obtained from different branches of the Government, including data on building operations, cooperation, cost of living, employment, industrial disputes, old-age pensions, prices, production, and unemployment relief.

CANADA.—Department of Labor. *Prices in Canada and other countries, 1932.* Ottawa, 1933. 30 pp. (Issued as a supplement to the *Labor Gazette*, January, 1933.)

Data from the report are published in this issue of the *Monthly Labor Review*.

— *Wages and hours of labor in Canada, 1930, 1931, and 1932.* Ottawa, 1933. 71 pp. (Issued as a supplement to the *Labor Gazette*, January, 1933.)

Data from this report are published in this issue of the *Monthly Labor Review*.

CZECHOSLOVAKIA.—Socialni Ustav. *Publikace Číslo 56: Světová hospodářská krise a nezaměstnanost.* Prague, 1932. 186 pp., charts.

Contains a number of articles by various authors dealing with the world's economic depression and with unemployment. Printed in Czech, with summaries in German.

DANZIG (GERMANY).—Statistisches Landesamt. *Danziger statistisches Taschenbuch, 1933.* Danzig, 1932. 176 pp., map.

Includes information on prices, wages, employment, welfare work, social insurance, etc. Some of the statistics are for 1932 but the greater part of them are for 1931 and earlier years.

FINLAND.—[Sosialiministeriö. Sosialinen Tutkimus- ja Tilastotoimisto.] *Työssä sattuneet tapaturmat vuonna 1928.* Helsingfors, 1932. 61 pp. (Suomen Virallinen Tilasto, XXVI A, uusi sarja 2.)

A report on accidents in Finland in 1928, with comparative data for earlier years. The table of contents and some of the table heads are in both Finnish and French.

— Tilastollisen Päätoimiston. *Suomen tilastollinen vuosikirja, 1932.* Helsingfors, 1932. 374 pp. (In Finnish and French.)

This statistical annual for Finland includes information on employment, work of employment offices, industrial accidents, strikes and lockouts, wages, and workers' organizations. The section of the volume giving international comparisons includes statistics on labor disputes, unemployment, and index numbers of wholesale prices and cost of living. The data relate principally to 1931 and earlier years, but for wholesale prices and cost of living figures are given for 1932.

GREAT BRITAIN.—Industrial Health Research Board. *Report No. 67: Manual dexterity—effects of training. I. Transfer of training in manual dexterity and visual discrimination, by E. M. Henshaw, P. Holman, and J. N. Langdon. II. Distribution of practice in manual dexterity, by E. M. Henshaw and P. Holman.* London, 1933. 37 pp.

Tests were carried out in these investigations to determine whether training in one form of manual operation assists in training for another form of manual activity, and the effect of overtraining and of different lengths of work period on output. The first study failed to show that there was any transferred ability as the result of training and the second that there is probably far more waste time in overtraining than is generally supposed.

— Mines Department. Safety in Mines Research Board. *Paper No. 75: Gob-fires—Part I, Explosions in sealed-off areas in nongassy seams, by T. N. Mason and F. V. Tideswell.* London, 1933. 30 pp., diagrams, illus.

— Ministry of Labor. *Report on the work of local committees for juvenile employment during the year 1931.* London, 1932. 29 pp.

A brief review of this report was published in the *Monthly Labor Review* for January, 1933 (p. 106).

GREECE.—Statistique Générale. *Annuaire statistique de la Grèce, 1931.* Athens, [1932?]. 452 pp., maps, charts. (In Greek and French.)

This general statistical yearbook of Greece includes statistics on production, prices, employment, and social insurance.

HUNGARY.—Statisztikai Hivatal. *Gazdaságstatisztikai adatok, 1926–1932.* Budapest, 1932. 104 pp., charts. (In Hungarian and French.)

Contains data on social insurance, public employment service, unemployment, prices and cost of living, labor organizations, etc.

INDO-CHINA, FRENCH.—Inspection Générale du Travail. *Compte-rendu sur le fonctionnement de l'inspection générale du travail, 1931-32.* Hanoi, 1932. 24 pp.

A report of the labor inspection service in French Indo-China for the year 1931-32. The service deals with the regulation of labor contracts, industrial accidents, conciliation and arbitration of labor disputes, and placement of unemployed workers.

INTERNATIONAL LABOR OFFICE.—*International Labor Conference, sixteenth session, Geneva, 1932. Record of proceedings.* Geneva, 1932. lxiii, 1003 pp. (World Peace Foundation, Boston, American agent.)

This volume of the proceedings of the International Labor Conference held at Geneva, April 12-30, 1932, contains in addition to the reports of the sessions lists of the members of delegations and of the various committees, the resolutions submitted to the conference, the annual reports of the different countries, and the resolutions and draft conventions and recommendations adopted by the conference.

— *Methods of providing rest and alternation of shifts in automatic sheet-glass works.* (Fourth item on agenda of International Labor Conference, seventeenth session, Geneva, 1933, first discussion.) Geneva, 1933. 68 pp., charts. (World Peace Foundation, Boston, American agent.)

Report of a general survey of the present systems of regulating the methods of providing rest and the alternation of shifts in automatic sheet-glass works in various countries. This information was brought together for use in the next session of the International Labor Conference, the question of rest periods and alternation of shifts in this industry being on the agenda of the conference.

— *Studies and Reports, Series A, No. 36: Industrial relations in Great Britain,* by J. H. Richardson. Geneva, 1933. 272 pp. (World Peace Foundation, Boston, American agent.)

This is the first of a series of monographs which the International Labor Office plans to publish, dealing with the progress of industrial relations in various countries since the close of the World War. Beginning with a general outline of the social and economic background in Great Britain at the close of the war, the author takes up a study first of the trade-union movement, then of the development of employers' organizations, and devotes a chapter to methods of negotiation between the two groups of organizations. This is followed by a discussion of methods intended to promote good relations between employers and workers, dealing with such subjects as works councils, developments in the line of industrial welfare movements, progressive methods of labor management, and cooperation in national economic councils. Appendixes contain a brief bibliography, comparative hours and wages in various industries in 1914 and 1931, trade-union membership at various dates, a list of industrial disputes involving stoppages of work from 1905 to 1931, the constitution and functions of typical works councils, etc.

— *Studies and Reports, Series M, No. 9: Noncontributory pensions.* Geneva, 1933. 140 pp. (World Peace Foundation, Boston, American agent.)

A study of the noncontributory pension systems for the aged, invalids, and the blind, and for mothers, which are in force in different countries, dealing with the risks covered, conditions qualifying for the receipt of benefit, the laws relating to the computation of pension, and the financial resources and methods of administration of the various pension systems.

— *Unemployment insurance and various forms of relief for the unemployed.* (Third item on agenda of International Labor Conference, seventeenth session, Geneva, 1933, first discussion.) Geneva, 1933. 299 pp. (World Peace Foundation, Boston, American agent.)

NEW SOUTH WALES.—Department of Labor and Industry. *Report on the working of the factories and shops act, 1912, during the year 1931.* Sydney, 1933. 26 pp.

NORWAY.—Statistiske Centralbyrå. *Norges bergverksdrift, 1931.* Oslo, 1932. 39 pp.

Annual report on the mining industry in Norway for the fiscal year 1930, including statistics on number of workers employed and their wages.

QUEENSLAND (AUSTRALIA).—Department of Labor. *Report of the director of labor and chief inspector of factories and shops for year ended June 30, 1932.* Brisbane, 1932. 55 pp.

SPAIN.—Ministère du Travail et de la Prévoyance Sociale. *Oeuvre réalisée depuis la proclamation de la République jusqu'au 8 Septembre 1932.* Madrid, [1932?]. 174 pp. (In French.)

This report reviews the work of the Spanish Ministry of Labor since its creation in 1920 up to September, 1932, and compares its method of organization under the Republic with that of the former régime. All official orders issued since April, 1931, are given and the principal labor laws are discussed.

UNION OF SOUTH AFRICA.—Unemployment Investigation Committee. *Report.* Pretoria, 1932. 52 pp.

Reviewed in this issue.

WARSAW (POLAND).—Magistrat. *Prace Wydziału Statystycznego. Budżety rodzin robotniczych W Warszawie, w latach 1927-1929.* Warsaw, 1932. 18*, 58 pp.

Report of an investigation of the budgets of workers' families during the years 1927-1929 in the city of Warsaw.

Unofficial

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE. *The Annals, Volume 164: Palestine—a decade of development.* Philadelphia, November, 1932. 283 pp.

Discusses Government, politics, economic problems, education, and social questions in Palestine. In addition to the material on Palestine, the volume includes a monograph on the French social insurance act.

CAMPBELL, C. DOUGLAS. *British railways in boom and depression.* London, P. S. King & Son (Ltd.), 1932. 125 pp.

A summary of a much longer work, not yet published. The purpose is not only to analyze the present situation, but to trace the relation of the trade fluctuations to the profits, wages, and general level of railway charges both before and since the adoption of the railways act of 1921.

CANADIAN COUNCIL ON CHILD AND FAMILY WELFARE. *Publication No. 62: "In times like these." Suggestions for the organization of community welfare and relief services, especially those dealing with the unemployed man and his family.* Ottawa, 1932. 46 pp.

— — — *Supplement A: The actual provision of relief (food, clothing, fuel, shelter, etc.).* Ottawa, 1932. 28 pp.

— — — *Supplement B: The organization of special services for problems of particular type—homeless men, unemployed women, ex-service men.* Ottawa, 1932. 21 pp.

— — — *Supplement C: The organization of relief work programs (in coordination with the social work program).* Ottawa, 1932. 10 pp.

CARLTON, FRANK TRACY. *Labor problems.* New York, etc., D. C. Heath & Co., 1933. 458 pp.

As stated in the preface to this volume, "it is the purpose of the writer to present to the student of industrial relations and to the general reader a straightforward study of the forces involved in what are commonly called labor problems.

The aim is not to justify or to condemn the practices and ideals of organized labor, of shop committees, or of employers and employers' associations; it is to analyze the phenomena of which the practices and ideals are the visible manifestations."

CONFEDERAZIONE GENERALE FASCISTA DELL'INDUSTRIA ITALIANA. *Annuario, 1931-32. Rome, 1932. 1263 pp.*

DOWNER, BENJAMIN J. *Consequences of uncontrolled immigration. East Orange, N. J., 380 Main Street, 1932. 8 pp.*

Favors the compulsory registration of aliens.

ENGINEERING SOCIETIES OF BOSTON AND EMERGENCY PLANNING AND RESEARCH BUREAU (INC.). *Unemployment relief funds for public works. Boston, 1933. 18 pp.*

A plan for the use of unemployment-relief funds for work on projects of a permanent character.

FABIAN SOCIETY. *Fabian Tract No. 239: Currency, credit, and the unemployment crisis, by Gilbert Slater. London, 11 Dartmouth Street, Westminster, 1932. 15 pp.*

FOREMAN, CLARENCE J. *Rent liens and public welfare: An economic and legal adjustment of industry. New York, Macmillan Co., 1932. 207 pp. (Land Economics Series, edited by Richard T. Ely.)*

FREDERICK, J. GEORGE. *For and against technocracy. New York, Business Bourse, 1933. 278 pp., charts.*

— *Readings in economic planning: The backgrounds, the details, the tendencies in all kinds of planning, left and right. New York, Business Bourse, 1932. 359 pp., charts.*

GEWERKSCHAFTSBUND DER ANGESTELLTEN. *Die Kommende Angestellten-Generation. Berlin, 1933. 143 pp., charts.*

Deals with the coming generation of salaried employees and officials ("white-collar workers") in Germany, including information on education and apprenticeship, working hours and earnings, etc.

GILSON, MARY B. *Unemployment insurance. Chicago, University of Chicago Press, 1933. 30 pp.*

A review of the arguments for and against unemployment insurance with particular reference to the operations of the British unemployment-insurance system. The author favors the adoption of such a system by the different States.

GOODRICH CO., B. F. *Industrial cooperative gardening: The story of a cooperative farm plan sponsored by the B. F. Goodrich Co. Akron, Ohio [1932?]. 19 pp., illus.*

Reviewed in this issue.

INTERNATIONAL INSTITUTE OF INTELLECTUAL COOPERATION. *A record of a first international study conference on the State and economic life with special reference to international economic and political relations, held at Milan on May 23-27, 1932, and organized by the International Institute of Intellectual Cooperation in collaboration with the Italian National Committee of Intellectual Cooperation. Paris I, 2 rue de Montpensier, Palais Royal, 1932. 185 pp.*

LANDSORGANISATIONEN I SVERGE. *Berättelse verksamhet år 1931. Stockholm, 1932. 272 pp., charts.*

A report on the organization and activities of labor unions in Sweden.

LANDSORGANISATIONENS SKOLA. *Förvaltningsnämndens berättelse över verksamheten år 1929. Stockholm, 1929. 30 pp.*

Annual report on the labor-union schools in Sweden for the fiscal year 1929, covering 24 schools and their organizations and programs.

LEWIS, CHARLES F. *A moderate rental housing project [Buhl Foundation] in Pittsburgh. 20 pp., diagrams, illus. (Reprinted from The Architectural Record, vol. 70, No. 4, October, 1931.)*

MAINZER, RICHARD. *Betrieb und Betriebszugehörigkeit*. Weimar, 1933. 86 pp. (*Schriften des Instituts für Arbeitsrecht an der Universität Leipzig*, 31. Heft.)

Deals with legislation relating to industrial establishments and their personnel in Germany, including laws dealing with trade agreements, labor protection, social insurance, and works councils.

METROPOLITAN LIFE INSURANCE CO. *Social Insurance Monograph 8: British experience with unemployment insurance. Part 2, Extent and character of the British unemployment problem*. New York, [1932?]. 50 pp., charts.

— *Social Insurance Monograph 9: British experience with unemployment insurance. Part 3, The provisions of the acts (scope, contributions, and benefits, and conditions for benefits)*. New York, [1932?]. 78 pp.

These two monographs are summarized from evidence presented before the Royal Commission on Unemployment Insurance. Part 2 gives a general view of the present employment situation in Great Britain, while Part 3 presents, in a concise and usable form, the more important features of the unemployment-insurance system.

— Policyholders Service Bureau. *Methods of organizing and conducting industrial safety contests*. New York, [1932?]. 20 pp., illus.

Analyzes practices and programs of representative industrial firms in connection with safety educational work and safety contests.

MINNESOTA, UNIVERSITY OF. Employment Stabilization Research Institute. *A new plan for unemployment reserves*, by Alvin H. Hansen and Merrill G. Murray. Minneapolis, 1933. 75 pp.

The system of unemployment reserves outlined in this report is planned to meet the problem of prolonged unemployment. In formulating the plan, the results of the operation of the various existing unemployment-insurance systems were considered and data on employment conditions in Minnesota in recent years were used as a basis for determining the measure in which such a system would meet the strain of a severe period of unemployment.

NATIONAL CONFERENCE OF SOCIAL WORK. *Proceedings at the fifty-ninth annual session, held in Philadelphia, Pa., May 15-21, 1932*. Chicago, University of Chicago Press, 1933. 694 pp.

The main subjects of division 5 of the conference program, which was devoted to industrial and economic problems, were the family, unemployment insurance, mental hygiene in hard times, and social and economic planning.

NATIONAL INDUSTRIAL CONFERENCE BOARD (Inc.). *Essentials of a program of unemployment reserves*. New York, 247 Park Avenue, 1933. 68 pp.

This study does not deal with the problem of unemployment in general but is limited to a consideration of the fundamentals or basic principles of a system of unemployment reserves. The system outlined is intended to be sufficiently flexible to be adapted to the needs of individual employers.

— *Unemployment insurance and relief in Germany*. New York, 247 Park Avenue, 1932. 107 pp., charts.

Gives the general provisions of the original law and the subsequent amendments, together with an account of the changes in the system as a result of economic conditions which have resulted in a shift toward the substitution of welfare relief in place of the unemployment insurance.

NATIONAL MUNICIPAL LEAGUE. *Elements of a low-cost housing law and its administration*, by Charles S. Ascher. New York, 309 East Thirty-fourth Street, 1933. (*Supplement to the National Municipal Review*, February, 1933, pp. 85-113.)

OHIO STATE UNIVERSITY. College of Commerce and Administration. Bureau of Business Research. *Miscellaneous Studies, X-37: Distribution of expenditures and a cost of living index for a professional group*, by A. E. Chandler. Columbus, 1932. 19 pp., charts. (Mimeographed.)

Data on expenditures secured from faculty members of 27 State-supported colleges and universities with a student enrollment of 2,000 in the academic year 1925-26.

PARRISH, WAYNE W. *An outline of technocracy*. New York, Farrar & Rinehart (Inc.), 1933. 242 pp.

PENNSYLVANIA, UNIVERSITY OF. Wharton School of Finance and Commerce. Industrial Research Department. *Special Report No. 5: Family conditions in Philadelphia, May, 1932*. Philadelphia, 1933. 13 pp. (Mimeographed.)

Reviewed in this issue.

PHELPS, EDITH M., Editor. *Debate index, also bibliographies on interscholastic athletics, compulsory arbitration of industrial disputes, a new liberal party, government ownership of hydroelectric power*. New York, H. W. Wilson Co., 1932. 144 pp. (The Reference Shelf, Vol. VIII, No. 5.)

PITKIN, WALTER B. *The consumer, his nature and his changing habits*. New York and London, McGraw-Hill Book Co. (Inc.), 1932. 421 pp., diagrams.

An analysis of the needs and buying habits of consumers, drawing attention to the fact that production has become a highly developed technology while little attention has been given to consumption.

RAYMOND, ALLEN. *What is technocracy?* New York and London, McGraw-Hill Book Co. (Inc.), 1933. 180 pp.

SCOTT, HOWARD, AND OTHERS. *Introduction to technocracy*. New York, John Day Co. (Inc.), 1933. 61 pp.

SUTCH, WILLIAM BALL. *Price fixing in New Zealand*. New York, Columbia University Press, 1932. 165 pp.

A thesis presented as part of the work required for the doctor's degree, dealing with Government control of prices in New Zealand during the war period, with some consideration of the effectiveness of the methods used and of how far they might be expected to meet with success under less abnormal conditions.

WILSON, F. M. HUNTINGTON. *Money and the price level*. New York, Century Co., 1932. 222 pp.

ZEUTHEN, F. *Socialforsikring i andre lande*. [Copenhagen, 1930?] 20 pp. (Særtryk af Socialt Tidsskrift, VI. aargang 1930, Hefte 7-8.)

A short review of social-insurance systems in foreign countries.
